2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish**; the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher **reverses automatically**, turning the clothes back and forth through the hot soap-suds, and cleaning them **without rubbing** them to pieces.
4.—This washer is made by **experienced mechanics**, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

A $2 Advertising Course

Learn to Earn $20 to $100 Weekly.

I am making a remarkable offer to business men who want to improve their own advertising, and to those who want to learn a congenial and very profitable profession, but are not convinced of their ability to succeed at it, or who are not sure which course to take.

Send me $2 and I will give you four weeks' trial instruction. That will show you just how good my course is, and how valuable it may be to you.

If you decide to continue, and I believe you will, the $2 will be credited to your account.

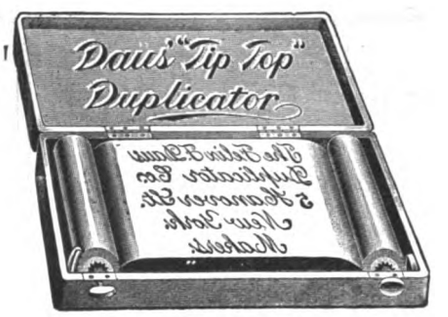
I **wouldn't** make this offer unless I honestly meant to help you.

I **couldn't** make it unless I really did do for my students the things I promise.

I am a specialist in advertising.

For seventeen years I have been building business for some of the largest advertisers in the world. Regal Shoes, Heinz Pickles, Studebaker Wagons, Jenkinson Stogies, R & G Corsets, and a host of others have been numbered among my clients.

My course is practical not only because it is based on my wide experience, but also because it is backed up by an actual advertising business.



Look up the rating of the Bates Advertising Company, and then send $2. Anyway send stamp for my handsome 66-page prospectus.

CHARLES AUSTIN BATES,

28 Spruce St., N. Y. City.

HARDWARE

We are indebted to Henry Disston & Sons, Inc., Philadelphia, Pa., for one of the handsomely blued saw edge paper cutters which they were distributing among the Southern Hardware Jobbers at the Atlanta Convention. Accompanying this acceptable souvenir is a card of instruction that says: "In using the saw edge of paper cutter, lay the bevelled edge next to paper and hold the cutter inclined at an angle of about thirty degrees. Put a slight pressure on the edge of cutter, and with a quick upward pull on the paper the toothed edge will be reproduced."

♣

Under the head of "A Boquet from Indiana," the Minnesota Retail Hardware Dealers' Mutual Insurance Company are sending out a leaflet from which we take the following letter:

NEWBERRY, IND., May 10, '04.

M. S. Mathews, Secretary, Retail Hardware Dealers' M. Fire Ins. Company, Minneapolis, Minn.

DEAR SIR: Your draft for $1,485 came to-day. Please accept my thanks for your promptness. There were three other stores burned out at the same time. The proprietors expressed their sympathy for me, as I was the heaviest loser, and at the same time expressed their apprehensions that my insurance was not "solid" and that I might not get the money. Of course theirs was O. K., being in old line companies. Well, their losses have not been adjusted yet; surely the "proof of the pudding," etc.

Hoping for your success and thanking you again for your promptness and courtesy, I remain,

Yours truly, (Signed) ED. SCOTT.

No more convincing testimony can be given to show that Hardware mutual insurance as conducted by the Minnesota company certainly leads them all.

♣

The Hardware Dealers' Mutual Fire Insurance Company of Wisconsin, which was organized by members of the Wisconsin Retail Hardware Dealers' Association, have very successfully solicited the insurance of the Association's members and others. C. A. Peck, secretary, Berline, Wis., states that from April 8th to May 22d $100,000 insurance has been written. The company are prepared to write policies for from $500 to $3,000.

HARDWARE PRICES IN THE SIXTIES.

No better idea can be obtained of the "war prices" at which Hardware was sold in the Sixties than by perusing an invoice of Hardware sold at that time and comparing it with quotations of similar goods that obtain to-day. In a bill sold by a New Orleans Importing House to the predecessors of the William Henry and R. E. Bell Co., Fort Worth, Texas, and which they have had reproduced in fac simile, we find the following, among others: Band Saw Files, 3 and 4½ inch, at $1.25 and $2.25 per dozen; Pegging Awls, $2 a gross; English Butcher Knives, $3.50 a dozen; Padlocks, $3.25 a dozen; Fast Butts, 4-inch, $2.50 a dozen; 1½-inch No. 13 Screws, $1.10 a gross; Horseshoes, $12 per keg of 100 pounds; Nails, 4 and 10 penny, $8 per keg; Wood Cards, $8 per dozen. The date of invoice was October 4th, 1866, and amounted to $293.68.

WINNIPEG FAIR.

The Domininon of Canada exhibition, otherwise known as the Winnipeg Fair, will be opened on July 24 and continue till August 6 next. The Dominion government has granted the sum of $50,000 to assist in making the fair a success. All applications or requests for information must be directed to Exhibition Department of the Canadian Manufacturers' Association, Toronto, Ontario. Foreign exhibits are invited and foreign exhibitors will be accorded the same benefits, power for processes of manufacturing, exhibiting, etc., as are granted to Canadian manufacturers.

REDUCED RATES FOR FALL BUYERS.

The Merchants' Association of New York announces that the merchants reduced rates to this city for the Fall buying season have been granted. The usual special rate—a fare and one-third for the round trip—will be operative from Central Passenger Association territory on July 30-August 3 inclusive, and August 24-27 inclusive, with a thiry-day return limit, and from the Trunk Line Association section on August 20-24 inclusive, and September 3-7 inclusive, with a fifteen-day return limit.

Expressed succinctly, the first-named territory extends from the Mississippi River eastward to Buffalo, N. Y., Pittsburgh, Pa., Wheeling and Parkersburg, W. Va., south to the Ohio River, including the cities of Chicago, St. Louis, and Louisville, while the Trunk Line Association rate will apply from the States of New York, Pennsylvania, Maryland, District of Columbia, and portions of New Jersey, West Virginia and Virginia.

Eastern and Central connections having accorded the concessions noted above, The Merchants' Association of New York will now actively push for a favorable vote on its application to the Southwestern Passenger Bureau, which has jurisdiction over the roads in Texas, Indian and Oklahoma Territories, and in Missouri south of the Missouri River. The dates suggested for this territory are those which have been favorably passed upon by the Central Passenger Association, with a similar return limit.

To counteract the general business apathy usually existing during the season preceding a Presidential election, the Association intends to very extensively advertise the rates and issue literature urging merchants to come to market and showing the advantages offered to the retailer by this trade center.

AMERICAN GOODS WANTED IN ABYSSINIA.

I am in receipt of a letter from Goolamally M. Mohamedally & Co., of Harrar, Abyssinia, stating that they are now buying boots, shoes, saddlery, rifles, revolvers and swords, camp furniture, jams, pickles, biscuits, candy, table salt, corrugated sheet iron, round iron disks, wire nails, wrought iron nails, sheet tin, and screws from England; enameled iron ware, glass ware, perfumery, knives, and beads from Germany. They request me to have sent to them immediately prices and information in regard to these articles. Prices should be quoted c. i. f. Djibouti, French Somaliland. I have a very similar letter from Ohannes Assadourian, Addis-Ababa, Abyssinia. Mr. Assadourian is particularly interested in guns, and suggests that rifles of the United States regular army type "might become an article of commerce in a large way." Both of the houses above mentioned have excellent financial standing.—*Robert P. Skinner, Consul-General, Marseilles, France, May* 18, 1904.

A NEW HORSESHOE.

It is reported that Captain Fitz Egger and Mr. Alfred Baumgartner, of Soleure, Swtizerland, have brought out a horseshoe in Switzerland which is attached to the hoof by means of metallic bands, instead of being nailed to it. Experiments with the invention are said to have given good results. A horse has been ridden shod by this system, and afterwards, the same animal shod in the ordinary way, driven from Soleure to Berne, and it was found that the animal was less fatigued on arriving at its destination under the new system. The Swiss Government have appointed a Commission to carry on further experiments, with a view of the adoption of the invention by the Swiss cavalry.

GRAPHITE BRUSHES.

Imperfect commutation and its accompanying sparking is an evil that never grows anything but worse. Copper brushes are much more prone to cause this than carbon, and carbon than graphite, simply because graphite brushes offer a higher resistance to self-induced, back currents in the coils, at the moment of commutation.

If graphite brushes are made of pure material and have sufficient contact area, they will reduce sparking to its minimum, and will entirely stop any increase due to increasing roughness of wearing segments.

Graphite, from its peculiar nature, puts a smooth surface and high polish on the commutator without the employment of lubricants or "compounds," and will not cause appreciable wear, even after long periods of steady use.

In our engine-room is a 100 K. W. unit that has run steadily for three years at 250 R. P. M., and ten hours a day, and its commutator is glassy-smooth, cool, and the wear scarcely detectable after this steady service.

The greatly increased and rapidly increasing sales of Dixon's Graphite Brushes bear strong witness to their superiority, on every count, to the cheaper, gritty carbon so recently thought indispensable.—G. P. H., in *Graphite.*

OBITUARY.

A. J. Phillips Co., Fenton, Mich., announce the death of the founder of the company and father of its officers, Andrew J. Phillips, who departed this life Tuesday, June 14th, aged 66.

HARDWARE

VOL. XXVIII. JUNE 25, 1904. NO. 6

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is $1.00 a year, payable in advance.

Remittances should always be made by New York Draft, Post-office or Express Money Order.

Foreign Subscriptions.—For each copy to be mailed outside the United States the Canadas, and Mexico, the price is $2.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Change of Address. Always give both your old and new address when you ask us to change your address.

The Name of your Post office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The reports of the present business being done in the sections heard from are not of the most encouraging character as far as general traffic is concerned, the hot weather necessities being the only goods seemingly in steady demand. Nothing but sanguine views, however, are expressed regarding the Fall business anticipated by the entire trade; and while conservative views prevail in regard to heaping up stock, the demand will not fail in providing the best of reasons why stocks of goods should be kept up in order to fill orders promptly for ascertained wants in regular supplies.

The prevailing condition of the crops are of a character to back up the estimated volume of the Fall business; all of the reports seem to bear evidence of the continuance of the agricultural prosperity which has prevailed for several years past. The largely increased population and high prices of the products, have encouraged the placing of a greatly extended area of production under cultivation, and there is but little doubt, unless some unforseen calamity shall shake our confidence, but what the business during the remainder of the year, while in no sense phenomenal, will sustain in volume the expectations of the not too sanguine dealer whether Jobber or Retailer.

Radical changes in prices are not notable occurrences, but few concessions are obtainable even on slowly moving commodities, and but few are apprehended other than on goods close to the raw material, as the price on the labor in the specialties now on the market is not apt to fluctuate downward from any recession of the demands of the cohorts of labor, who have obtained advantages through united organization they will undoubtedly retain.

The absence of all speculative feeling on the part of the multitude of buyers, engendered by the lateness of so much of the Spring trade and the fact that during the Fall months the active canvass on the part of the voters will absorb some of the ceaseless energy of our citizens observable every four years, will prove a factor in the trend of business activity that must be considered.

The agitation in trade circles concerning the inroads made upon the sales of the Hardware retailers by the active canvass made by Catalogue houses, deserves all of the consideration that has been given it by the assembled wisdom at our conventions of late, especially those held at Atlanta. It behooves the Jobber to give more of hope and encouragement as well as sustained support to the retail element in our industry, as otherwise his own existence may be imperiled. When catalogue houses and jobbers are placed on a par by the manufacturer, when quantity alone dictates the possible price at which goods may be purchased, it places the retailer between two extremes which bode no good to a profitable outcome, unless the Jobber divides his own profits to beat out the Catalogue competitor, and even then it may be an uphill fight for the dealer who sells the consumer. Up to the present time it has been but natural for the manufacturer not to decline accepting the large orders usually given by Catalogue distributors, the fear being always too pronounced that if he does not take them, the next manufacturer may not be so scrupulous.

GREAT GROWTH OF EXPORTS OF AGRICULTURAL IMPLEMENTS.

Exports of agricultural implements from the United States in the fiscal year about to end will amount to about twenty-five million dollars in value. This is an increase of about four millions over last year and about nine millions over the preceding year. In no class of manufactures exported has the growth been more steady and persistent than in that of agricultural implements.

The earliest year in which the value of agricultural implements exported was of sufficient importance to justify a separate statement was 1864. In that year the total value of agricultural implements exported was $611,152. In 1870 the total was one million dollars, speaking in round figures; in 1880, two and a quarter millions; in 1890, three and three-quarter millions; in 1895, five and a-half millions; in 1900, sixteen millions; in 1902, sixteen and a-quarter millions; in 1903, twenty-one millions, and in 1904, as above indicated, is likely to reach about twenty-five millions. Comparing this year's exports with those of a decade earlier, the figures in 1904 are practically five times as great as in 1894, the total for 1894 being $5,027,915.

Comparing the growth in exports of agricultural implements with that in other articles during the same period, it may be said that cars and carriages have increased from three and one-third million dollars in 1894 to a probable twelve millions in 1904; chemicals, from nearly seven and a-half millions in 1894 to a probable twelve millions in 1904; chemicals from nearly seven and a half millions in 1894 to a probable fourteen and a-half millions in 1904; scientific instruments, from one and a-half millions in 1894 to eight millions in 1904; and manufactures of leather, from fourteen millions in 1894 to approximately thirty-three millions in 1904, while agricultural implements have increased from five million dollars in 1894 to a probable twenty-five millions in 1904.

The principal foreign markets for American agricultural implements are shown in a table just prepared by the Department of Commerce and Labor through its Bureau of Statistics. It shows that of the nineteen million dollars' worth of agricultural implements exported from the United States during the ten months for which detailed figures are available, nearly ten millions went to Europe, four millions to South America, three millions to North America, one and a-half millions to Asia and Oceania, and a little over a half million dollars' worth to Africa.

Considering the exports by specific countries, Argentina is, in

Digitized by Google

1904, the largest customer, the exports thereto in the ten months of 1904 being $3,592,010, against two and a half millions in the same months of the preceding year and one and two-third millions in the corresponding months of 1902. Next in magnitude is Russia, our exports to that country in the ten months ending with April, 1904, being valued at $3,133,442, a decrease of about $300,000 as compared with the corresponding period of last year. France stands third, the exports of agricultural implements to that country in the ten months under consideration being $2,513,061, an increase of nearly a half million dollars over the same months of 1903. The other countries to which the exports of agricultural implements reached a total of one million or upwards in the ten-months period are, in the order named: United Kingdom, $1,383,978; Germany, $1,245,233; and British Australasia, $1,226,271; each of these countries showing a substantial increase over the exportations of last year.

Mowers and reapers contribute about one-half of the total exportations of agricultural implements from the United States, while plows and cultivators supply about one-sixth of the total, the remainder being made up of miscellaneous tools and implements grouped under the general term "All other agricultural implements and parts of." Exports of mowers and reapers have steadily increased, having grown from $2,372,938 in 1892 to $8,818,370 in 1902, $10,326,641 in 1903, and in the fiscal year 1904 will amount to about thirteen million dollars. Exports of plows and cultivators have also rapidly increased, having grown from $397,735 in value in 1892 to $2,791,092 in 1902 and $3,169,961 in 1903, and will be fully three and a half millions during the present year. Other agricultural implements have increased from $1,024,310 in 1892 to $4,677,278 in 1902, $7,510,020 in 1903, and a probable eight and a half millions in 1904.

The following table shows the exports of agricultural implements at quinquennial periods from 1864 to 1894 and annually from 1894 to 1904:

Year ending June 30.	Value.	Year ending June 30.	Value.
1864	$611,652	1897	$5,240,686
1869	1,037,530	1898	7,609,632
1874	3,089,753	1899	12,432,197
1879	2,933,388	1900	16,099,149
1884	3,442,767	1901	16,313,434
1889	3,623,769	1902	16,286,740
1894	5,027,915	1903	21,006,622
1895	5,413,075	1904*a*	25,000,000
1896	5,176,775		

*a*May and June estimated.

The following table shows the exports of agricultural implements, by countries, in the ten months ending with April, 1903 and 1904, respectively:

Articles and countries.	Ten months ending April 1903.	1904.
Mowers and reapers, and parts of	$7,807,409	$9,502,619
Plows and cultivators, and parts of	2,634,013	3,030,802
All other, and parts of	6,317,608	6,467,849
Total	$16,759,030	$19,001,270
Exported to—		
United Kingdom	$847,817	$1,383,978
Belgium	122,888	179,919
France	2,107,155	2,513,061
Germany	1,088,847	1,245,233
Italy	137,706	116,796
Netherlands	142,735	189,326
Russia*a*		3,133,442
Other Europe	4,133,769	1,106,315
British North America	3,085,100	2,567,219
Central American States and British Honduras	37,514	9,014
Mexico	285,726	316,886
Cuba	34,774	84,663
Other West Indies and Bermuda	5,906	9,279
Argentina	2,525,261	3,592,010
Brazil	27,745	39,130
Chile	148,655	227,354
Colombia	3,268	2,311
Venezuela	1,242	1,025
Other South America	142,458	199,230
British East Indies	22,909	53,553

Philippine Islands	3,466	26,986
Other Asia and Oceania	151,439	99,389
British Africa	769,412	584,644
All other Africa	70,866	94,236
Other countries	80	
Total	$16,759,030	$19,001,270

a Included in "Other Europe" prior to January 1, 1903.

THE PHILIPPINE GOVERNMENT EXPOSITION AT THE WORLD'S FAIR AT ST. LOUIS.

One of the most interesting educational exhibits shown at the St. Louis Exposition is that of the Philippine Exposition, which under the auspices of the United States Government was organized to show what has been done, and what is being done on the islands, and the visitors to the Exposition should not fail in giving it close and earnest attention in its every department.

It is the largest single exhibit at the Fair, with a complete organization of its own, including a department of publicity. They have now under way a special press building, equipped with desks, telephones, etc., which are at the service of the public. The Philippine Exposition combines a scientific interest for students of poltics, civilization, economics and ethnology with popular features which surpass in vital human interest any of the Oriental groups shown in other parts of the grounds.

It shows the grades in civilization from the diminutive Negrito, who is only a step removed from the "missing link," through the dog-eating and head-hunting Bontoc, and the Moro, who is now causing most of the trouble in the Islands, to the Scout, who is a regular in the United States army, and the Visayan, who weaves fabrics of great beauty. One has only to visit these natives and watch their tribal dances, to study the men and women at work, or witness a dog-feast, to realize their primitive character, and then to pass on to the constabulary—the beginning of the army of the Philippines—representatives of many tribes hostile to each other, but brought together and harmonized by the uniform they wear and the flag they salute.

FILIPINO COMMISSIONERS VISIT BRIDGEPORT.

The manufacturers of Bridgeport, Conn., entertained the Honorary Board of Filipino Commissioners to the Louisiana Purchase Exposition, Saturday and Sunday, 18th and 19th inst., the whole city took part in giving its honored guests a perfect conception of its industrial resources and also included an adequate idea of New England hospitality. The most important feature of the visit was an exposition of the manufactured products of Bridgeport's factories. The exhibitors had only a short notice of this, but between Monday, 13th, and Saturday they arranged for an exposition worthy of their enterprise, and which gave their guests an excellent impression of what Bridgeport means in the industrial world. The whole affair was arranged by the Bridgeport Board of Trade, under the immediate direction of President Fred. Enos.

NEW ENGLAND HARDWARE DEALERS' ASSOCIATION.

The June meeting of the Executive Committee of the New Engalnd Hardware Dealers' Association was held at the Boston Merchants' Association Rooms, Tuesday, June 14th, with Vice-President Hunter presiding.

The routine business included the election of nine new members. It was urged that all retail Hardware men in New England become members, and that the trade press be asked to help spread the invitation.

An interesting discussion of the Catalogue House question brought out many facts which will, doubtless, soon annoy many New England dealers, unless action be taken. With such a move in view, the Secretary was instructed to take note of all information on the subject and report same at annual meeting for action.

The work of the National Hardware Dealers' Association was outlined and commented upon and discussed with favor, and it is quite probable the matter of affiliation with the National body will be one of the questions to be acted on at the annual meeting.

Advance plans for a rousing annual meeting in March were being made, prior to adjournment of the meetings of the association until September. A special committee will receive applications during the summer and same may be sent the Secretary.

THE CATALOGUE HOUSE QUESTION.

The following gentlemen, representing the several associations as indicated, will meet at the Hotel Jefferson, St. Louis, on the 27th inst., for the purpose of thoroughly discussing the catalogue house question in all its phases, and how in the opinion of these Committees, the several associations should work mutually to advance the interests of these divisions of the industry, and show a combined aggressive front against the evils complained of:

NATIONAL RETAIL HARDWARE DEALERS' ASSOCIATION: W. P. Bogardus, Mt. Vernon, Ohio; E. M. Bush, Evansville, Ind.; T. Frank Ireland, Belding, Mich.; S. R. Miles, Mason City, Iowa; M. L. Corey, Argus, Ind.

SOUTHERN HARDWARE JOBBERS' ASSOCIATION: R. M. Dudley, Nashville, Tenn.

NATIONAL HARDWARE ASSOCIATION: Samuel A. Bigelow, Boston, Mass.; S. Norvell, St. Louis, Mo.; T. James Fernley, Philadelphia, Pa.; R. A. Kirk, S. Paul, Minn.; W. S. Wright, Omaha, Neb.

More representative committees could scarcely have been selected, and from the acknowledged ability of each of the members to evolve some successful plan of operation, the trade will await with eagerness the result of their deliberations.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

Gift Ineffective Without Delivery.

Question: A relative of mine died recently and a few days before his death he said to a cousin with whom he lived, "I want you to have all the money on deposit to my credit in the "X" Bank, and give it to you." Nothing more was done and his administrator obtained possession of his bank book, which shows a balance of $500. There was one witness to his gift. Must the administrator pay over the money?

Answer: The law recognizes two classes of gifts. Those made between living persons and those made in contemplation of death. The latter class are referred to as gifts *causa mortis*. In order that a gift *causa mortis* shall be valid, three things are absolutely essential. First, the gift must have been made in contemplation of death. Second, the person making it must subsequently have died. And third, there must have been a delivery of the thing given. Delivery is absolutely essential to the validity of such a gift. In this case it does not appear that the donor transferred or delivered the bank book to the donee or did anything equivalent to a delivery. Under these circumstances what he did was simply to attempt to make a testamentary disposition of his property without complying with the statutory requirement for the execution of wills. There never was, therefore, any valid, legal gift of the money in the bank. Some States permit a person in immediate danger of death to make an oral or non-cupative will; but so far as we know, no state allows such a disposition of property to be proved by only a single witness. Regarded either as a gift or as a will, his declaration failed to accomplish its purpose and the administrator is entitled to retain the money.

Corporations—Right to Remove Directors.

Question: I am a member of the board of directors of a corporation. We have a director who is also employed as an agent of the corporation at a salary and has been guilty of misconduct which we think is of such a character as to render his further connection with our corporation undesirable. Please advise us what steps we can take to remove him?

Reply: So far as concerns his functions as agent or employee of the corporation the rule is very simple. The body which appointed him may for good and sufficient cause remove him at any time in the same manner as a natural person might terminate a contract of employment when the agent or servant is guilty of misconduct warranting such action. In respect of his duties as a Director, unless there is some statutory provision or by-law allowing the removal of directors before the expiration of their period of office, it would seem that you could do no more than request his resignation and in case it is refused, have no power to remove him. Corporations chartered under the laws of New York may have their directors removed for misconduct by a form of procedure provided for in a recent statute, for the details of which the Revised Statutes may be consulted. In the absence of such a statute or a by-law, there would seem to be no power to remove directors before the expiration of their term of office. To meet this situation it is customary to insert in the by-laws or in the charter or certificate of incorporation a provision that directors may be removed at any time for cause on notice by the body appointing them.

Attachment—Life Insurance Policy.

Question: A resident of the State of New York died recently owing me a debt. His wife, who is now a resident of New Jersey, is also indebted to me in a considerable sum of money. The only assets which he left consist of a life insurance policy, payable to his wife. Is it possible for me to attach the proceeds of this policy?

Answer: An attachment can be obtained in the State of New York only where the debtor is a non-resident or a foreign corporation or conceals himself with intent to defraud his creditors or on some one of the similar grounds prescribed by our Code of Civil Procedure. Inasmuch as the wife's claim to the proceeds of the policy has matured by reason of her husband's death, you can by reason of the wife's non-residence, attach the proceeds of the policy in the hands of the insurance company before they are paid over to her in an action against her to recover on her own indebtedness to you. It would be otherwise if the action were brought against her before his death, because until the policy has matured by the death of the insured, the beneficiary has no attachable or assignable interest therein. So far as concerns your claim against the deceased, the New York Statute provides that insurance taken out by a husband in favor of his wife, shall be exempt from the claims of his creditors to an amount equal to that purchased by an annual premium of $500.

Land—Sale—Wife—Contract.

The Supreme Court of Iowa held, in the recent case of Meylink vs. Rhea et al., that where a wife told her husband to go ahead and make a sale of their land on such terms as he thought best, she was bound by his contract.

Contract—Time—Delay—Damages.

The Supreme Court of Indiana held, in the recent case of O'Brien vs. Higley, et al., that a previous oral statement by a party to a contract that he would require no security became noneffective upon the execution of a written contract stipulating for security as all prior oral stipulations and negotiations merged in the writing; that where shipments were to begin "about" October 20 and the purchaser did not give the security required of him until October 27, and received without objection the first shipment made November 1, and there was nothing in the contract or the actions of the parties indicating that time was of the essence of the contract, no damages could be recovered for delay in beginning shipments, and that one who accepted bricks shipped to him under a sale by sample, hauled them and laid them, and then had to take up and replace them because they were not the proper size and shape, could not recover the cost of hauling and laying them from the seller, but should have rejected the defective bricks at the railroad station.

EXPORTS OF MANUFACTURES A RECORD.

Exports of manufactures in the fiscal year which ends with this month seem likely to exceed those of any preceding year. Ten months' figures just presented by the Department of Commerce and Labor through its bureau of statistics exceed those for the corresponding period of any preceding year. The fiscal year 1900 was the banner year in exports of manufactures, but the figures of ten months' exports of manufactures in the fiscal year 1904 exceed by nineteen million dollars those for the corresponding months of the fiscal year 1900. The total value of manufactures exported in the ten months ending with April, 1904, was $371,712,301, against $352,671,206 in the same period of the fiscal year 1900, which, as already indicated, made the highest record of manufactures exported prior to the fiscal year 1904.

The fact that the present fiscal year has only two months' record to make and is nineteen millions ahead of the highest figure for the corresponding period in any preceding year (1900) seems to justify the prediction that the exports of manufactures in 1904 will be greater than those of any earlier year. The total value of manufactures exported in the full fiscal year 1900 was $433,851,756. Should the present excess of 1904 over 1900 continue during the remaining two months of the year it would bring the grand total of exports of manufactures up to $450,000,000.

Imports of manufacturers' raw materials also make a very satisfactory showing the grand total of "articles in a crude condition which enter into the various processes of domestic manufacture" being in the ten months ending with April, 1904, $267,334,221, against $275,641,687 in the ten months of last year, and $273,799,650 in the corresponding months of 1902.

Exports of manufactures have more than doubled since 1894, and imports of manufactuers' raw materials have considerably more than doubled since that time.

A FEW POPULAR DELUSIONS.

That the only men who really work are those who work with their hands.

That only those who began life by working for somebody at $25 a year win ultimate wealth.

That because a man's wants are few there is no reason why he should earn more than $1.50 a day.

That a three-hundred dollar piano looks well in a room carpeted at a cost of 60 cents a yard.

That only those are bigots who fail to see things in the same light that you utilize.

That a crush hat and a cape-coat covering a spike-tail coat and low-cut vest are worn only by gentlemen.

That all plumbers are thieves and that frozen water pipes and wrecked water backs are their sole delight.

That the only really successful political workers are those who occupy seats upon the speakers' platform.

That all traveling salesmen who are successful would fail in any other occupation.

That any principle of law, justice or humanity authorizes one man to dictate as to another man's work.

That the influence of any one or all members of any "Smart Set" on earth has any force except in the direction of vanity, selfishness and degeneracy.

That there are any qualities more helpful to the general welfare than those of rectitude, kindness, generosity, industry and thrift. —*Michigan Trade.*

RECENT TRADE PUBLICATIONS.

LEATHER & BRASS MFG. CO., Auburn, N. Y., are sending out their catalogue No. 7, embracing Air Compressors which are manufactured by them and are adapted for any purpose requiring a volume of pressure of air not greater than given in the description, and the construction is such, they claim, that the greatest efficiency is obtained with the smallest expenditure of power. They are compact and simple in construction, and every working part may be removed without disturbing an air joint. Their valves, they state, do not heat, and water jackets are unnecessary. The company are so confident that their compressors will give perfect satisfaction that they will allow the privilege of returning at their expense within ten days after receipt if not satisfactory. Above booklet will be mailed upon request.

JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J., have recently sent out a large circular which folds envelope size and is descriptive of their Graphite Motor Chain Compound, intended to advance the proper care of driving chains, which is a matter of the utmost importance in order to secure the greatest efficiency for chain-driven automobiles. The following advantages are claimed: It lubricates every wearing surface; it prevents rust; it almost wholly ends wearing of the rolls and pivots; it does not gather dust and grit; it is not squeezed out, and it gives most excellent satisfaction. In the above mentioned circular full directions for its use are given. The same company have also issued a very neat envelope size pamphlet on "Wire Rope Lubrication," containing remarks upon the proper care of elevating and transmission ropes, with special reference to Dixon's Handy Graphite Rope Dressing.

THE CHICAGO FLEXIBLE SHAFT COMPANY, La Salle Avenue and Ontario Street, Chicago, Ill., under the head of "Some Sheep Shearing Suggestions," by the champion sheep shearer of the world, have issued an instructive pamphlet showing how to shear a sheep so as to save time, save wool, save labor and save the sheep. They claim that the sheep shearing machine which they make, will save from one to two pounds of wool to every sheep; and the best of fleece, that next to the skin. This is certainly an item worth considering. They also state that their machine pays for itself in the first sixty sheep shorn, not only in wool, but in saving of expert labor, though they state that all champions use them, since any handy man can get good results at once if he follows the suggestions laid out by Mr. Marquite in the above mentioned book. The suggestions are illustrated showing position of sheep and operator from the beginning of the operation to the returning of the sheep to the pen. Incidentally, their machine leaves a smooth, even skin, so that next year's growth comes with an even top, and this feature is worth something too. Send for this pamphlet, if you are interested, also for their catalogue, which the company will be glad to furnish.

NATIONAL METAL EDGE BOX COMPANY, Readsboro, Vt., and 619 623 Cherry Street, Philadelphia, manufacturers of metal edge paper boxes, paper box machinery, box boards and box blanks, are distributing an attractive catalogue of sixteen pages, exploiting their products. Their metal edge paper boxes they furnish either made complete, or cut, scored and cornered ready to set up. "You apply the metal corner; this can be done as boxes are required, giving the advantage of storing in the flat, enabling you always to have a stock on hand for an emergency." The machines for applying the metal corners are very simple in construction and easily operated, not necessitating experienced help. The metal strips are furnished in two designs: one in twenty-inch lengths, to be used in hand fed machines; the other in reels of three hundred feet, to be used in automatic machines. The book contains illustrations, descriptions and list prices and may be had for the asking.

THE NICKEL PLATE STOVE POLISH COMPANY, 459-461 Illinois Street, Chicago, Ill., are the authors of a neat envelope size pamphlet catalogue in which, among other articles of their manufacture, they exploit their Wizard Metal Polish, which is put up in liquid form only, in cans that are guaranteed not to leak; also they exploit their Russian Asbestos Cement (furnace or retort), which has excellent qualities in use for mounting and packing joints and seams in furnaces, heaters, ranges and stoves, making them gas tight. This cement is composed of asbestos materials and is fire and acid proof; it hardens quickly and adheres firmly to anything, and is put up in 1, 2, 5, 10 and 25 lb. cans and 100 lb. tubs and also in barrels. Booklet giving further information regarding all of their products can be had upon application to above address.

CHARLES E. MILLER, 97-101 Reade Street, New York, manufacturer, jobber, exporter and importer, has issued a 1904 automobile catalogue No. 6, and price list of automobile, motor boat, motor cycle and bicycle parts, fittings, sundries, tools, clothing, American and European novelties, etc., etc., of which they claim to carry in stock the largest assortment to be found in this country. They state they are rapidly developing their automobile supply business, so that, by constantly being on the look-out for novelties and supplies, they are occupying that position in the automobile world which they have for so long held in the Bicycle world. Branch houses are being opened to enable them to keep pace with the growth for this famous pastime, and to enable the public to depend upon them for obtaining everything new, good and moderate in price. Their axiom is: "We either carry it in stock, will get it, or it isn't made." Send for one of the above illustrated catalogues.

FAIRBANKS, MORSE & COMPANY, Franklin and Monroe Streets, Chicago, Ill., have recently forwarded us one of their latest pumping machinery catalogues, No. 480, which is a fine specimen of the printer's art, and represents consistent and marked improvement and advances in pump design. They illustrate in this catalogue only those lines for which there is the most frequent demands, it being impossible to mention all the different sizes and types they are prepared to furnish. Instructions as to ordering repairs and directions for setting up and running pumps is given. The Company request that in ordering goods, customers adhere to the following rules: State for what purpose the pump is used; the maximum quantity to be pumped per minute or hour; to what height the liquid is to be lifted by suction; the diameter and length of suction pipe and number of elbows; to what height or against what pressure the liquid is to be discharged, also the diameter and length of discharge pipe: the steam pressure available at the pump; whether the liquid to be pumped is hot or cold, salt or fresh, acid, clear or gritty; and, will the pump exhaust into the atmosphere, into a condenser or against a back pressure, and if the latter, state how much. The book contains information of much interest for those interested in steam pumps and will be mailed upon application.

THE BRAINARD MANUFACTURING COMPANY, Despatch, N. Y., have issued a 1904 catalogue embracing their line of brass, bronze and steel Hardware. They solicit orders for special goods in quantities made of the above metals. Their catalogue is a high-grade one, well printed on coated paper and profusely illustrated throughout. Included in the contents are hinges of every description, hinge plates, refrigerator latches, bolts, wardrobe hooks, door knobs, escutcheons, drawer pulls, box corners, brackets, moulding hooks, cleats, all styles of washers, etc., etc. They also devote a separate part of their catalogue to the exploitation of steel chest-box-trunk Hardware. The company state they want patented specialties of merit to manufacture on royalty. The above-mentioned catalogue will be found an acquisition to the catalogue library of the Hardware dealer.

THE VICTOR STAMPING COMPANY, Loveland, Ohio, have distributed an attractive folder illustrating and describing the merits of their Victor coal hod, which they state has been designed to meet the requirements of the dealer, as well as the demands of the consumer, who takes into consideration quality, capacity, price, weight of material—who want the best goods at a reasonable price. The bottom of the Victor is extra heavy, and six thicknesses of metal at the joints makes it practically indestructible; the joints of the seam, they claim, can positively not open. They state it is their aim to produce only articles of good grade; ignore the cheap, worthless kind and avoid the extreme high price goods. They solicit suggestions from every dealer coming into possession of their circular regarding style, pattern, grade or quality of any article that meets the requirements of the trade. Write for the above-mentioned circular if you are interested.

OUR BRITISH LETTER.

(*By Our Special Correspondent.*)

London, June 15, 1904.

THE GAS COOKER BUSINESS.

The combined action recently taken by the seven ironmongers in Hornsey has given rise to much comment and no little awakening among ironmongers here. The commission arrangement whereby these ironmongers act as agents for the local gas company has brought to the front the entire question of selling gas stoves and cookers. It has shown the Hardware trade in Great Britain that the greater part of the gas stove business has really gone out of their grasp—in many cases, it is feared, never to return. Where gas companies do the whole of their business on the hire system, fix stoves free of charge, and even supply gas fittings and mantles at nominal prices, there is not much chance for retailers to compete. However, every question which stirs up trade and causes discussion is worth ventilating, and it is felt that the lesson may prove profitable, and some enterprising traders may throw greater energy into the business. One of the worst traits in the character of Hardware men in this country is that so many, even up-to-date, traders are content to accept the situation in which they find themselves without any determined efforts to remedy existing evils or to remove the cause which prevents them from carrying on their business profitably.

NEXT MONTH'S IRONMONGERY EXHIBITION.

The Ironmongery Exhibition which is to be held at the Agricultural Hall, Islington, next month is likely to prove a success. I have been favored with a sight of an advance catalogue of the exhibition, and among the number of exhibitors are the names of many influential firms who know how to build up smart and attractive stands and show off their wares to the best advantage. Several of the factors who intend showing are well known for their up-to-date lines and the preponderance of goods from "over the water" in their warehouses, so there is every likelihood of the U. S. A. being to the front, and some smart American prize-winners and quick-selling goods being in evidence.

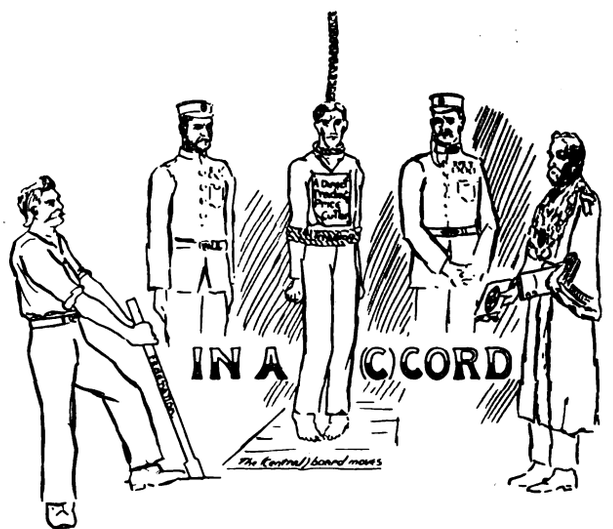
SUMMER SHOWS.

The Bath and West Agricultural Show held at Swansea a few weeks ago was a good opening to the summer show season. Plenty of American and Canadian makers had harvesting machinery on view, and poultry houses and American incubators were kept well to the front. I hope to visit the show of the R. A. S. E. at Park Royal this month, and will give your readers some account of the principal event of the year in the agricultural world in my July letter.

SEASONABLE TRADE.

Ironmongers are preparing for summer trade but the uncertain weather experienced during the past two months has prevented many from doing any satisfactory business in warm weather goods. Some of the retail ironmongers' shops in this country are looking very smart and attractive with displays of garden furniture. June and July ar egenerally the best months for the sale of out-door furniture, portable seats, bathing tents and picnic outfits, but this year there, so far, is little spirit shown in buying. As the summer advances show windows assume rather a dusty and faded look, and it is only by careful attention that a bright appearance can be kept up. American swing chairs and fancy colored hammocks are being introduced with satisfactory results everywhere. These goods not only look well when on sale but give a bright and cheerful style to the gardens in which they are used.

LOOKING UP NEGLECTED TRADE.



British ironmongers are looking up neglected business and with the assistance of local associations are doing much towards securing some of the neglected side lines which have been allowed to drop out from the Hardware trade, but which have been picked up by others. A large trade is done in sports' prizes every season; the general character of prizes given at athletic festivals, shows and competitions is on the up grade. A few years ago some very useless articles, large and showy, were given away, but committees seem to realize that winners prefer something of sterling value, and there is a demand for good silver lines, fitted cabinets, leather goods and articles of utility, as well as of ornamental types, suitable for the improvement of house and home. Silversmiths, fancy goods warehousemen and even drapers have been doing a share of this business for some years. Advertising firms, direct traders, or catalogue houses as they would be called in America, have done more than their share. Naturally much grumbling has taken place and local committees are beginning to realize that they can do just as well by buying through their local ironmongers, who are in touch with houses of good repute, the sterling value of whose articles they can rely upon. Sports' prizes form one of the neglected side lines now being looked after by ironmongers in Great Britain.

MOTORITIES.

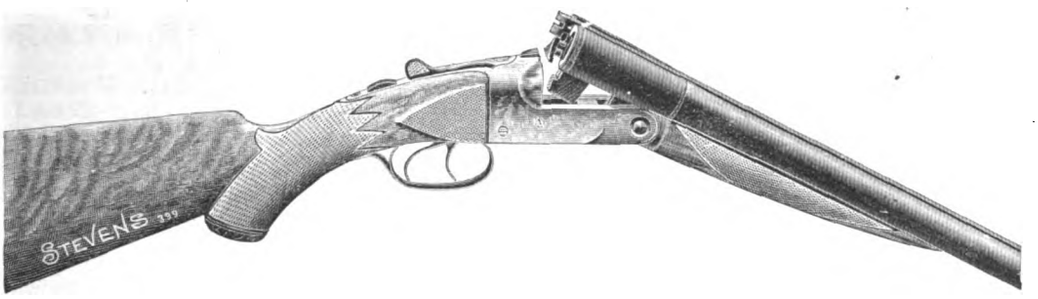
Ironmongers are asking one another the question, Why should we lose the new trade in motorities like we did cycle business years ago? The question is being answered in a practical way by many go-ahead traders, and in suitable localities it is no uncommon thing to see hanging signs and attractive boards announcing that the local ironmonger employs workmen competent to effect repairs to motor cars and motor cycles. The same traders are doing a steady business in petrol and other preparations required in the up-keep of motor vehicles and machines. Motorists are growing fastidious and must be in the fashion, ladies and gentlemen too, must have the correct clothing and possess every new fad invented; they must, in short, be in the fashion, not only in the appointment of their cars but in the accessories found useful by others. This business is being followed up and traders visiting shows are keen after buying stocks of the right thing.

THE I. F. A. IN ACCORD.

The I. F. A. are tightening their grasp upon traders who are not "in accord" with the principles laid down in the so-called

Magna Charta of the Association. At the recent Conference of the I. F. A. in Birmingham a strong feeling in favor of sticking to those traders who maintain prices was expressed, and members showed determination to kill "direct-trading and price-cutting." The cartoon herewith reproduced in reduced size appeared recently in the columns of *The Ironmongers' Chronicle*. It was the work of an amateur, but it clearly showed the trend of events, and the strong determination on the part of the officials of the Central Board of the I. F. A., that, by local associations, they could put an end to these two evils under which the retail trade suffer. The figure on the right represents the president of the I. F. A., who has taken such an active part in the promotion of the association movement in this country. The stern warders are well known officials who have the welfare of the trade at heart, and know how to conserve its interests. American associations are going strong, they are deep rooted and reports of their meetings and the first rate practical papers read by their members show energy and force. British ironmongers are following, the old country may move slowly and the roots of a fresh planted tree take time to spread, but depend upon it the I. F. A. has come to stay, and will upbuild the trade and work profitably in the interests of the traders of whom it is formed.

WHY NOT BE SATISFIED?



The average man thinks every other business better than the one in which he is engaged. Sometimes he is so sure of it that he makes a change, and then comes a discovery. He finds that the new business, which at long range looked so rosy, has a full complement of thorns, not altogether different from those which beset his old occupation. Instead of indulging in such day dreams about other people's affairs, men would make more progress by employing their spare time in nipping the thorns that annoy them.—J. K. LeBaron, in *Four Track News*.

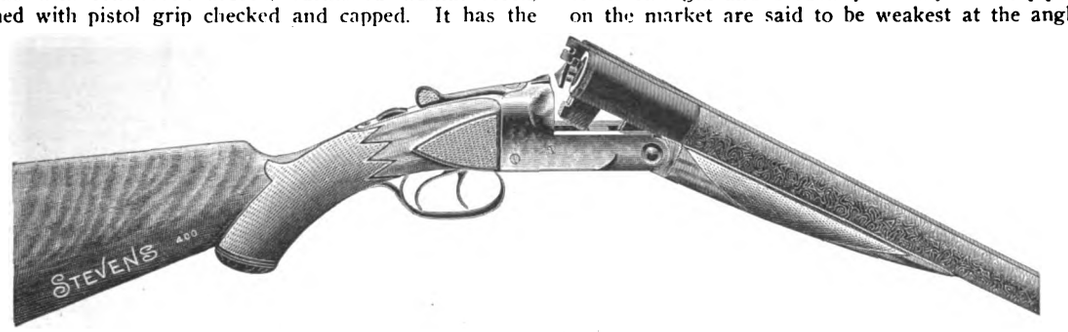
NEW GOODS AND SPECIALTIES.

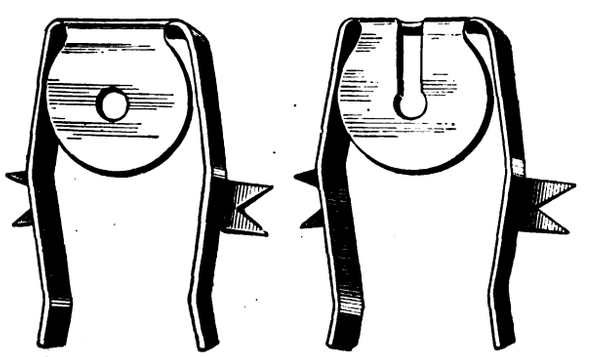


TWO NEW STEVENS' GUNS.

Among the more recent additions to the line of guns manufactured by the J. Stevens Arms & Tool Company, Chicopee Falls, Mass., we present illustrations of the latest which have been ready for delivery since the first of the month. They are made to meet the requirements for a moderate price double-barreled shotgun

NO. 350.

that embodies all the requisites of a high grade gun. The No. 350 is a double hammerless, with special "smokeless" steel choke-bored barrel, especially made for nitro-powder. It has a drop forged frame with reinforced breech, varnished walnut stock, finely finished with pistol grip checked and capped. It has the

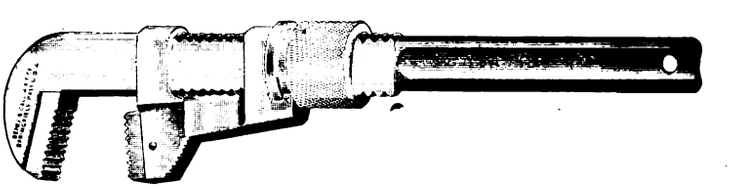


NO. 370.

Anson and Deeley type of action, with top snap, treble bolt, automatic safety, extra long frame, and all parts drop forged. It is adapted for any standard make of shell, loaded with either black or smokeless powders. No. 370 is a similar gun, but has a Damascus steel barrel. The action, stock, breech and frame are the same as the 350. They are both made in the same weights and gauges.

THE NOTAX ROLLER BRACKET.

We illustrate herewith a new and unique article for which patents have been applied for, and for which Charles M. Ghriskey's Sons, 508 Commerce Street, Philadelphia, have been appointed selling agents. It shows a new device for holding shade rollers in the runway of a window. The brackets are stamped from steel



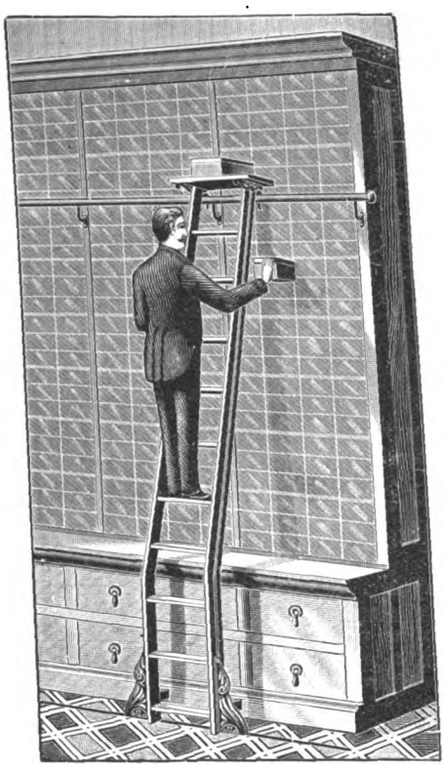
THE NOTAX ROLLER BRACKET.

and are provided with sharp projections on each side, which, when placed in position, hold the bracket firmly in the runway above the pulley. Being of spring steel, they are adjustable to any size runway and can readily be inserted or taken down by simply pressing the ends together with thumb and forefinger, no nails, screws, or tacks being necessary, as, after they are placed in position the raising of the lower sash will force them firmly in place.

THE "BEMIS" PIPE WRENCH NO. 52.

Bemis & Call, Hardware & Tool Company, Springfield, Mass., are putting on the market the improved Pipe Wrench of which an illustration is given herewith. This wrench in its construction combines the desirable features of the standard pipe wrenches now on the market and includes a number of improvements which increase its value. It consists of a one-piece forged steel bar slide with serrated steel jaw, secured by a pin and operating nut. In the construction of the wrench the first consideration was given to its strength and durability. Many of the pipe wrenches now on the market are said to be weakest at the angle of the upper jaw. This wrench is claimed to be 30 per cent. stronger at this point. In consequence of the jaws being offset from the bar, the

THE "BEMIS" PIPE WRENCH NO. 52.



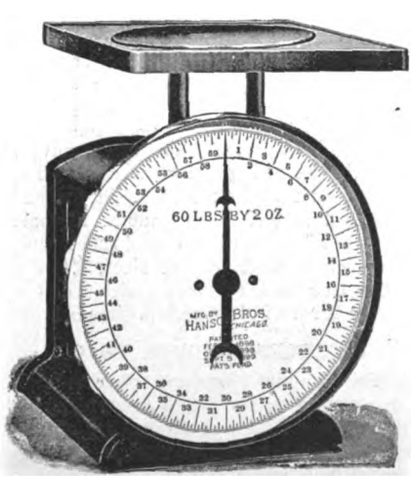
wrench can be applied and operated on a pipe located against a wall or in other confined places. Among the advantages claimed for this wrench the following are referred to: That it will not crush, slip or lock on the pipe; being built for hard usage it is made from the best materials obtainable; all parts are interchangeable so that when worn out or broken they may be replaced. The wrench is made in five sizes, 8, 10, 14, 18 and 24 inches. The first two sizes are made with wooden handles, the last three have the form of steel handle shown in the illustration.

NOISELESS LADDER TRACK.

The Bicycle Step Ladder Company, 88 Randolph Street, Chicago, Ill., with a desire to perfect their store ladder service, are constantly adding new devices and making changes to remove any objectionable features that are adversely criticised. They have experimented for a number of years with rubber tired wheels, wheels made of fibre, and other devices to do away with noise in the operation of ladders. They have found that all such devices, while meeting the requirements to some extent, are easily worn out or broken, and consequently subject their customers to continued expense for renewing these parts. They found also that when such a wheel became worn, the noise resulting from its use is worse by far than from an ordinary turned iron wheel. Their latest improvement, however, is a noiseless track which they have found to have all the advantages of the other devices, and, in addition, to have the lasting qualities of steel.

Digitized by Google

As they have subjected this track to the most severe tests, when properly installed, they have no doubt that it will, like steel track outwear any ladder made to roll over it. In shape it is the same as the half round steel rail now in use and is fastened to the

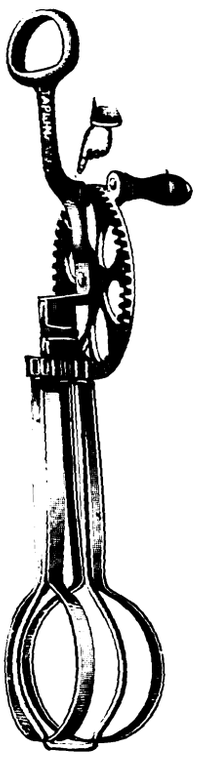


NOISELESS LADDER TRACK.

shelving or floor in the same way. When ordering it will be necessary to specify whether "Noiseless" or steel rail is desired. Where no mention is made all orders will be filled with the steel rail as before.

THE U. S. FAMILY SCALE NO. 60.

Hanson Brothers, 20 West Randolph Street, Chicago, Ill., are the manufacturers of the U. S. Family Scale, of which they make a full line, including those with top plate, as shown in our illustration, and with scoop. We show the No. 60 provided with double upright removable steel posts and 7x7 inch pressed steel top plate, one of the popular sellers in the Hardware trade, having a number of features on the strength of which the makers claim superiority of construction and practical results. These are re-

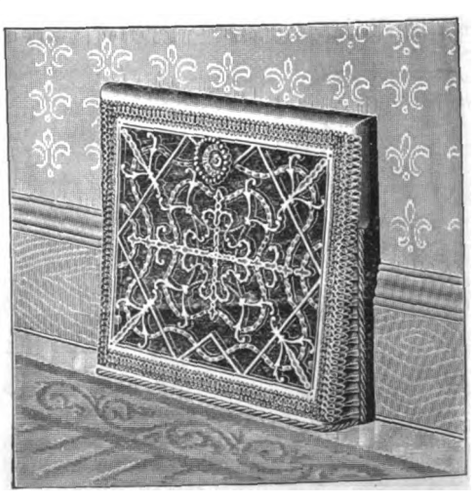


THE U. S. FAMILY SCALE NO. 60.

ferred to in the following terms: A removable steel post, claimed to be unbreakable and as protecting the weighing mechanism in handling, so that the scale reaches its destination in perfect condition. The Scale boxes are pressed from one solid piece of No. 20 cold rolled steel. A solid aluminum dial with the pounds and ounces pressed deep in the metal. Hand made oil-tempered springs, from best cast steel wire; and it is provided with a flat bottom to prevent detrimental overloading.

TAPLIN'S "DOVER PATTERN" EGG BEATERS.

The Taplin Manufacturing Co., New Britain, Conn., and 90 Chambers Street, New York, are the manufacturers of a number of salable specialties, which the up-to-date Hardware dealer should be familiar with. Among those that are quite popular is a line of Dover Pattern Egg Beaters which are shown by the illustrations herewith. The handles are all iron, and the novel bear-



TAPLIN'S "DOVER PATTERN" EGG BEATER.

ing is a feature of importance to which attention is called. Its method of construction makes the Beater work easily and rapidly. It is furnished with electro tinned handles, or they may be had in the usual finish. The Beater is supplied in a number of sizes, from the ordinary family size, both small and extra, and the larger Hotel size. The regular family size is shown in the illustration and is 10¾ inches long. They are also made in a "Mammoth" size, to be used as a beater or mixer for the use of hotels, confectioners, caterers, bakers, etc., and intended to mix with the greatest ease eggs, flour batters, melted sugars, syrups, etc. Send for their catalogue showing the entire line in full sized illustrations.

STOWELL'S SIDE WALL REGISTER.

Stowell Manufacturing & Foundry Company, South Milwaukee, Wis., are meeting with deserved success in the distribution of their Side Wall Register, illustrated herewith. The method of adjusting the shutter by a wheel is the simplest on the market,

STOWELL'S SIDE WALL REGISTER.

as it has no unnecessary projections to protrude into the room and the shutter is thrown full width with a quarter revolution. Their use avoids the cutting of carpets and differing from floor registers are not receptacles for dust or dirt of any kind.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED JUNE 7, 1904.

364,238. WEDGE FOR AXES OR OTHER TOOLS. George W. Francis, Buffalo, N. Y.

364,330. HANDLE FASTENING. Christian J. Zietinger, Gads Hill, Mo.

364,350. FISHING ROD. Adolph Huth, New York, N. Y.

364,351. FLUID CAN OR BARREL HOLDER. Gilbert K. Ingraham and John L. Crist, San Francisco, Cal.

364,353. MACHINERY FOR GRINDING CUTLERY. Richard Kampfe, Brooklyn, N. Y.

364,414. POCKET KNIFE. Carl Hollweg, Barmen, Prussia, Germany.

364,422. RATCHET BRACE. George M. Laforge, Billings, Mont.

364,462. COMBINED CARPET AND WEATHER STRIP. Dan. L. Ailyn, Bloomington, Ill.

PATENTS ISSUED JUNE 7, 1904.

761,706. SIGHT FOR FIREARMS. James J. Peard, Hartford, Ct.

761,712. BASIN WASTE. John C. Reed, Alleghany, Pa.

761,714. SAND SHIELD FOR VEHICLES. Hamilton Richardson, Townsend, Mont.

761,723. TWINE HOLDER. William Steger, Marietta, Ohio.

761,731. FLOOR HINGE. Harry J. Valentine, Cleveland, Ohio.

761,740. GATE LATCH. David Wilson, Dekalb, Ill.

761,741. HANDLE FOR SAD IRONS. Carl Winter, Chicago, Ill.

761,797. WRENCH. Frank W. Vogel, Santa Monica, Cal.

761,808. SHAVING APPARATUS. William R. Allen, Hoquiam, Wash.

761,836. CARPET SWEEPER. Walter D. Hodson, Marion, Ind.

PATENTS EXPIRED JUNE 14, 1904.

364,641. BREAD AND VEGETABLE SLICER. Louis Gathmann, Chicago, Ill.

364,672. CROSSCUT-SAW HANDLE. Christopher Richardson, Newark, N. J.

364,749. ADJUSTABLE WRENCH. Edward S. Boynton, New York, N. Y.

364,765. WRENCH. Rufus B. Marks, Newark, N. J.

364,819. PUMP FOR EMPTYING CANS. Horace L. Hauser, Minneapolis, Minn.

364,825. TUBULAR LANTERN. David C. Kline, Rochester, N. Y.

364,911. COFFEE-POT. James Edwards and Louis Ellicott, Baltimore, Md.

365,031. TRAMMEL POINT. Justus A. Traut, New Britain, Conn.

PATENTS ISSUED JUNE 14, 1904.

762,420. ADJUSTABLE WRENCH. Frank J. Leibman, Brooklyn, N. Y.

762,471. CASTER. Sigmund Dori, New York, N. Y.

762,497. NUTMEG GRATER. Frank E. Snyder, Massillon, Ohio.

762,515. MOP. Thomas W. Davies, Chicago, Ill.

762,595. SASH LOCK. Joseph H. Moskow, San Francisco, Cal.

762,677. SAW-CLAMP. Charles Bergstrom, Lindstrom, Minn.

Undeserved Gratitude.

Passenger—I want to thank the motorman, through you, for stopping this car to let me on.

Conductor—Oh, he only did it for a joke. We only go another block.—*Judge.*

PRACTICAL HINTS ON ADVERTISING.

BY

CHARLES AUSTIN BATES.

Why is it that so many advertisers who write their own copy can't get away from business technicalities? One of the greatest faults of "home made" publicity is that the man who writes it is biased. He sees his goods entirely from his own point of view. He knows his stock to the smallest detail and he is thoroughly acquainted with every technical feature. He ignores or forgets the fact that the great mass of people who read his newspaper ads, circulars and what not, have neither the time nor the inclination to go to the trouble of getting a definition for every trade term which he, the advertiser, seems to believe, must be universally known. Up to the present moment, there is no record of anyone having erred on the side of making an ad too plain, but thousands of dollars have been wasted on publicity which has been unintelligible to half the people for whom it was prepared.

There is nothing suggestive of the Black Art about advertising, in spite of the mystery with which many otherwise intelligent business men choose to surround it. Reduced to first principles, advertising is simply telling what you have, where you have it, why it is good and for how much it can be bought. The more interesting you make the description the more attention it will receive and the more goods it will sell.

"YOU SHOULD WRITE JUST AS YOU WOULD TALK."

The principal thing to remember in writing an ad, as in writing a business letter, is that in most cases it is simply the best possible substitute for a personal call on the people to whom it is addressed. Therefore, you should write just as you would talk to a visitor in your place of business. You should say just what you would say to a man or woman to whom you might be trying to sell the article advertised. You should go into details, telling all the meritorious features of your offerings, you should quote prices, and, in fact, not overlook anything that will help to convince readers that your store is the place at which to trade. Don't be content with simply telling people that your offerings are the best. Tell them why. There may have been a time when the great American public was content to accept the assurance of the advertiser that his offerings were the best obtainable. But that time is past and nowadays, people have to be "shown."

I have never yet been able to understand why it is that an apparently rational business man will go through all sorts of mental gymnastics in writing newspaper advertisements. In his business he may be dignified and reserved to a degree, but when he grasps his pen in his hand and starts in to talk about his offerings, something rises up within him and inspires him with the desire to be original and "cute." He attempts to be facetious and usually ends by being inane. He says things in cold print and to the entire community that he would never think of saying to a customer in his store or office. If he were to talk the sort of "rot" he puts into his newspaper ads, he would be looked upon as a very likely candidate for a private sanitarium. Maybe you think I am prejudiced against the man who writes his own ads, but, as a matter of fact, I am not. I leave it to your own judgment. Just take yourself into a corner some day when you are not busy and think it over. Then you will wonder why I haven't said more.

"JUST TAKE YOURSELF IN A CORNER SOME DAY."

Ever since I went into the advertising business, and maybe, before, I have been trying to find out why it is that some shrewd, substantial business men are willing ~~to buy~~ a quarter page, more or less, in their local papers, and fill it with something like this:

WATCH THIS SPACE NEXT WEEK.
SMITH & CO.

It seems to be a sort of affection of the brain which manifests itself, more especially in small towns. Time and time again I

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

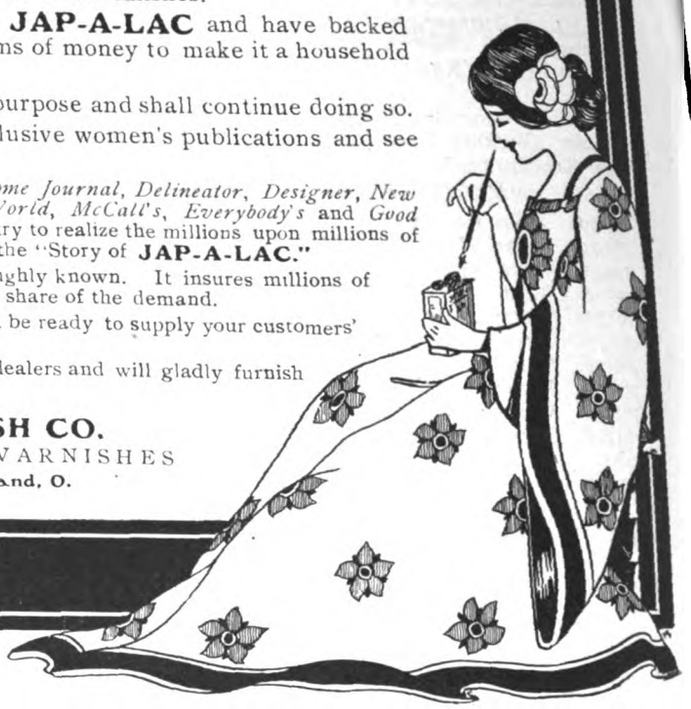
We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.



Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

have heard small retailers state most emphatically that advertising did not pay. They have used space in the local papers for years and they did just as much business without advertising as they did when they used space regularly. The only reason they ever bought space anyway was because their competitor did, and as the lesser of two evils, it seemed to be better to be in the paper than out of it. It is precisely this same type of advertiser, who, when he does use space inserts something like the legend above. Otherwise, he sends a change of copy to the newspaper on an average of twice a year. It is not at all unusual to see newspapers carrying ads of winter hats and caps in midsummer. This may sound like drawing the long bow, but I assure you it is literally true. No wonder advertising doesn't pay. Could any sane man expect it to under conditions like these?

Another thing I can't understand is that any newspaper publisher should be so indifferent to his own interests as to permit an advertiser to run the same copy day after day, week after week and month after month. But that's another story, as Kipling would say.

If you can give the people of your town just as good goods at just as attractive prices and they persist in doing their shopping in the nearest large city, what is the reason for this. I will tell you. It is because you don't tell them so. At any rate you don't tell them strongly enough to make them believe it. Now these people are not going to a neighboring city to buy goods if they can do just as well in every way at home. It isn't human nature. The fault lies with yourself. The people of your town know just what is going on in the big city stores. You can safely gamble that few advertised bargain sales pass their notice. They know in a general way just about how large a stock each big store carries in each line of goods that particularly interests them. How do they know these things?

Because the city merchants go to a lot of expense and trouble to tell them through the newspaper or by some other good method of advertising. You may have just as choice a stock of goods and your prices may be low, but if the people don't know it you won't keep them away from the city stores. They know something about these stores and most people like to know all about what they are going to buy before they buy it. They won't spend much time investigating your stock—life is too short.

AGRICULTURAL CONDITIONS IN BAHIA, BRAZIL.

(*From United States Consul Furniss, Bahia, Brazil.*)

The State of Bahai is almost entirely an agricultural State, yet there is a total lack of modern agricultural implements. The reasons for this are many, but mainly because hand labor is comparatively cheap and the laborer cannot be persuaded to use modern implements. Again, farming is chiefly done on a small scale by individuals who cannot afford to invest in more expensive implements, or at least are content with present methods.

The agricultural implements in use are a large hoe, a spade, a machete, and occasionally a pick. Such implements as cultivators, planters, harrows, and in most sections even plows are unknown. I have traveled through the greater part of this district and have never seen a plow in use. There are a few plows, which were imported, but these have been allowed to rust and decay from inability to get anyone to use them. No modern implements are exposed for sale in the stores.

There is no grain raised through this section and not sufficient grass to supply local demands, so there could be no need for reapers and similar harvesting apparatus.

FEMALE EMPLOYES IN GERMANY.

A question which during the past year was much considered was in regard to the status of the female factory employees over sixteen years of age—as to reducing their daily hours of labor from eleven hours to ten hours, the lengthening of the daily noon pause from one hour to one and one-half hours, and as to closing earlier than 5.30 o'clock on Saturdays. These changes would concern about 5,000 workwomen in the several spinneries and factories. No changes were made, however, as it was considered that a reduction in the hours of labor could not be thought of, because of the competition in such countries as Italy, China and Japan, where wages are much lower than here and the number of daily hours of labor even greater. Besides, it was declared that by making the advantages of factory life too great there would be a tendency to diminish the supply of domestic help.—*E. T. Liefeld, Consul, Dresberg, Germany.*

REVIEW OF THE MARKETS.

WIRE NAILS: A moderate business prevails in the Wire Nail market, transactions being limited to smaller quantities as the season closes, while the mills meditate closing down some of the plants. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in ten days:

Jobbers, carload lots.....$1.90
Retailers, carload lots 1.95
Retailers, less than carload lots..... 2.05

New York. The local trade is without feature, the demand being governed by the small lots required to keep assortments fairly good. Quotations are as follws:

Single carloads $2.10
Small lots from store..... 2.20

CUT NAILS. A meeting of the Cut Nail Association will take place on the 29th inst., although lower quotations are anticipated by the trade it is doubtful if any change will be made. The regular quotations remaining as previously quoted, as follows: On either Steel or Iron Nails, with no discrimination as to locality:

Jobbers' carload lots.....$1.75 base
Jobbers' less than carload lots..... 1.80
Retailers, less than carload lots..... 1.90

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.

New York. The local demand for Cut Nails is entirely normal, and stocks on hand by no means large. Promptness in getting orders filled complete, resulting therefrom. Quotations are as follows:

Carloads on dock.....$1.89½
Less than carloads on dock..... 1.97½
Small lots from store..... 2.05

BARB WIRE: As contracts are about filled, the Mills are getting in shape for new trade. Demand for immediate wants is light, and the annual overhauling of plants is in order. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.20	$2.50
Retailers, carload lots	2.25	2.55
Retailers, less than carload lots	2.35	2.65

SMOOTH FENCE WIRE: Business is extremely moderate, as is expected at this period of the year. Several of the mills contempate shutting down in July for inventory and repairs. Quotations remain as follows, f.o.b Pittsburgh, terms, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads $1.80
Retailers, carloads 1.85
Less than carloads 1.95

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

AXES: The Associated Axe Manufacturers were in session quite recently and determined upon an advance of 25 cents a dozen on prevailing quotations, to go into effect July 1st. As considerable conservatism has been shown by the large buyers, the change in quotations may stimulate orders, the manufacturers are considering a diminished output otherwise.

BINDER TWINE: The demand for Binder Twine is surprisingly light, showing that the retailers have larger stocks than usual which they have no ambition to carry over to next season. Eastern quotations, as follows, represent the market, f.o.b. Eastern factories:

	Cents per Pound.
White Sisal (500 feet to the pound)	9¼@10
Standard (500 feet to the pound)	9¼@10
Standard Manila (550 feet to the pound)	10¼@11
Manila (600 fet to the pound)	11¼@12
Pure Manila (650 feet to the pound)	12¼@13

Less than carload lots, quarter of a cent extra.

CORDAGE: The demand for rope has been but moderate, the following quotations about represent the prevailing market:

	Cents per lb.
Pure Manila, 7-16-inch and larger	11½
⅜ inch	12
¼ inch and 5-16	12½
No. 2 Manila	10@10½
Pure Sisal, 7-16-inch and larger	9
No. 2 Sisal, 7-16 inch and larger	8
⅜ inch	8½
¼ inch and 5-16 inch	9
Lath, Yarn, Medium and Coarse	8
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL: Under date of June 23, the following quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....40 cents per gallon.
In lots of 5 barrels or more.....39 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE PITTSBURGH TRADE.

There has been considerable improvement in the coal trade lately, occasioned by the settlement of the strike of the boatmen on the lakes, thus permitting shipments, which have been held up since the opening of lake navigation. As an offset to this, however, quite a number of coke ovens are being shut down, owing to the stoppage of the blast furnaces. The reduction of purchases by the railroad companies this year must be followed by greatly increased purchases next year, as they must have material to replace that worn out by the heavy traffic of recent years. It is expected that this will make a rush demand in 1905. A fair amount of trade is moving in the jobbing line and collections are quite as good as can be expected. LOGAN-GREGG HARDWARE CO.

THE CINCINNATI TRADE.

There is no reason for complaints as regards weather conditions, as June has certainly been an ideal month and goods seasonable for the hot days a-coming moving along with all the expedition looked for. Our friends, the Filipinos, were entertained by the Hon. Mayor and Citizens, and they were so much pleased with the visit that our Mayor received a letter from Washington after they had reached that city stating they could not help but remember the visit with pleasure as long as they lived. Next month those Princes of Good Fellowship, the "Elks," will be in reunion here and the city is already in the hands of decorators and entertainment committees, which promises a hot time for a "warm bunch" in hot weather. Nine acres of ground have been purchased in Oakley, one of Cincinnati's beautiful suburbs, by the St. Louis Car Company, one of the three largest concerns of the kind in the world, on which is to be erected an immense plant costing several hundred thousand dollars. Frank R. Cooper, of London, England, was in Cincinnati two weeks purchasing machine tools for his English factory. James R. Heath, manufacturer of cutlery, in Newark N. J., and Harry Bevis, of New York City, visited Cincinnati during the hot days. They said "Thousands of New York boys will be here in July for the Elks reunion, and you had better see to it that the weather is cooled off for the occasion." We have reported the matter to Mr. Bassler, who promises to regulate the weather to suit. William C. Kelly president of the big Axe manufactory at Alexandria, Ind., passed a few days here this month on his return home from Charleston, W. Va. Mr. Kelly said that he and his brother James P. Kelly had invested two million dollars in cash in a plant just started running in Charleston for the manufacture of Axes and other steel and iron goods. "Charleston donated the ground, 53 acres, and we do the rest." said Mr. Kelly, "and we will remove our entire plant from Alexandria, Ind., to Charleston, W. Va., in July. When we are fairly started the plant will turn out 12,000 axes a day, employing 3,000 men as against 800 in Alexandria." Ferdinand and Robert Kahn, of Paris, France, manufacturers of guns, tubes and other steel goods, were here for a week on their return to New York from St. Louis Fair, where they have a large display. Mr. F. Kahn said his Company employed some 10,000 men and he and his brother were "doing" the States, studying manufacturing and business methods. He said business is always good in France because there are no cut rates and bargain sales to cut off the profits, as we have here, or else we do not put real values upon the goods in the first place. In France they fix prices upon a basis of real values with fair profits added, and maintain them. The J. L. Wayne Hardware Company was twice visited, and the Roll, Crawford & Brendamour Company visited once this month by "tunnel burglars," who dug through cellar walls into the stores, carrying off in both cases fine revolvers and sporting goods and cutlery. CINCINNATI PRESS ASSOCIATION.

THE CLEVELAND TRADE.

One may hate pessimism and have no sympathy with those who are hopeless for republican government, but when the Metropolitan Street R. R. Co. and gas interest presume to dictate to Tammany Hall who they must support for President, and when the railroads centering in New York control the local election to get a mayor they can do "business" with, it is time that people realized that the moneyed interests are seeking control. However, as they propose to boycott Roosevelt there will be a chance to rebuke their arrogance by the vote of unpurchased and unpurchasable people, who love their country and care more for it than they do for mammon. Some of the wealthy men need to learn that there are some things that money cannot buy, and it will be important for bosses to learn this. Besides, it will re-enfranchise a lot of timid citizens. Intelligent independent voting by people who are willing to see their party defeated for the good of the country is increasing. When a man is elected by the use of his own money or that of others whose tool he is, republican government is disgraced. There is more danger to free government from this, than there is from anarchists. If the voters ever organize against capital in this country, it will be because capital first organized against the people. The limit of safety is already reached in some sections, but a government of the people, for the people, will be saved by the people. Band wagons will be full this Fall without Wall Streets contribution. The people are buying things they want to make life comfortable, and this makes a fair trade. Homes are being better furnished and surroundings beautified. Contentment, intelligence and refinement are increasing and the things that make life worth living are rapidly accumulating. The pride of locality should be encouraged by local merchants. They should give time to increase civic pride but not be leaders in personal extravagance. Whatever makes for the comfort of all the people, they should promote as a business investment. A careful study how best to use leisure for public benefit is one of the first qualities for a country merchant, as the interest shown in others will determine the interest that will be taken in business. Efforts to make your home town a good place to live in will act as a remedy against foreign catalogue houses. Enthusiasm for home interests and institutions is contagious. Merchants should always be the leaders of it. The crop reports are improving. Shortening of lake navigation will not be a loss to boat owners as freights will be increased and expenses reduced. Had navigation opened early there would have been a surplus of tonnage. Laborers seem to have a genius for striking at the wrong time.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE BIRMINGHAM TRADE.

As the weather figures so largely in the distribution of Hardware, it is always in order in writing for the trade paper to comment on the state of the same. Since the latter part of May the weather has been warm and even hot part of the time, just as it should be at this season of the year. Cotton, which is staple with us, is a sun plant and thrives best when the weather is hot and does but little good until the warm season is on. We have had less than our usual quota of rain up to date, which has enabled the farmers to kill the grass and keep the crop clean. The hopes for a good price for farm products have kept the farmer hard at work, which has had its effect to curtail trade of late. It comes at a good time when the clerks are taking their vacations and those that are left in their places find plenty to keep them busy. July 1st is the annual period for the settlement of the wage scale between the operators and miners. When conversation lags for lack of a topic, we are apt to hear the query, will there be a strike? The general impression seems to be that there will not be a strike. The operators are growing tired, from what I can hear, of this constant contest over the scale every year, and would prefer a fair and equitable basis running for a series of years. The operators will treat with their labor separately and not unitedly and will expect a modification of present scale. The public hope that a satisfactory basis will be reached without acrimony. There is not much railroad work under process of construction and very little projected. Business in the building line is good and our city continues to grow. New houses are going up on all sides. The prospects for fall trade are good, unless we have some calamity which can not be foreseen. The fruit crop is large and will be very helpful. To conclude, our people are cheerful and hopeful.

MOORE & HANDLEY HARDWARE CO.

THE MINNEAPOLIS TRADE.

We have in hand six bulletins issued by one of the largest grain commission houses here, who operate all over Minnesota, the Dakotas, Nebraska and Northern Iowa. While the various reports were not all entirely favorable, there was trouble with too much moisture in Red River Valley, and, consequently, late seeding, and in Southern Minnesota and Northern Iowa there is no doubt but that the wet condition has seriously affected the seeding, whether of wheat or corn. Still the reports, as a whole, are very satisfactory.

The wheat acreage for Minnesota and the Dakotas shows a slight increase over 1903, while the flax acreage they state they believe to be 45 per cent. less than that of 1903. The writer has talked with many men whose business it is to know about the general conditions and they all agree that the cool, dull and rainy weather that we have had so much of has been excellent for wheat, giving the roots a good chance to grow without forcing the plant above the ground, but that in some cases the weeds are getting a better start than they would like. While corn is backward, there is plenty of time for corn and that is not such an important crop with us as it is further south. We think we can safely say up to the present time, that the crop situation is as favorable as can be reasonably expected taking everything in consideration. Some speak very much stronger and say they never saw conditions look better. All this naturally will have a bearing on the balance of the summer and fall business.

Jobbers generally in all lines are complaining about business being quiet, with material shrinkage over last year, and there is a general complaint among the retailers of all lines. We ourselves have no particular reason to find fault, as our business thus far this year has been up to last year, which was the best year we ever had. but there seems to be a disposition to ease off on some prices, nails in particular seem to be effected somewhat. There is sharp competition, although the usual retail prices seem to hold fairly well. The labor troubles that we feared some time ago seem to be drifting along, both sides rather inclined to wait for the other side to make a move, consequently matters for the present time are moving along very smoothly. It has affected building operations without doubt, many not caring to start for fear of a tie-up, still, our building record for the year shows up good—May, in particular, being excellent—while June is sure to show up well. On the whole we cannot help feeling that conditions in the Northwest are not so bad, as good, if not better, than the average the country over.

W. K. MORISON & CO.

THE ST. PAUL TRADE.

Prospects in our territory are good, but immediate business is below the average. The indications for a crop have never been better, though some two months must elapse ere these are realized. Many unfavorable conditions can arise and cause a partial failure. We look upon the future as having in store an average, or even a better than average crop. Our merchants have so far this year bought and sold conservatively, so we have reason to expect a good fall trade. As every Hardware man knows, prices are stationary, and we all hope they will remain so. There is no apparent reason for a slump, and we do not expect one. Faith in the future is necessary, and that faith exists in the minds of those who think. Theodore Roosevelt will steer the Ship of State through to a successful conclusion of affairs. Surely he will be re-elected to his high office, and we can have faith, as his efforts are always towards the end that the country shall have a better, not a poorer, condition.

HACKETT, WALTHER, GATES HARDWARE. CO.

THE PHILADELPHIA TRADE.

The Spring season is rapidly drawing to a close and our thoughts are being centered more upon vacations than upon the actual course of trade, which, nevertheless, keeps up in volume quite equal to that of last year, and therefore can be giving no cause for complaint of being dissatisfied. In our own city there is considerable complaint among the retailers who have not as yet enjoyed the expected demand for hot weather goods, and two or three weeks of warm weather are needed to make an improved feeling in this respect. Owing to the high price of labor and materials, building is retarded and many small operations and some large ones have been laid aside until a more propitious season. This is having its effect among the trades and skilled labor is not so generally employed as at this time last year. These, however, are largely local conditions, and when we look away from our own vicinity we find favorable prospects in the West and a very healthy and prosperous feeling in the South. After all, the crops are the basis of our national prosperity and with these promising factors there does not seem to be much reason for apprehension in the near future. The market shows few important changes. The first of July is usually the time taken by manufacturers to revise their quotations and as that date is now only a few days removed we shall probably know before long whether the present stability is to be maintained. It is gratifying to report that collections seem to be improving. The small crops are now coming in and country dealers are much more able to obtain funds.

NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

THE DAVENPORT TRADE.

Races, National Conventions, the Fair, baseball and golf occupy most of the time and attention of the Hardwaremen, who are not attending local or State Conventions. The volume of trade is fully equal in amount to the corresponding period of a year ago, with collections not so good. Crops are looking well; weather is fine and the outlook for Fall trade is encouraging.

SICKELS, PRESTON & NUTTING CO.

THE SAGINAW TRADE.

Your favor of June 15th is at hand, and in reply, would say we are having warm weather, and the farmers are quite busy planting and cultivating their crops, and on that account, business is quiet. Collections are fair. The backward spring caused less beets to be planted, and the sugar factories are fearful that their supply of beets will be smaller than last year. We look for but a moderate Fall business, on account of the Presidential election. The indications now are that the crops will be up to the average.

MORLEY BROTHERS.

THE SAN FRANCISCO TRADE.

Fraternity feeling is manifest in all-around expression being heard in local trade circles anent the destructive fire of June 15, that burned an entire block and destroyed the stocks-in-trade of twenty-nine prosperous business firms in the northern California commercial center of Oroville. Two of the principal sufferers are the T. J. Kelly Hardware Company and the Ophir Hardware company, whose respective heads are admirable people and well known to the San Francisco trade. The Kelly Company loss is $3,500; insurance, $1,000, and the Ophir Company loss is $750; insurance, $250.

Although Builders' Hardware trade in San Francisco is not what it should be, nor what it would be were it not for the hold-back effects incidental to labor unionism, yet, it is reported, inherent strength of general prosperity seems sufficiently forceful to characterize the trade as active to a degree that keeps Builders' Hardware dealers from finding time to complain.

From outside—everywhere else, city, town and hamlet in California, and throughout the Pacific coast territory—traveling men report, and so do jobbers, conditions are different, betterment being the difference. Absence of labor unionism, or its feebleness and consequent harmless effect, are given as the cause of the better condition prevailing, as compared with San Francisco. The marvelous progress of Los Angeles, for instance, is pointed to and used in comment as a point in strong contrast to the struggle which San Francisco has had to rise to its present eminence. "But Los Angeles," remarked a traveling Hardware man, "glories in industrial freedom and individual liberty." And this traveling man handed the HARDWARE correspondent the following excerpt from a last week's Los Angeles publication, pronounced by the traveling salesmen to be "the sentiment of Los Angeles, and altogether fair in its contrast—showing as between San Francisco and everywhere else outside, not only in Los Angeles, but throughout the Pacific coast states."

"Strikes, boycotts and all the weapons of unionism have no terrors for the people of Los Angeles. If a man wants to build a business block or a home in Los Angeles, he can proceed in the work, will not be seriously interrupted and perhaps stopped by some unwarranted and silly walkout brought about by an interfering walking delegate. Industrial enterprises of all kinds can go ahead without fear of constant labor troubles. If San Francisco were as free from this unionism plague as is Los Angeles, the former would experience quite as marvelous a growth as the latter, and at once. The contrast between the two cities is strongly brought out by their respective building records.

"For instance, in San Francisco for the month of March, the only authentic figures for a recent month at hand, permits were issued for 186 buildings, at an estimated cost of $1,400,432; 63 permits for alterations, at an estimated expense of $106,568, and permits for 218 minor additions and alterations (mostly for repairs not exceeding $500 in cost), at an estimated expenditure of $39,655; making a total of $1,546,655. During the same month in Los Angeles permits were issued for this same class of construction, amounting to $951,029, or within $589,625 as much as in San Francisco. Now, since the Census Bureau on April 7, gave to San Francisco an estimated population of 355,919, and to Los Angeles an estimated population of 116,420, it will be remarked that Los Angeles, with a population of less than one-third that of San Francisco, had a building record for March almost two-thirds as great as the State's metropolis.

"That the building records of the two cities should be so out of proportion, population compared, is due in great measure to the fact that Los Angeles is free from the domination of unionism, and the further fact that San Francisco is in the merciless grasp of walking delegates, labor agitators and other demagogues. Happily, the fight now being waged in San Francisco for the 'open shop,' and against the union forces which have so greatly injured the city, shows many evidences of going forward to a successful issue; and as soon as San Francisco is free from the domination of unionism it will go by leaps and bounds to the position of greater importance, size and prosperity to which it is eminently entitled."

HARDWARE FACTS AND FICTION NOT GENERALLY KNOWN

WRITTEN FOR HARDWARE.

Fourth Article.

SIGNBOARDS.

A sign was a trader's heirloom in the sixteenth century, and as a matter of fact constituted the good-will of a business. Reading was a scarce accomplishment, and it would have been little use to write up names and descriptions of trades. Traders therefore had to resort to signs indicating their several trades, and to erect pictorial boards and signs consisting of actual articles in order that their occupation and location might be known. Ornamental ironwork was much used in an age when even the simplest lock, hinge or barred coffer was highly ornate. Signs were either suspended or attached to the walls of houses and shops, and throughout England the narrow streets of the towns of the sixteenth and early seventeenth centuries were full of overhanging signs indicating the names and occupations of the occupiers of the buildings. Painted signs were common, but few ironmongers adopted them, preferring the use of actual articles connected with their trade. This fact perhaps accounts for the antiquity of many existing Hardware signs; the copper and wrought iron representations of articles actually sold at the different establishments being painted again and again, and consequently having a much longer life than simple scenic signs or painted wooden boards.

Among the favorite emblems used to denote an ironmonger's occupation frying pans, teapots, kettles and dustpans may be mentioned as popular. Some ironmongers who regarded their tool departments as important gave preference to a large wooden hammer or a pickaxe, and some simply hung out a large saw and made it their sign.

In France painted banners were used as signs and hung out of shop windows and from the windows of rooms above. Such signs however, never became popular in England. Traders' occupations and their place of residence have frequently been perpetuated in history, and in old poems. The ironmonger's Axe in Aldermanbury is still referred to. At the time of the great fire of London the majority of the old wood, and even metal signs, disappeared, never to be revived in their full significance. After the restoration of the great portion of the metropolis carved signs in stone were adopted, but their general use as emblems of trade, except in rare instances, never recovered, although until quite recently tradesmen in the old market towns and cathedral cities in England still retained their trade signs. The use of swinging signs across the footways of the metropolis had become such a dangerous nuisance in the reign of Charles II that an act was passed compelling their owners to fix them from balconies or on the fronts of houses.

Curious and absurd combinations had grown to such an extent in 1710 that an effort was made to compel every shopkeeper to use a proper and consistent emblem of his trade for his sign. Locksmiths almost invariably used a huge padlock made of metal, although they sometimes varied it by hanging up a gigantic key constructed for the purpose. As late as the year 1800 many traders used signs as the only location of their trade. The custom of using gigantic signs sprang up soon afterwards, one London trader who is said to have made a large fortune by selling razors in the Strand, had a wooden razor reaching from his window down to above the roof. County Hardwaremen often adopted the sign of a straw bee-hive which articles were sold in large numbers before the days of modern bee-keeping appliances. A Hardware dealer in Seven Dials (one of the worst parts of London in those days) used the sign of the Golden Frying-pan.

It is interesting to trace the evolution of signs and to note how their general employment gave to the world many well-known surnames of to-day. Many dealers were better known a century ago by the names their signs bore than by their own family names. Among a host of other names of well-known surnames derived from such sources persons bearing the following are descended from Hardware traders: Axe, Arrow, Bell, Cann, Coulter, Chisell, Funnell, Forge, Hammer, Harrow, Kettle, Jugg, Potts, Plane, Rule, Saw, Shovel, Shears, Scales, Silverspoon and Trowel.

Of course, taverns have retained the old world method of recognition longer, and perhaps more generally, than any other branch of the trading community. Among the existing signs of hostelries are many relics of the past, and not a few can trace their connection with the Hardware world—some of their owners may have been traders too, and others operatives using the tools indicated. The following are a few of the signs of hotels and public houses closely allied to Hardware still met with: Anchor, Bells, Wheels, Cross-Keys, Anvils, Guns, Horseshoes, Pewter Platters, Ploughs, Compasses, etc. There are many signs, the origin of which is forgotten or unknown by the majority of passers-by. The "Dirty Dick" public house in Bishopsgate Street, Without, London, was once the famous Hardware store kept by a man named Richard, who earned the prefix to his name from the wild disorder and dirty state of his Hardware store.

A curious Hardware shop in general full
Of wares from Birmingham and Pontypool.

OLD ORNAMENTAL IRONWORK.

The ancient coffers, muniment chests, and strong boxes of our forefathers were ornamented in a wonderful way. Not only were the receptacles for treasures before the days of fireproof safes made of well seasoned oak, but they were strengthened by metal plates inside and out. Gradually strength gave way to ornament until, towards the close of the seventeenth century, delicate tracery and beautiful wrought ironwork covered the oftentimes intricate mechanism of the ponderous locks and fastenings which spread over the insides of the box covers. Door locks too, grew heavy and ornate; lock plates and door handles were truly splendid examples of what the craftsman can do with but few tools, and those of his own construction. John Evelyn in his diary under date 1554, refers to a visit paid to his cousin William Glanville, at Broad Hinton, who, he says, "showed me such a lock for a door that for its filing and rare contrivances was a masterpiece: yet it was made by a country blacksmith!" A similar lock is still pointed out at Hampden fixed to the door of a room (one of the few remaining of the older building) which the patriot is said to have occupied.

A few years ago some beautiful examples of early lock plates and door furniture were gathered together at Westminster, forming a most interesting exhibition. At the Victoria and Albert Museum at South Kensington there is a large collection of lock furniture, and a marvellous collection of keys. Indeed keys have often been among collectors' fads. The locksmith was a man of considerable importance in old times, and to judge from the locks, bolts and keys which have been preserved to us we must rank him very high in the artistic scale—the keys were masterpieces and real jewels of hammered iron.

PIKE MANUFACTURING COMPANY'S NEW CATALOGUE.

The Pike Mfg. Co., Pike, N. H., have recently issued the eighth edition of their complete catalogue, which is certainly the most useful one that has been sent out by their catalogue department, and should be in the working library of every Hardware dealer handling a class of goods so important as the production to which this pamphlet is devoted. This new catalogue shows several additions to their line of goods: They have added several brands of Scythestones, including their Quickcut Emery Stone, Crescent, National and Portsmouth Red Ends. The India Oilstone line, manufactured by the Norton Emery Wheel Co., Worcester, Mass., for which they have the sole selling agency, is given a conspicuous display. They have added a line of Quickcut Emery and Corundum Oilstones, this being a combination stone with one side coarse and the other fine, also Emery bricks, slips and axe stones. They show a new line of Oil and Water Stones in their Fastcut, a stone of gritty Pearl stock, put up in paper boxes, which is a very attractive medium-priced stone. In the Razor Hone line they have added the Barber's Special line, also Pike's "Ezy Edge" Hone, and a line of German water hones in individual boxes. Their Rotary Razor Strop has been perfected and is illustrated with full description, being now ready for the market. Several lines of knife sharpeners have been added, viz: the Fastcut Pocket Hone, an Arkansas Pocket Oilstone and Lily White Knife Stone, also the Sportsman's Pocket Knife Stone, which is especially designed for the camper and woodsman. The Eclipse Rubbing Stone shows a distinct departure from their regular line of goods, it is for the use of carriage and car builders, for rubbing down rough stuff, and is an excellent article for this purpose. It is fast displacing pumice and other rubbing stones for this work. They show also a full line of supplies for glass cutters, such as Craigleith, Blue Mitre, Diamonmitre Stones, Polishing Felts, etc., and have added to their line of dental goods a complete line of carborundum stump wheels, lathe wheels, and disks, and are now ready to supply this line to the dental trade.

A desire to mind one's own business is a taste that is hard to acquire.

ARKANSAS RETAIL HARDWARE DEALERS' ASSOCIATION

The Fifth Annual Convention of the Arkansas Retail Hardware Dealers' Association was held in Little Rock on the 8th, 9th and 10th inst., at the Gleason Hotel. The meeting was called to order by President John F. Maxey, on Wednesday morning, at 10 o'clock. Secretary C. E. Taylor in lieu of roll call suggested the reading of the Registry, in which the names of delegates and visitors were recorded. This was accordingly so done.

The members were welcomed to the city by W. E. Lenon, Mayor of Little Rock, who made a brief address of welcome, which was responded to on behalf of the Association by J. B. Avera, of Paragould. J. H. Boicourt and J. H. Graham were respectively appointed Sergeant and Assistant Sergeant-at-Arms.

J. J. Mandlebaum of the Fones Brothers Hardware Company, on behalf of the jobbing interests of the city, expressed his unqualified approval of the Association movement, and stated that it was the desire of the jobbers to work in harmony with the organized retailers, assuring them of every assistance in their efforts. He said that every care had been taken that the assembled delegates should be entertained during their stay.

PRESIDENT HAMP WILLIAMS.

M. L. Cory, Secretary of the National Retail Hardware Association, made a short address by invitation, referring to the interest created by the conventions held recently in Atlanta by the Jobbers and Manufacurers, and the careful attention given to the important subjects brought forward on that occasion.

He was followed by a number of the traveling representatives present, who made brief remarks. Among those participating were the following: Senator Sengel, of Fort Smith; Mr. Hardy, from Tennessee; Mr. Duley, of the Duley-Mons Arms Company; Mr. Burris, of the Rock Island Plow Company; F. W. Farley, of the Jno. Deere Plow Company; Mr. Lofton, of Hibbard, Spencer, Bartlett & Co., and Capt. A. F. Cook, of Russellville. The convention then adjourned until the afternoon.

AFTERNOON SESSION.

PRESIDENT MAXEY'S ANNUAL ADDRESS.

President Maxey delivered his annual address, in which he said:

The year has been so short that I have not had time time to learn to make a speech, but I will in a very few words give you all. We all have our ups and downs, in a business way. During this short year I hope all of the Hardwaremen of our State, and especially our membership, have done their duty in writing to our Congressmen to direct and encourage them to lend all their energy in an effort to defeat the Parcels Post bill, which the catalogue houses have been earnest in their efforts to get through that body for the benefit of the few and against the interest of the many. Whether all have written or not, I know that we have done something in this matter, and we should feel encouraged to make a greater effort in the future to do all we can to overcome this enemy, feeling sure that if we work with an untiring persistency we will come out victorious. You know that in union there is strength, and as this bill would affect the jobber very seriously, I think it time that the retailer and the jobber get closer together. Let them see if they cannot work together in the same harness, and maybe this would make a stronger team. Then all make a strong pull and a long pull for the objects which they mutually desire.

He was followed by Secretary Taylor, who said, in part, as follows:

SECRETARY C. E. TAYLOR'S REPORT.

Believing that many members can do a great deal more than only a few can do, and that we must have members in order to accomplish anything as an association, I have devoted much time to a systematic effort to bring in new members, and the statistics show the gratifying increase of 42 per cent. The constant, persistent effort which has been made during the year has borne fruit. Many good merchants who were not with us during last convention are on our membership rolls to-day. The traveling man who calls on our trade as a rule is friendly to association work, and the names of several new members have come in from the direct influence of our indispensable brother, the drummer. A strong effort should be made during the new year to increase our membership, and the next convention should show fully as large an increase as we have to report to-day.

CATALOGUE HOUSE QUESTION.

So much has been said on this question recently that extended notice of it here would be tedious to you. The jobbers and manufacturers in their conventions have not hesitated to discuss it, and have called to their meetings our national officers, in order that the plea of the retailers might be strongly presented. The issue between the retail Hardwaremen and the catalogue houses has been clearly defined. Retailers in every line of business should take it up. President Bogardus expressed the situation so clearly that I make the following extract from his address:

We are not here to ask that any man be driven out of business. We are not here to ask that any business enterprise be throttled, but we are here to ask that men who are seeking to break down the retail dealer in order that they may climb upon the ruins may be hindered from accomplishing their objects. We are here to ask that the help heretofore given them be withheld and that other considerations besides quantity regulate the price.

INSURANCE.

Many of the older and stronger State associations have their own mutual fire insurance company. The matter is one which should be considered carefully by this association. I suggest the appointment of a committee to give the matter careful consideration.

Mr. Taylor then presented his report as treasurer, which was referred to the Auditing Committee.

James M. Pittman, of Prescott, read a paper on

WHAT CAN BE DONE BY YOUR MEMBERS TO CREATE A MORE ACTIVE INTEREST IN ASSOCIATION WORK?

from which we cull the following extracts:

With what thought I have been able to bring to bear on this subject, I have reached the conclusion that as individual members we can do but little to create an active interest in association work, but as an association of active, intelligent and determined members we can accomplish a great deal that will "create more active interest in association work." The individual member can do but little, but if we unite and act on the motto that "an injury to one is the concern of all," we can create that interest which will not only hold those who have already joined, but will induce all others "who seeing our good works" will become members of our noble order.

* * * * * * *

CATALOGUE HOUSES.

We note with no small degree of satisfaction the interest that is being manifested by the different associations of jobbers and manufacturers in the direction of suppressing and curtailing the business of these "business pirates." It is the retail Hardware dealers who have created a demand for all the standard brands of Hardware. Since they have done this, for them to stand idly by and, without a word of protest, see the jobber and the manufacturer rob them of their well earned trade and turn it over to a lot

Digitized by Google

of business cut-throats, is to be knocked down and then lie still while your antagonist rubs dirt and dung into your hair. The jobber and the manufacturer are waking up to the situation since our organization has given them to understand that we know these catalogue houses can get their supply only through them and that we have determined that we will not handle their goods as long as they try to market their wares through these channels.

* * * * * * *

JOBBERS AND MANUFACTURERS.

In order that we may create a more active interest in association work, and hold that interest already created and undisturbed, we must have the rights and privileges between the retailer and the jobber more clearly defined and sustained. As an association we have heretofore declared that all manufacturers and jobbers of Hardware confine their business to Hardware dealers, and that each member of this association pledge himself to use every reasonable effort to enforce this demand. I regret to say that I have had complaints from some of the membership, with a statement that they did not feel that interest in our association that they otherwise would it we would put in motion some plan to enforce this resolution. Some jobbers go so far as to claim that it is no interference with our rights for them to sell any and all merchants at the same time they sell the regular Hardware dealer. They also claim the right to sell the blacksmith. In some towns I find the dealer, as he understands it, trying to protect himself against this class of jobbers and withholding his business from them, while in other towns no attention is paid to it. It seems to me that this association should have some conference with the jobbers and reach some conclusion by which the rights of both parties could be determined and some measure agreed upon by which all parties would be benefited and none injured. There should be no antagonism, and if we properly understand each other there will be none.

Let us continue a more healthy and active interest by a proper observance of these things, and a determination to see for all that every interest is properly guarded, and we will without a dissenting voice praise association work. I am not satisfied with the objection to such an agreement, that it will not be enforced. I would remind you that many associations enforce demands against jobbers and manufacturers that are much more unreasonable than we are likely to make. I call your attention to some of the demands of the plumbers. Where is the jobber in plumbing goods that will sell to anyone not recognized by the Plumbers' Association? Let our resolutions be fair and reasonable, and then enforce them.

* * * * * * *

E. E. Mitchell, of Morrilton, discussing the same topic, spoke as follows:

I think one of the surest things to create interest in the association, to help build up our association, is to follow every suggestion that the secretary might make. While the president is at the head of the association, as a matter of fact the secretary is more in touch with the work and is better posted than the others. So when he writes letters in connection with the work we should answer them promptly and fully. If he gives us a little list of dealers to write to, attend to it at once; don't put it off until the next day or the next week. I acknowldege that I have not done as well as I might have done, but I have usually attended to this pretty promptly, and shall do better in the future. Let us back up our secretary with our full support. In this direction lies much effective work.

* * * * * * *

Hamp. Williams, of Hot Springs, read a paper on

THE BEST METHOD TO KEEP A WELL ESTABLISHED BUSINESS UP TO ITS STANDARD,

from which we select the following:

Overbuying is one of the diseases of the Hardware business. It is like overeating or overwork to the human body. You may feel the effects many days hence, or it may possibly end in destruction. You should exercise good judgment and buy goods that you think are most suited to your trade and then push them. Keep your want book continually before you and increase your purchases in proportion to the possibilities of increase in trade, adding new lines as fast as your finances and trade prospects will permit. When you make a mistake and buy too much or get goods that are unsalable dispose of them as quickly as possible, because they are, like an eating sore, badly in the way and will spread if the remedy is not applied at the beginning.

* * * * * * *

GET GOOD HELP.

If you want your business to keep up, get the best men in the country to help you. The President of the United States has plenty of time to go hunting and fishing, because he has good and efficient men at the head of each department. He has a system, a method and a way of doing everything There is no retail Hardware store in this country which requires as much supervision as the running of this Government, yet a great many of us think our business would go to destruction if we were not present every hour and every day. That is proof that we lack method. The fault is our own.

* * * * * * *

FINANCES.

I want to call your attention, also, to the method of financiering. You should always know what you owe and when it is due. You should also know what is due you and when it is to be paid. You should know your ability for paying before buying. You should also know the way of collecting before selling. You should watch your percentage of profit, and should by all means know what portion of your profits goes for expenses to keep your business up to the standard.

* * * * * * *

Cutting prices for an advertisement is the most dangerous proposition confronting the retail Hardware dealer to-day. It will positively end in the destruction of your business if you keep it up. Sell your goods at a fair and reasonable profit. Do not sell one article for cost and another at double its worth; sell each at a fair margin and see that your customer gets what he buys.

If you will adopt this method and impress this on the mind of every man in your territory about once in every thirty days, regularly, and at the same time soliciting their patronage and calling their attention to the things you most desire them to know—special brands, goods that your competitors do not handle—and keep persistently at it, you will find that "Cheap John" competitors and catalogue houses are not in step with you at all.

People, as a rule, are willing to pay a profit, but no one is willing to be charged extortionate prices. If you sell one item for less than cost you are compelled to get a double profit on the next. If you sell one customer at cost, in order to get his influence, you are compelled to charge the next too much in order to get your legitimate profit, and the man you robbed will tell his friends to keep away from you, while the influential man, the one you sold at cost, will only thank himself for his own shrewdness in buying and will only speak of it in a manner to his own credit. Do the right thing; establish a record for right doing, and the people will find it out.

* * * * * * *

Advertise in the newspapers; post the fences, old barns, logs, trees, bridges and rocks. Keep your name constantly in the minds of the people. If you don't advertise you would be surprised to know how many people there are in your town and county that never heard of you.

A few complimentary remarks of Secretary Corey brought the session to a close.

THURSDAY MORNING'S SESSION

gave the traveling representatives another opportunity of participating in the proceedings, which was availed of by Mr. Sneed, of Simmons Hardware Company, and Mr. McNeely, of the International Harvester Company of America.

A catalogue to offset Catalogue House Competition suggested by Hibbard, Spencer & Bartlett, was then discussed, the cost of which would be only nominal, and it was thought would be of great advantage, but no definite action was taken upon the proposition.

C. T. Rosenthal, of Batesville, read a paper on

BUSINESS HINTS IN THE HARDWARE LINE

in which he interested the members with his original views.

He was followed by J. L. Davis, of Magnolia, who read a paper on

WHAT ARE THE BEST METHODS OF EXTENDING CREDIT AND MAKING COLLECTIONS?

in the course of which he said:

After an experience of almost 20 years in a retail store, occupying successively every position from boy helper in a country store to head of the firm, I am persuaded that lack of system is the rock on which many a retailer's craft breaks and goes down; and in no other department is it responsible for more failures than the granting of credit and making collections. In no other department is the management so loose and in no other is it more essential that a strict supervision be maintained. The Hardware store is essentially a credit store; not in the sense that the general store is sometimes considered, but we are called upon by the very best class of trade for accommodations, ranging from one to twelve months; and while it is thus so considered, it can be conducted upon a safe, sound basis without material loss.

* * * * * * *

A large percentage of losses is the result of overzealousness in business, as well as inability to say no. I know it does seem to the merchant that he has developed into the basest ingrate when he has to refuse credit to a customer who has spent his cash, as well as used his influence for the house, and who only asks for a

Digitized by Google

small amount for a short time. But if the party is unworthy of credit say no, even at loss of his business. When a customer proves to you that he is not honest and trustworthy he should not be given a line of credit, except when ample security is offered. Clerks should not be given *carte blanche* in matters of credit, but when application is made should refer same to the head of the firm. Due regard should be given to a man's ability to pay, but the vital part to consider is honesty of purpose, as shown by previous conduct. A limit should be placed upon most accounts and the bookkeeper required to notify credit man as soon as same is reached, whereupon the customer should be required to give additional security.

* * * * * * *

We should have a distinct understanding as to when the account is to be paid and have the bookkeeper mail statement on such date, to be followed by others of a more "pressing nature" if not responded to in a reasonable time. All accounts should be closed by note if not paid at maturity and security exacted. This will prevent disputes months afterward and retain the friendship of many who might otherwise become enemies of the store. The local bank can be made a help in collecting notes from your sensitive customers, and will cheerfully do so without cost to you. The average customer knows better how to "stand you off" than the banker, and will pay promptly in order to establish a reputation for debt paying.

A regular collector should be kept and should be sent regularly to see the delinquents, which person will be found to pay better than the best salesman in the house, although his work does not show up so well, and frequently seems to be an unnecessary expense that might as well be dispensed with without material loss.

* * * * * * *

At the end of the year charge off all doubtful accounts and turn over same to the collector, with instructions to collect or compromise. In this way they will not be lost sight of by being swallowed up in the new year's business.

Finally, one idea should be borne in mind constantly: COLLECT WITHOUT LEGAL PROCESS.

CATALOGUE HOUSE COMPETITION

looking at it from the standpoint of a jobber, was discussed by R. W. Shapleigh, of the Norvell-Shapleigh Hardware Company, of St. Louis, from which we select the following:

* * * * * * *

The first duty of a jobber is to his customer. Why? Well, it's not pure philanthropy on the jobber's part; we need you, we need your trade, we make our money on your business. What injures you injures us. Why should we not help you all we can?

IN ADVOCATING THE LARGEST POSSIBLE PUBLICITY OF THIS CATALOGUE HOUSE QUESTION

I have had in mind the opinion that the customers of the merchants in any certain town do not realize the harm they are doing their community by sending their money and orders to catalogue houses. When they see a catalogue house price that is lower than their merchant's price on any article they are immediately dominated by the intuitive motive of selfishness and greed, and the feeling that they are smart and are benefiting themselves by sending the order to the catalogue house. But are they doing so when the question is looked at in its broader aspect of the good of the whole district? Suppose a considerable number of any community were to adopt this catalogue habit. It is evident that the business of the community would quickly decrease, the ability of the merchant to barter with the farmers of the section would be curtailed. The traveling salesman would "pass the town up," and the trade of the whole section would languish. The welfare of the dwellers in any community is thoroughly mutual, and is founded on the prosperity of all classes. The success of the farmer is necessary to the merchant.

* * * * * * *

Mr Corey, taking the retailer's standpoint, ably responded to Mr. Shapleigh's remarks, in the course of which he said:

The business world has at last recognized the injustice of the special favors given four or five large retail houses whereby they are put in position to demoralize and render unprofitable the trade of 25,000 retailers and over 250 jobbers. It is not what they sell that hurts as much as the dishonest methods they employ in quoting extreme prices, often on goods they do not even carry, expecting to substitute brands of unknown origin and character under extravagant guarantee that they well know they will not have to make good, on account of distance, and because their customers are unable to explain by letter and maintain their rights against special men who are employed to use their entire time in avoiding such responsibility and expense. These mail order adjusters, it is said, become so expert that they usually succeed in convincing a complainant that he is the one to blame for any unsatisfactory results, and then by a system of flattery and soft soaping they often sell the same man over again, in spite of former experience. Such consumers as buy on account of being rated at home as deadbeats, chronic kickers, dishonest, etc., will always patronize foreign institutions rather than home, and we don't care if they do. But there are good, intelligent, honest farmers and mechanics who read and learn, who prefer home buying on equal terms, that are sending away for their supplies because

WE HAVE ALLOWED OURSELVES TO BE UNDERSOLD,

and they consider it their privilege to buy where they can do the best. Can any one deny them the right?

* * * * * * *

Never in the history of the world has the rule, competition must be met, applied with more force than to-day. The man, woman or child who does not read is a marked curiosity. Nearly every home contains a book from a catalogue house styled "the great price maker." People are advised to refer to them to prevent local merchants from overcharging. On such specialties as are well known and standard, that are sold in every store, an extremely low price is quoted, sometimes even less than the catalogue house cost. Why? To discredit and discourage the local merchant, to make his business unprofitable, to prove their lying assertion that everything they sell is based upon one little, puny margin of profit. To build up themselves by tearing an established business down.

* * * * * * *

LET US COMPARE THE TWO SYSTEMS.

The catalogue houses of Chicago claim to employ about 10,000 people. We are told that the wages of 75 per cent. are less than $12 per week; in the city this means bare subsistence. Less than 5 per cent. of the employees are married; they can't afford to be. There is very little chance for advancement and less for development, and yet they say they did $55,000,000 business last year. This would have represented 2200 retail merchants doing $25,000 each. They would employ 10,000 clerks, paying over $15 each.

SECRETARY M. L. COREY.

They would occupy 2200 store rooms, 200 homes, maintained and educated 6000 children, paid 53 times more taxes, 500 times more for local improvement, church and school maintenance.

* * * * * * *

Gentlemen, they have already exhausted nearly all their ammunition. I believe we should fight the devil with fire. Let price meet price and proclaim it from the housetops. Don't you feel like a man when you greet your customers and show them goods priced right? Don't you feel humiliated and guilty when you have to explain and apologize? I favor the manly way, but the loss must not rest upon the retailer alone. The jobbers (some of them at least) have flirted with this notorious dame, and now we demand that they step over on our side, furnish us goods at a price that will enable us to sell our customers at a profit, meeting catalogue prices, no matter what they may be.

The following resolutions were offered by J. M. Pittmann:

Resolved, That a vote of thanks is hereby tendered R. W. Shapleigh, of the Norvell-Shapleigh Hardware Company, and M. L. Corey, secretary of the National Retail Hardware Dealers' Association, for the interest they have manifested in coming so far in response to an invitation to read papers relating to the business of the catalogue houses; and it is also

Digitized by Google

Resolved, That we recommend to the committee of jobbers and manufacturers who have in charge the catalogue house question that it is the sense of this association that some means should be adopted by which standard brands of Hardware should be kept out of the hands of the catalogue house.

An interesting discussion followed, in which Messrs. Pittmann, Mitchell, Maxey, Corey, Taylor, Graham, Williams, Shapleigh, Stewart and Jackson participated.

MUTUAL INSURANCE.

The Committee on Mutual Insurance reported as follows:

With the limited information at hand we are not prepared to advise the incorporation of a mutual insurance company, but we feel confident that there would be a great saving in premiums if such a company was organized.

We would advise that a committee be appointed to fully investigate the matter and report their findings to the annual meeting in 1905 with some plan for organizing a mutual company if they deem it feasible and advisable. We find that several of the State Hardware mutual companies have been doing a safe and satisfactory insurance business for several years at a saving of 25 to 35 per cent. on premiums and at the same time laying up a safe surplus fund to meet emergencies. We also find that the National Retail Hardware Dealers' Association organized a mutual fire insurance company last year, which is doing a good business. We would advise that our membership take insurance in some one of these companies.

From such information as we are able to obtain we feel safe in saying that the Hardware risks are less hazardous than the average mercantile stocks, while the old line companies are charging us as much or more than the ordinary risk. It is therefore incumbent upon us to seek a way of escape from these exorbitant rates.

The Committee on Resolutions returned the customary resolutions of thanks to those who had contributed in any way to make the convention successful.

ELECTION OF OFFICERS.

The following officers were chosen for the ensuing year:

PRESIDENT, Hamp Williams, Hot Springs.
FIRST VICE-PRESIDENT, Thomas B. Stewart, Newport.
SECOND VICE-PRESIDENT, R. P. Graham, Fordyce.
SECRETARY-TREASURER, C. E. Taylor, Little Rock.

The following committees for 1904-1905 were appointed by President Williams to serve during the ensuing year:

INSURANCE: J. M. Pittman ,Prescott; C. T. Rosenthal, Batesville; R. H. Strong, Ozark; H. W. Patrick, Russellville; L. K. Mandlebaum, Little Rock.

FRATERNAL RELATIONS: J. H. Crouch, Augusta; Manly Fox, Clarksville; L. A. Morgan, Victoria; P. J. Tidwell, Buckner; A. J. Sisney, Atkins.

PROGRAMME: E. P. Gaines, Lake Village; W. A. Jackson, Dardanelle; H. E. McRae, Arkadelphia; J. B. Avera, Paragould; E. D. Bracy, Little Rock.

GRIEVANCES: D. E. Watson, Hamburg; W. M. Harrell, Conway; J. P. Simpson, Malvern; K. G. McRae, Hope; W. V. Hamilton, Clarksville.

TRANSPORTATION: F. C. Stearns, Hot Springs; Robert Conn, Suttgart; R. N. Vail, Morrilton; W. J. Chatfield, Texarkana; J. C. Barlow, Helena.

MEMBERSHIP: E. E. Mitchell, Morrilton; C. F. Wingfield, Hope; W. E. Dean, Portland; C. J. Crane, Batesville; W. E. Watkins, Mena, S. R. George, Magazine; W. T. Avera, Pocahontas; J. B. Hurley, Warren; L. D. Smith, Stephens; C. B. Winburne, Coal Hill; R. P. Allen, Van Buren; W. M. Graham, Clarendon; A. C. Ward, Beebe; J. H. Morgan, Camden; R. F. Roys, Russellville.

TRANSFORMATION OF METHODS IN AMERICA'S STEEL INDUSTRY.

When Mr. Wilson, the inventor of the Carnegie Homestead Steel Works, U. S A., asked Charles M. Schwab to back him in marketing a non-nicotine, "continuous" dry cold-smoke smoking pipe, Mr. Schwab laughed and jocularly remarked: "Invent a 'continuous mill,' Wilson; I'll back you on that." Wilson shook his head. The idea, however, stayed with Mr. Schwab.

In steel mills, the course of the material as it goes through the process of manufacture is normally zigzag. The ore, the molten metal, and the billets are carried by machinery or on cars here and there and back and forth for treatment. The "continuous mill" would be one in which the material would follow an approximately straight line from process to process—the acme of economical handling. It would comprehend a complete chain of mills under one roof, beginning with the furnace in which the crude steel is smelted from the ores and ending with the bins from which the finished product is loaded into cars for shipment—a mill operated entirely by machinery.

When Mr. Schwab became president of the Carnegie Company, he discussed the possibilities of his "continuous mill' with Mr. Carnegie. About this time the company planned to compete in Europe with European manufacturers in the sale of steel bars. Then the bar prices fell, and the company was about to abandon its foreign project as unprofitable, when Mr. Carnegie said: "No, let us build Schwab's continuous mill. If it operates successfully, it will lessen the cost of production almost half. We can then compete anywhere. Never mind the expense of several million dollars. We may be about to revolutionize steel manufacture."

That is how the continuous "merchant-bar" mill came to be erected at the Carnegie Steel Company's plant at Duquesne, Pa., U. S. A. For it was built. The mill is a marvel in every sense. Its main shed is more than a mile long. At the south end is located a furnace. Here is received the ore, dolomite, pig iron and other material, which is emptied into the furnace by huge electric charging machinss. One charging machine is apportioned to from six to twelve furnace pits, operated by a single man. Each furnace is operated by a force of three, while half a dozen laborers complete the entire force of the department. In this furnace the steel is prepared for pouring in liquid form into large ingot molds which are transported, when full, into another department on trains of "buggies," or little flat cars.

These molds are placed in cooling pits. To make place for them, other molds, which have stood there some time, are now removed and transported to the first set of rollors, where the crude ingots are now subjected to their first rolling. These ingots weigh tons each, yet so perfect is the automatic arrangement that but one man is necessary to operate the levers which throw the steel, now considerably reduced in size, across other rollers, an dstill others, to the final "shaping" machinery.

In less than fifteen minutes after leaving the cooling pits the ingot has been compressed into what is technically known as "a shape." This shape now passes through its very last set of rolls and is cut into sections of exactly the same length, size and weight. Each of these sections is known as a bar. This bar is red hot. In this condition it is marked by steel stamps and thus identified for shipment.

The bars, as many as fifty being cut in a minute, must now be cooled and loaded. They, therefore, pass up a ladder-like inclined plane to an elevation of about twenty-five feet. At this point the cooling bins are reached, into which they fall in great confusion. These bins resemble those of a great granary, except that they are built of steel and are perforated. Gallons of water are sprinkled over them continuously. The water and atmosphere quickly cool the newly made bars. The gates of the bins are now thrown open and the whole lot is dumped into steel cars that have been placed directly below. The process of manufacture is now complete.

That the process is economical is obvious, occupying hardly more than an hour after the pouring of the steel from the pits of the furnace. Rush orders have often been received in the Carnegie Company's office at Pittsburg at six o'clock in the evening, and by six the next morning the proper number of bars have been manufactured, loaded and shipped to their destination.

There is a saving, too, in labor. Fewer men are employed in this continuous mill than in any single department of any other Carnegie mill. In transportation also there is saving. Whereas, at Homestead, for example, the hot ingots must be carried by means of steam locomotives, often a half mile through the yard, here they proceed to the rollers direct and reach their destination within a few minutes.

This mill is, indeed, a near approach to the solution of the grave problem of limited operating space that confronts steel manufacturers everywhere to-day. It is a triumph of industrial management.—*World's Work.*

SAMPLE WAREROOMS FOR EXPORT TRADE.

(*From United States Consul-General Guenther, Frankfort, Germany.*)

The astounding rise and spread of Germany's export trade within the last twenty years is chiefly due to the superior mercantile ability of the German manufacturer, exporter and commercial traveler. It is the latter who, owing to his fine social accomplishments, as well as his perfect business training, has been successful in gaining foreign markets at the expense of older commercial nations, such as England, France, Holland, etc., who had possessed or dominated those markets formerly.

The maintenance and increase of her export trade is to Germany a life question.

The Germans are very active in adopting all methods which promise to encourage or aid their export trade; among these the fine sample warerooms which exist at Hamburg, Berlin, Leipzig, Dresden, Cologne, Stuttgart and Frankfort deserve mention, as they have been instrumental in procuring many orders from foreign visiting buyers. These sample warerooms are a special attraction to foreign purchasers, because the latter can there view and compare the products of various leading manufacturers of one line or branch, which is a decided advantage, and, besides, a saving of time and labor.

At these warerooms the exporter's agent is ready to give the buyer accurate and full information concerning best transportation facilities, packing, customs regulations, insurance, etc. It would be desirable if our American manufacturers and exporters, boards of trade, etc., were to inspect these German sample warerooms, where they could receive many valuable hints.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Bainbridge, N. Y.—C. W. Ireland Co.; Hardware; has been incorporated; capital, $16,300. Incorporators: C. C. Hovey, C. W. Ireland, Lucy E. Hovey, Bainbridge, N. Y.

Batesville, Ind.—Meyer Lumber and Hardware Company has been incorporated; capital stock, $40,000; by John Meyer, Frank Meyer and Jacob Meyer.

Beloit, Ohio.—The W. P. Bailey Hardware and Engineering Company has been incorporated with capital of $10,000. The incorporators are: W. P. Bailey, C. R. Oesch, Sarah Bailey and T. L. Stanley.

Berkeley, Cal.—The Driggs-Butterfield Company has been incorporated to conduct a Hardware store. The company has a capital stock of $25,000. The directors are: E. H. Driggs, F. L. Butterfield, C. A. Driggs, R. P. Butterfield and C. W. Dickson.

Canon City, Colo.—The J. M. Wright Hardware and Supply Company has been incorporated; $30,000; J. M. Wright, R. C. Pierce, W. O. Dray; Canon City.

Columbus, Ohio.—The Norwalk Hardware Company has been incorporated with $15,000 capital. Directors: H. C. Breckenridge, president, treasurer and manager; A. G. Yanders, vice-president; Clayton J. Rood, secretary; Cornelia N. Breckenridge and Karl S. Breckenridge.

Connellsville, Pa.—The Schell Hardware Company has been incorporated; capital, $60,000; treasurer, C. D. Schell, Connellsville; directors: C. D. Schell, E. C. Higby, Connellsville; Paul A. Schell, Somerset.

East Chicago, Ill.—Chicago Hardware Company has been incorporated; capital stock, $12,000; by George H. Lewis, David J. Lewis and James Clements.

Elkland, Pa.—Fred Gleason has opened a new Hardware store.

Ft. Gibson, Miss.—The Clarbourne Hardware Company has been incorporated to do a wholesale and retail Hardware business. Capital stock, $25,000. Incorporators: Jos. T. Brake, D. C. Houston, T. R. Warburton and H. M. Brake.

Greensboro, Ala.—Lane Castleman has opened a new store with a complete line of Hardware.

TRADE NOTE

Norfolk, Va.—The plant of the Norfolk Cutlery Company was sold to the H. W. Rodgers Plating Company, of New Jersey, and the price paid was $14,900. The Norfolk Cutlery Company will now settle up its affairs and the H. W. Rodgers Company take charge. The mill will be managed as at present.

GEM FOOD CHOPPER

We have been doing some very effective advertising of Sargent's Gem Food Choppers but we are planning to make the advertising of the coming fall and winter even more effective than any we have heretofore done, with the idea of impressing on the mind of every housekeeper the fact that the Gem is needed in her kitchen.

You should make the Gem one of your leaders, there is profit in it and we help you sell it by our general advertising and by furnishing you with helps for your local advertising.

Ask your jobber about the Gem.

HALL STAND HOOKS

These Hooks are intended not only for Hall Stands, but for Restaurants, Hotels, Barber Shops, Lodge Ante-Rooms, &c. The cut shows one of a number of patterns we make—some in solid bronze and some in iron. Notice that there is a hook for the coat and one for the hat; other styles are made double, two hooks for coats and two for hats. They are nicely finished goods that will sell if displayed and brought to the attention of prospective purchasers.

MR. HARDWARE DEALER :

We might take this space in giving a detailed description of

THE FOUR-LEAF CLOVER CREAM SEPARATOR

but this would not tell you why it will be to your individual interest to investigate further. Extensive and interesting advertising in the best mediums is creating a demand from dealers that is simply phenomenal, and the tide will rise higher and higher. We will regard it a personal favor if you will write us for detailed information as to the merits of this Separator and its virtue as a money-maker for you.

GALVANIZING SMALL ARTICLES.

An improved method of galvanizing small articles, such as nails, screws, tacks, rivets, washers, etc., is now being brought to the attention of manufacturers. Representatives of the International Specialty Company of San Francisco, Cal., are now in New York, at the Marlton Hotel, 5 West Eighth Street, for the purpose of introducing an apparatus invented and patented by George Porter, an expert galvanizer. This apparatus, it is claimed, will be the means of placing on the market a number of galvanized goods which are not now carried in stock.

In the old method of galvanizing, the articles are placed in perforated dippers or baskets, dipped into a tank of molten zinc, left there till brought to the same temperature as the zinc, then taken out and shaken into an inclined chute leading to a water tank, leaving a large quantity of surplus metal adhering to the articles. the case of small articles, a large percentage of them will remain stuck together in bunches. The articles when taken out of the water are sifted in sawdust to dry them and the bunches of stuck articles are picked out. By this method it is almost an impossibility to produce a satisfactory galvanized wood screw, for the reason that the slot and the thread are filled up with surplus metal. Washers are also difficult to galvanize, owing to the large amount of flat surface on them and the liability of their sticking together. The water cooling also has a bad effect on the metal of which the articles are manufactured.

By the Porter method, as described by the inventor, the articles, after being dipped in the molten zinc, are thrown into the hopper of a machine which does the rest. It handles anything from a small tack to a 60-penny nail at the rate of from 2,000 to 3,000 pounds per hour, and a boy can run it. It removes all unnecessary surplus metal, cools without coming in contact with water and delivers the articles into kegs or boxes ready for shipment with one operation. Its work is done so quickly that it allows the galvanizer to use his metal at a lower degree of temperature, and hence a less amount of dross is produced and the life of the metal tank is prolonged. The cooling process is so gradual that the temper of the metal is not affected, leaving it in its original soft and malleable condition. The advantages of such a process on such articles as clinch or boat nails and rivets can easily be seen. On screws the zinc is so evenly distributed that the thread and slot in the head are left perfect.

This process, it is claimed, will cheapen wire nail galvanizing to such an extent that all wire nails can be galvanized. The galvanizing of nails will greatly increase their holding power, at the same time making them absolutely rust proof, so that they can be shipped to any part of the world or kept in stock for any length of time without fear of becoming rusty or damaged by dampness.

This apparatus is not a matter of experiment, one of the machines having been in practical operation for some time in the Porter Metal Works, San Francisco.

HARDWARE PUBLISHING Co.,
309 Broadway, New York

Business Opportunity.

You can keep up-to-date in business methods, prices, and everything else pertaining to the Hardware business, by reading each issue of "HARDWARE" carefully. **$1.00 for 24 Numbers.**

For Sale.

50 new cold weld seamless steel pressure tanks (20 gallons capacity, tested to 200 lbs) each complete with double acting liquid or air pump, valves and pressure gauge; guaranteed to be in perfect condition—never used; cost each $25; will sell the lot $12 each. Address "A. P." HARDWARE.

STOCK of Hardware, Stoves, Etc.—Located on one of Cleveland's principal streets and about two and one-half miles from center of city. Stock about $3,500, business $8,000 to $10,000 per annum. A good business and one we can recommend. Especially for a German. For particulars, address The McIntosh Hardware Corp'n, Cleveland, Ohio.

THE HUDSON STOVE WORKS (including machinery, tools, patterns, etc., etc.), situated in the City of Hudson, N. Y., opposite N. Y. Central & Hudson River R. R., also Boston & Albany R. R. freight depots and within 100 yds. of the N. Y. & Hudson Steamboat docks on the Hudson River (shipping facilities not to be surpassed); will be sold cheap, on easy terms. For particulars address
H. F. DERNELL, Athens, N. Y.

HAVE CONFIDENCE IN YOUR OWN ABILITY.

Unless you push yourself forward others will push you back. If you never try to do more than you have always done, you will never know how much you can do. Success will only smile on him who proves himself brave.

Believe in yourself. That is the way to make other people believe in you, and it is the way to become what you want to be. It is the people who have believed thoroughly in themselves and their missions who have made the world believe in them. Napoleon was a great general because it never occurred to him that he could lose. Luther changed the thought of Europe and the history of the world because he believed so thoroughly that he was right that nothing could daunt him. Columbus gained the support of a queen and found a world because his belief in himself inspired confidence in others.

One of the chief reasons why men fail in life is not for lack of talent or opportunity, but wanting pluck and perseverance, they halt at critical moments in the journey and are lost. Those who have reached the pinnacle of fame or who have accomplished wonders and great deeds, have done so by heading for the unknown shore, and, like Columbus, "sailing on," with no thought of turning back or abandoning the pursuit of the object sought to be attained.—*Salesmanship.*

THE FORMATION OF BOYS' GUN CLUBS.

From various sections of the country comes the welcome news that Boys' Rifle and Gun Clubs are being organized. This movement to instil both a love for the great "out-of-doors" and teach the "young idea how to shoot" is a most gratifying and wholesome tendency, and worthy of emulation wherever possible.

Give your boy a chance to enjoy nature by giving him a definite object in view. The average youngster is cooped indoors entirely too much—he of necessity requires a constitution that will stand him well in the wear and tear of life, and cannot do better than to roam the fields armed with a reliable firearm.

Again, the happy comradeship of a congenial gun club, tempered with the discipline the target shooting involves, makes a man out of the average boy. Shooting at a target brings back the rosy color of the cheeks, promotes a clear mind and vigorous health and inculcates such invaluable qualities as decision of character, deliberation and self-control.

The eminent Canadian publicist and statesman, Prof. Goldwin Smith, declared not many months ago, that "schoolchildren are being unduly rushed in their studies, and that the cramming system of endeavoring to impart knowledge is most detrimental to their health." Other trained observers and prominent educators have recorded themselves in the same positive tones, and the famous makers of Stevens rifles, pistols and shotguns, the J. Stevens Arms & Tool Co., Chicopee Falls, Mass., are pioneers in lending their vigorous co-operation and alert efforts to the great gun education movement which is galvanizing into activity the latent desire of every American boy to "own a gun and learn to shoot." The wise father encourages this healthy sign of the times, and Boys' Gun Clubs, Cadet Companies, etc., are more and more becoming an established reality.

The 1904 illustrated book of Stevens Facts (136 pages with colored cover design by A. B. Frost) describes the wide range of Stevens products, and embodies detailed information relative to shooting, ammunition, the choice of a firearm, proper care of same, etc., etc. Will be mailed anywhere for four cents in stamps to cover postage.

NATURAL SOAP FROM A TREE.

The Leicester Hosiery Trade Journal contains an account of an enterprise in Algeria to manufacture natural soap on a large scale from a tree known as "Sapindus utilis." This plant, which has long been known in Japan, China, and India, bears a fruit of about the size of a horse-chestnut, smooth and round. The color varies from a yellowish green to brown. The inner part is of a dark color, and has an oily kernel. The tree bears fruit in its sixth year and yields from 55 to 220 pounds of fruit, which can easily be harvested in the Fall. By using water or alcohol the saponaceous ingredients of the fruit is extracted. The cost of production is said to be small, and the soap, on account of possessing no alkaline qualities, is claimed to be superior to the ordinary soap of commerce.—Frank W. Mahin, Consul, Nottingham, England, May 4, 1904.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

OUR GASOLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.

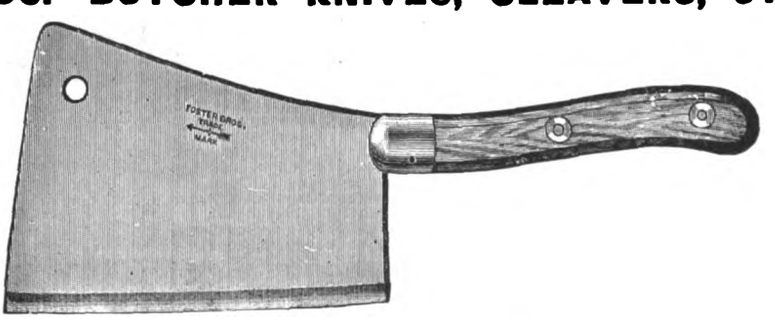
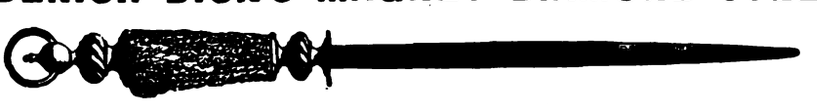
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us



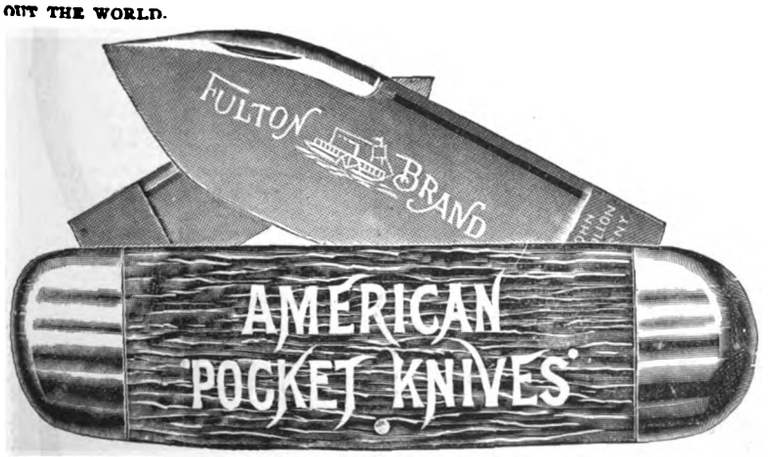
has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

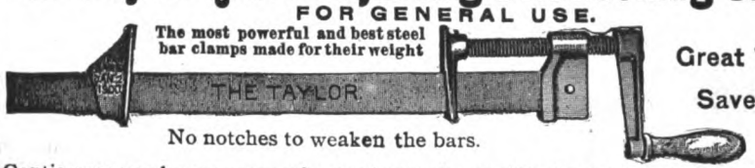
WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—



1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the friction and thus making machine so light running and almost noiseless.
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish**; the legs are solid with tub (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot suds, and cleaning them without rubbing them to pieces.
4.—This washer is made by **experienced mechanics**, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

Manufactured by H. F. BRAMMER MFG. CO.,
DAVENPORT, IOWA.

The Taylor Quick Adjusting Self Locking Clamp

FOR GENERAL USE.

The most powerful and best steel bar clamps made for their weight

Great Time Savers.

No notches to weaken the bars.

Continuous use by concerns who need superior quality, have proven these clamps to withstand the most severe tests and have been given preference over all others.

Send for booklet and learn more about them. JAMES L. TAYLOR, Newark, N. J.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

On exhibition at World's Fair. Ask for circulars and prices.

JOHN J. OLINGER, 1328 Webster Avenue, New York

"For Those Who Want the Best"

DOUBLE FALCON WRENCH

An inch and three-quarter off-set to allow work close to the wall or ceiling. Each one has two jaws, right and left hand. Made on an improved principle over the alligator wrench. Fixed and flaring jaws, the combination of the grasping jaw and serrated face, with the bearing jaw with straight bearing face. Grasps and releases a pipe with ease and certainty, the curved outline of the pipe finding a tangential bearing in all parts of the opening. The curved jaw first engages the pipe, and then the straight jaw slips under the pipe until jammed tightly into the opening between the jaws, the action being entirely automatic. A forging of the finest tool steel, teeth accurately milled, hardened in the best possible manner, polished and finished with cyanide.

HARDWARE

It is agreeable to note that the United States Geological Survey, by special congressional appropriation of $30,000, will carry on series of practical tests of American fuels in connection with the coal mine exhibits at St. Louis Exposition, under the direction of Professor J. A. Holmes, chief, assisted by Edward W. Parker, statistician. These tests will include investigations covering the steam-raising, gas producing and coke producing qualities. But what is of special interest to the great coal mining industry of the Western States is the utilization of the large amount of waste of bituminous, and the lignites of North Dakota, Utah, Colorado, New Mexico and Texas.

C. E. Jennings & Co., 42 Murray Street, under date of June 1st, have now ready for distribution their new catalogue. The volume is the most complete one representing the goods made and distributed by this leading house that they have published, and should be in the hands of all the leading dealers for purposes of comparison. It contains 150 pages, in the way of chisels and auger bits there are a number of new lines which are graphically illustrated. Representing as they do in this city the Southington Cutlery Company, the production of this well-known company form an important part of the contents of this catalogue, embracing as well such goods as steel squares, curry combs, wood screws, tire bolts, etc., etc.

E. H. Ould Hardware Co., Norton, Va., intend opening at once the best selected and assorted stock of Hardware, tinware, stoves, mill and mining supplies, wagons, farming implements, paints, etc., consisting of everything usually carried in a first-class wholesale Hardware business. With a large, commodious and conveniently located building, erected especially for the purpose, their facilities for handling goods will be unsurpassed. Catalogues and circulars from manufacturers in the above lines are solicited.

The Michigan Retail Hardware Dealers will meet in annual convention on August 10-11, the session being held in all probability at the Hotel Pantlind. The local retail associations supported by the local jobbing houses have taken in hand the matter of entertaining the delegates during their short stay; and as about 200 will be present, a happy and enjoyable time can safely be anticipated. Representatives from Hardware manufacturers from all over the country have signified their intention to be present and make demonstrations of their products from a convention point of view. The Committee on Entertainment is headed by Sidney F. Stevens, who was made chairman, a position he is well fitted for.

An attractive souvenir which the Lisk Mfg. Company, Limited, Canandaigua, N. Y., is distributing among its customers in all parts of the country is a neat little watch charm in gold and red enamel, with the name "Lisk" in black enamel. This charm is made in the shape of the company's trade-mark, a Maltese cross.

The Toledo Cooker Company, Toledo, Ohio, is making an attractive exhibit of its products at the World's Fair, St. Louis, the location of its display being in the Manufactures Building, 21 Fourth Street. The company makes the Ideal Steam Cooker, Ideal Vapor Bath Cabinets and other specialties.

F. E. Myers & Brother, Ashland, Ohio, the extensive manufacturers of Force and Lift Pumps, Hay Tools, etc., have not only a large home market, but also an export trade of gratifying dimensions. Wm. C. Barker, their general export manager, having his headquarters in the Produce Exchange Building, New York, during a recent visit to the works, was accompanied by J. P. Richardson, of J. P. Richardson & Co., Melbourne, Australia, who represents the firm in that country. In anticipation of next year's business, F. E. Myers & Bro. have recently contracted for an edition of 25,000 catalogues of 368 pages each, at a cost of $5,000.

E. P. Stoughton, vice-president of the Millers Falls Co., and manager of the New York house, accompanied by his daughter, sailed on July 2d on the Hamburg liner *Patricia*. They intend spending a portion of their vacation in Great Britain, but will visit many points of interest on the Continent, pleasure being their principal pursuit, although while abroad Mr. Stoughton will strengthen the business relations of their many representatives on the other side. They expect to return about September 1st.

A. G. KAUFMAN MANUFACTURING COMPANY.

On July 1st the business formerly conducted under the name of the Dolphin Mfg. Co., 24-26 Murray Street, was merged into the A. G. Kaufman Manufacturing Company, a closed stock company chartered under the laws of the State of New York, with a capital of $25,000. A. G. Kaufman continues as manager and treasurer and trusts that the pleasant relations heretofore existing will be continued in the new company.

TELEPHONES IN NEW YORK.

It is astounding to note the number of telephones in use in New York city. In 1893 there were about 9,000 in use; to-day there are over 132,000. In the last three years alone 76,000 have been installed. It can be readily seen that telephone service is becoming more and more an important factor in business equipment. The large growth of telephone service in that city is credited to expert equipment and the message-rate system.

THE SOUTHERN PACIFIC CO. MAKE SPECIAL RATES TO BUYERS.

The Southern Pacific Co. has this day announced to the Merchants' Association of New York that it will put in effect an individual special rate from Texas to this city for the Fall buying season. The special merchants' fare of one and one-third for the round trip over the Southern Pacific system in Texas will be in effect on July 30th-August 3d, inclusive, and August 20-24, inclusive, via the New Orleans gateway, on the certificate plan. The return limit on the certificates will be thirty days from date of issuance. The Southern Pacific Co. has also agreed to make the same reduced rate from points reached by its system in Texas in connection with water trip to New York from New Orleans on the Southern Pacific new passenger steamships. The special fare of one and one-third by rail and steamer also covers meals and stateroom while on board the boat. The Merchants' Association will send to Texas merchants in the course of a few days the circulars giving full particulars as to rates, routes, dates, etc.

"CHEER UP AND SEVEN OTHER THINGS."

If any man has made a study of advertising methods and how permanent success may be achieved by aid of them, surely that man is Charles A. Bates, the author of that voluminous work on the subject known as "The Art and Literature of Business," comprised in about 2,400 pages and covering every possible detail connected with commercial exploitation. His latest work recently published under the name of "Cheer Up and Seven Other Things," is immensely popular in an inverse ratio to its size, which consists of but 104 pages, but it contains eight of the most characteristic business talks with which the name of Charles Austin Bates has been identified, and is to be had for the limited amount of thirty-five cents. It is printed and bound artistically and is profusely illustrated. The titles "Cheer Up," "Making Good," "Making a Front," "Other People's Brains," "The Ill Fortune of Brother Bill," "Things That Can't Be Done," "And All Is Advertising," "How Shall a Young man Succeed," indicate the nature of the book. Rugged, straight-from-the-shoulder common sense is the keynote, yet the vein of humor running through every page makes it wonderfully entertaining.

NEW YORK BELTING & PACKING COMPANY'S NEW STORE.

The New York Belting & Packing Company are now to be found in their new quarters at 91-93 Chambers Street, which extends entirely through the block to 73-75 Reade Street, in which they occupy the street floor and two basements with a frontage of 50 feet on both streets and depth of 150 feet. The premises have been thoroughly overhauled, particularly the street floor. The woodwork is in polished quartered oak with natural finish. The business was established in 1846, and for the last eight years has been conducted at 25 Park Place, but with scarcely enough room to properly display samples of their large line of goods. Previous to that time they were a number of years in Park Row, opposite the Post Office. They manufacture all kinds of Mechanical Rubber, Goods, Belting, Packing, Hose and many kinds of Rubber Specialties. They also make Interlocking Rubber Tiling and Vulcanite Emery Wheels. One feature of the arrangement of offices and showrooms is a specially fitted room for the convenience of friends and customers, to the use of which a cordial invitation is extended. This department will be fully equipped with corresponding facilities, telephone service, etc., for customers visiting the city.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The midsummer dullness is upon us and in consequence daily sales do not foot up as satisfactorily by comparison as one could wish. The possible uncertainties of the Fall season form the problem facing the dealer, and the Presidential election while of much less importance than the old days when a man had to put in his stock six months ahead, is still a matter requiring deliberation in figuring how to be prepared if some indirect causes create a slump in general sales affecting everybody alike. All reports are believed to inspire the brightest hopes that our prosperity in that respect will not receive a setback. Good crops in their usual fulness, combined with the increased acreage which has been placed under cultivation, will more than offset the influence that may be exerted by the tumult attending several presidential elections.

Regarding trade prospects in general, there is abundant reason to feel satisfied with the apparent results, for while the season opened its most spirited campaign at a little later date than was anticipated, the footed-up results leave but little to yield adverse criticism. It is almost universally conceded that business, for the first six months in the year will in all probability, be found fully up to previous seasons. And then another thing is well worth looking at, no slumps of any moment are known regarding quotations, most of the few changes that are taking place are in the shape of advances running from five to fifteen per cent. on regular lines, while activity is shown in all summer lines that will result in few goods being carried over to another season on which even interest may be lost.

The fear entertained by some prophets that prices are apt to show a tendency toward a lower range refers only to those lines on which, by new combinations among manufacturers and new list prices, much higher prices have been obtained under the excuse of levelling up the lists No doubt, in some cases, this was done so that if at any time changes of the kind forboded were essential, the modified prices could stand it better than those which previously obtained. There will be no sudden and unaccountable breaks in the market prices that will have a tendency to unsettle present conditions.

Changes in the prices on raw material have evidently been availed of by manufacturers in regard to their export output, enabling them in many cases to secure a much more satisfactory profit than had been anticipated; and as our exports of manufactured goods in which Hardware is well represented show up record figures, this alone might indicate the belief referred to above, as being possible. We ought not forget while discanting on the price vagaries of our export trade, that when we "dump" goods abroad at prices at which our high protective tariff makes possible, through extravagant profits on home sales; it really is more sensible as to general results, than to seek a market here for our over production by simply ruining the domestic sales by a slump. Formerly this was often done, but more humane methods prevail at the present time and the home market is freed from spasms caused by undigested stocks.

EXPORTS OF MANUFACTURES EQUALLING AGRICULTURAL PRODUCTS.

Manufactures and manufacturers' materials form an unusually important factor in the figures of our foreign commerce during the month of May and, indeed, in those of the entire fiscal year. For the first time in the history of our foreign trade the value of manufactures exported during the month of May exceeded that of agricultural products. The total value of manufactures exported in May, 1904, was $38,894,561, against $37,891,838, the value of agricultural products exported. Ordinarily the value of agricultural exports is more than twice as great as that of manufactures exported.

There has been but one complete fiscal year in the history of our export trade in which the total exports of manufactures were even half as great as the total exports of agricultural products. In 1900 the value of manufactures exported was $433,851,756 and of agricultural products $835,858,123, so that in that particular year the value of manufactures exported was a little more than one-half that of agricultural products exported, but never before had manufactures equaled or exceeded the value of agricultural products in our figures of domestic exports.

This preponderance of manufactures in the exports does not by any means hold good for the entire fiscal year, the total of manufactures exported during the eleven months ending with May, 1904, being but little more than half the total of agricultural exports, but in the single month of May manufactures exported actually exceeded agricultural products exported by over $1,000,000.

Another striking fact with reference to manufactures in the foreign trade is that in the month of May the importation of manufacturers' materials came within a fraction of 1 per cent. of equalling that of all other articles imported. The total value of manufacturers' materials imported in May, 1904, was $39,565,215, and of all other articles imported $41,129,535, the percentage which manufacturers' materials formed of the total imports of the month being thus 49.03 per cent.

These records of the exports of May indicate very great activity on the part of the manufacturers of the United States. Of raw material imported for use in manufacturing the total for the month of May was 4½ million dollars in excess of May, 1903, while for the eleven months ending with May the total was but 5½ millions below that of the corresponding months of last year

Digitized by Google

—a year in which imports of manufacturers' materials exceeded by more than 50 million dollars those of any earlier year. In partially manufactured materials for use in manufacturing the imports of the year show a material reduction—from 149 million dollars in the eleven months ending with May, 1903, to 125 millions in the corresponding months ending with May, 1904, but in raw materials the drop is only from 301 millions in eleven months ending with May, 1903, to 296 millions in 11 months ending with May, 1904.

It is now quite apparent that the exports of manufactures for the full fiscal year will exceed those of any preceding year in the history of our commerce. In the eleven months ending with May, 1904, they amounted to 410 million dollars, in round terms, and as the single month of May showed a total exportation of 38 millions it is beyond question that June will add a sufficient amount to bring the total for the year past the high-water mark of $433,851,756 made in 1900.

INCREASING COMMERCE WITH CANADA.

Exports from the United States to Canada will be larger in the fiscal year about to end than in any preceding year. Reports just prepared by the Department of Commerce and Labor, through its Bureau of Statistics, show for the ten months for which figures are already received total exports to Canada amounting to 104 million dollars, against 98 millions in the corresponding months of 1903 and 89 millions in the same months of 1902. Going back to 1897, the year in which the Canadian reduction in tariff on imports from the United Kingdom went into effect, the figures of our exports to Canada during the ten months ending with April, 1897, are $51,903,579, or but one-half those of the ten months ending with April, 1904.

The Canadian reduction of duty on imports from the United Kingdom and certain of its colonies began in April, 1897, with a reduction of 12½ per cent. In 1898 this reduction was increased to 25 per cent., and in 1900 to 33⅓ per cent., and has so continued up to the present time. A table showing the total exports from the United States to Canada, covering a term of years, indicates that there has been a more rapid growth in exports to Canada since 1897 than at any period preceding that year. For the full fiscal year our exports to Canada were, in 1874, 41 million dollars; in 1884, 44 millions; in 1894, 56 millions; in 1897, the year in which the Canadian reduction of duty on imports from the United Kingdom occurred, 65 millions, and in 1904 seem likely to be nearly or quite 130 millions, and will exceed those of any preceding year.

Of imports into the United States from Canada the total for 1874 was, in round terms, 34 million dollars; in 1884, 38 millions; in 1894, 31 millions, and in 1904 will be about 48 millions.

Comparing the growth of Canadian imports from the United States and the United Kingdom since 1897, the Canadian figures show imports for consumption: From the United States in 1897, $61,649,041, and in 1903, $137,605,195; from the United Kingdom, in 1897, $29,412,188, and in 1903, $58,896,901.

The table which follows shows the exports from the United States to and imports into the United States from Canada in each fiscal year from 1895 to date, the figures for 1904 being those for ten months only:

Year ending June 30—	*Exports to Canada.*	*Imports from Canada.*
1895	$52,854,769	$36,574,327
1896	59,687,921	40,887,565
1897	64,928,821	40,309,371
1898	83,714,086	31,870,486
1899	87,974,961	31,220,967
1900	95,319,970	39,369,074
1901	105,789,214	42,482,163
1902	109,642,993	48,076,124
1903	123,266,788	54,781,418
1904 (10 months	104,164,521	41,312,214

EASTERN NEW YORK AND VERMONT ASSOCIATION.

The Eastern New York and Vermont Hardware and Iron Association held its quarterly meeting at the Edison Hotel, Schenectady, N. Y., on Thursday, June 23d. The principal features of the session were disposing of a sumptuous banquet, and a general discussion of trade matters by the various members. James L. Dunn, of the firm of McCormick & Dunn, Troy, N. Y., is the president of the organization, and Charles H. Turner, president of the Albany Hardware & Iron Co., is secretary.

A thing of beauty is a joy forever—unless the cost price leaks out.

A CENTURY-OLD CATALOGUE.

Written for HARDWARE.

"No. 516."

This is the brief, meaningless title of a Hardware catalogue of a century ago. No other sign or letter on the marbleized paper covers or two score pages of the book gives any idea of the classification of the book, its origin, its printer, publisher, or owner. The No. 516 is neatly written in on the inside of the cover.

This catalogue is but one of many of its kind in a musty corner of the library of the Essex Institute, in Salem, Mass. Whatever the story, the fame, or failure of the makers of these catalogues, and of the quaint pieces of metal workmanship therein enrolled, it is lost to the busy, inquisitive world of today. Some painstaking clerk took the trouble to write in, with old-fashioned rusty ink, the numbers of each catalogue, and one bears the faded date, July 19, 1806. Others contain revised price list, and revised discount rates, carefully written in, but nowhere about the musty old books is a scratch, or a hide or a hair to show who might have handled them, or what enterprising firm might have published them. Methods of advertising have indeed changed since these old days, when the Hardwaremen made their goods speak for themselves.

A number of quaint and interesting features were noticed by the writer as he perused the faded pages. Unusually good paper was used for the catalogues, and each page is carefully marked in script P 1, P 2, P 3, etc. Wood cuts are generously used to portray the goods offered. Indeed, in some of the catalogues there is no words whatever outside the price list, nothing to call attention to the excellent qualities, the superior merit, and novelties or other features which a modern Hardwareman would not be slow about booming for all the worth of all the printers' ink he could buy.

No. 516 is labelled "Cast Iron Book," but this is apparently a misnomer, for the opening pages contain pictures of brass and iron pulleys. Then comes a page of brass headed nails, each nail carefully pictured in full sizes, and marked 1, 1¼, 1¾, 2, 2¼ and so on up to four inches long. Lath nails, bills and sailor palms, the latter being a device whose full picture even failed to illuminate the mind of the writer as to its purpose, shutter screws and other little devices popular among the grandfathers are generously pictured.

A dozen and more pages of the quaint catalogue is given over to door plates, and the wooden-looking pictures reveal an ancient art that is a composition of the awful grandeur of the heroic age of Greece, the beauty of the Raphaelites, and the practicability of the 18th century. Huge lion's heads, fierce looking tiger's maws, and faces of fiery looking creatures, both of the kingdom of man and animals, are among the striking devices on the door plates and knockers contained in this catalogue. Perhaps they were intended to scare the burglars away. There are also plates bearing women who invited consumption and pneumonia on cold days because of the scantiness of their apparel. Other funereal-looking plates look as if they might have been intended for the door of the sanctimonious neighbor across the street, where they would weep at the gracelessness of the women unadorned upon the knocker of the opposite door.

"New thumb pattern latches, Norfolk patterns" was an inscription which caught the eye of the writer, for they faintly recalled their prototype, the old latch upon the back door of his grandfather's home. Cast-iron barrel night bolts, and sash locks and hooks and eye looked as if they might have been excellent burglar-proof devices in the days before Mr. Burglar reduced the use of the jimmy and nitro to a science.

Another peculiar feature of this ancient catalogue are the pages devoted to "cast iron kitchen furniture, tin'd." Evidently, in olden times, the Hardwaremen carried a line of pots and kettles, for the list included oval pots, round pots, fish kettles, water boilers and other wares of the kitchen. Judging from the pictures of these utensils, they were for use in the open hearth.

Scale weights, in sets from 1 ounce to four pounds, smoothing irons, and patented shovels and tongs at code prices were also included in the catalogue, but the list of the latter articles was carefully written in on the margin of the last page. Possibly it was cheaper to revise catalogues by writing on their margins than to get out new ones in these olden times.

The next book in the collection is labelled "Book 22024," and this title is also written in with rusty ink, "10 p c discount" is another inscription of the catalogue on the inside of the cover, which undoubtedly attracted the shrewd buyers. This catalogue contains pictures and prices of candle sticks, carriage and house bells, club stick nobs, peppers and salts and savealls.

The next catalogue is labelled in ink, "No. 509, Steel Toy book Dis. 5 per cent." The steel toys, as far as the writer could understand, were few and far between in this catalogue. A steel cat was the first device pictured in the book, and the first sticker

Digitized by Google

for the writer. Undoubtedly it was a cat, for it was so labelled. But it had six legs, each 7½ inches long, and no self-respecting pussy has more than a quartette of legs, even for her nine lives.

But in this steel cat each leg was driven into a steel sphere, so that in whatever position it might be placed, three of the legs formed a tripod upon which the whole rested.

A tuning fork, a jews harp, folding button hooks and a stocking plier are among the unique Hardware goods pictured in this catalogue. Many pages are given over to nut crackers, and they are in many fanciful designs. Curling tongs are pictured in such profusion that no well-stocked Hardwareman of olden times could fail to supply on demand utensils for making anything from a chink's cue to a head of "frou frou" curls.

A ladies' back board and collar was a device that puzzled the writer. It consisted of a staight iron rod, a harness and a collar, "covered with red morocco," the catalogue said. After considerable puzzling, the writer came to the conclusion that the Hardwareman antedated the Royal Worcester corset man, and that the "ladies' back board and collar" was worn strapped to the back and over the shoulders to guarantee an erect carriage. It was an instrument of torture if used for this purpose, but then, the health culturists say that modern fitted corsets are worse than that. Besides, an historical friend told the writer that, in olden times, society girls were made to sit erect for hours at a time in straight back chairs, sometimes strapped in so that they would gracefully carry themselves in society. But, fortunately, times have changed, both for the Hardwareman and the society girls.

Some folded-in pages of the faded books No. 509 contained a description of "Gentlemen's Oak Tool Chests of different sorts as follows:"

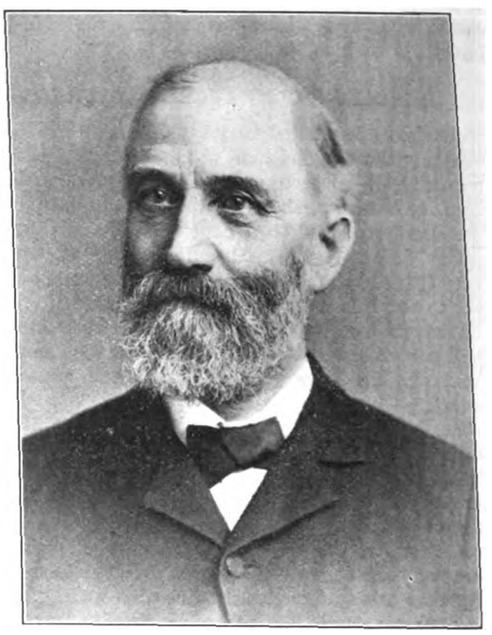
Six different sorts of chests were described, and Chest No. 1 contained "A hammer, hatchet, saw, pair bright nippers, mallet, two-foot rule, 6 gimlets, sorted, 3 brad awls, 2 turn screws, 1 file and 1 rasp with handles, 3 firmers and a gouge."

Chest No. 6 contained "A hammer, saw set, pair bright nippers pincers, pair cutting nippers, 2 pair bright pliers, 1 hand vise, 2-foot rule, pair steel compasses, pair rack compasses, 1 striking knife, 1 brad punch, 4 brad awls, 6 gimlets sorted, 3 turn screws, a claw wrench, 1 bright chisel and sundry partitions containing a great variety of nails, wood screws, brass work, etc. In a draw is contained a brace and 12 bits assorted, a small pick iron, a bevel and square, a spoke shave, a line and roller, 5 files, 1 rasp and key hole saw.

Mahogany tool chests for "gentlemen" are also advertised, as are sportsmen's tool chests shows which contained many implements of gunnery.

But, though these chests are quite minutely described, yet their selling price is unnamed, a space in which the same was to be written in being left blank. Nor is given the name of the manufacturer, or the place where the chests might be obtained.

In fact, the origin of the musty old volume is probably lost for all time. They might have been issued by an old English firm for distribution in this country, or they might have been published by some enterprising American firm. The antiquarians, however, believed them to be of English origin, and that they were sent to this country when American mechanics depended on the English manufacturers for their tools and Hardware.



F. A. G.

DEATH OF C. S. MERSICK.

Charles Smith Mersick, head of the Iron, Steel and Hardware house of C. S. Mersick & Co., New Haven, Conn., died at his home in that city on the 24th of June, from heart disease. He was in the 64th year of his age. Mr. Mersick was born in New York, December 18th, 1840, and was connected with the Hardware business from his early manhood, mostly in New Haven. Becoming associated with the old firm of English & Atwater, he afterward went into business with Nelson Hotchkiss, under the firm name of Hotchkiss & Mersick; subsequently the firm become C. S. Mersick & Co. Mr. Mersick was president of the Merchants' National Bank of New Haven from 1889 to the time of his death. He was prominent in the disposition of public affairs, and from 1899 to 1901 he was State Treasurer of Connecticut. He was a member of the Quinnipiac and Union League Clubs of New Haven, and of several other organizations. He was an active member of the Center Church, and for many years served on the Church Committee. He married Ellen Louisa English, a daughter of George D. English, in 1865. Mrs. Mersick died in 1894. One daughter, Mary E. Mersick, survives him.

DEATH OF JOHN TIEBOUT.

John Tiebout, president of W. & J. Tiebout, died at his country home at Manasquan, N. J., June 26, of heart failure, in his seventy-seventh year. Mr. Tiebout had been actively engaged in the business in which his life was spent until very recently, when he had shown signs of impaired health. The business, that of Marine Hardware for ships and yachts, was established by him in 1853 at 197 Lewis Street, New York, that section of the city then being the active center of an important shipbuilding industry. His father, William Tiebout, a retired salt merchant, was admitted to a full partnership in 1860, father and son conducting a prosperous and successful business under the firm name referred to until 1873, when William Tiebout died, the son continuing the business under the firm name until 1892, when the business was incorporated, at which time William H. Force, J. Edgar Coon and John Tiebout, Jr., a son, were admitted to an interest, they having been 42, 31 and 24 years, respectively, associated with him, reckoning to the present. This concern was the first to largely extend the line of goods kept in stock, formed of galvanized iron

JOHN TIEBOUT.

and brass, expressly for ship and boat building, for which their superior knowledge of the possible requirements made them extremely popular. They were the pioneers in classifying and cataloguing this line of Marine Hardware, for many years almost monopolizing the trade.

Mr. Tiebout was born in New York City and on the maternal side was a grandson of Eleazer Crane, a soldier of the Revolution, who as a British prisoner suffered death by incarceration in the old sugar house used at that time for prison purposes, and located at what is now the corner of Rose and Duane Streets. Mr. Tiebout was a gentleman who was loved by all who knew him, the serenity of his mind speaks in his portrait. Generous and of humane temperament, extremely methodical and systematic in business matters, he was of inflexible integrity and possessed of a high sense of honor. In the long years devoted to his business he passed unscathed with flying colors through the several financial disturbances that unsettled mercantile circles. His aid was sought for high positions among those who knew his great merit and esteemed him for his business acumen. Mr. Tiebout was a member of the Board of Trade and Transportation, had been a trustee of the Dry Dock Savings Bank for many years, and for two years was its president. He was also for nine years a member of the General Society of Mechanics and Tradesmen and was a prominent member of the Marcy Avenue Baptist Church, in Brooklyn. Mr. Tiebout is survived by a widow, son and three daughters.

A NEW DEPARTMENT OF BUYING.

W. B. Fox & Brother, 97 Chambers Street, New York, are desirous of receiving manufacturers' catalogues along the line of Railroad Supplies and Heavy Hardware, especially in steam specialties, packings, water works, plumbers' supplies and machine tools, the firm having organized a new department for buying goods coming under the above heads and in mill and factory supplies. The manager of the department, M. B. Bass, for nine years conducted the supply department in this city of Dunham, Carrigan & Hayden Company, of San Francisco. W. B. Fox & Brother have for thirty years and over bought general Hardware for clients of theirs, both in this country and Europe.

RECENT TRADE PUBLICATIONS.

EUREKA FENCE MANUFACTURING COMPANY, Richmond, Ind., have issued an illustrated catalogue descriptive of the products of their factory, which includes field and ornamental fence, fence machines, corn planters, fence supplies, grape arbors, umbrella holders, etc. They state regarding the make-up of these goods that quality is uppermost in their minds; price, which is at all times a consideration being a secondary matter only, and with quality considered, their goods will be found as low in price as it is possible to produce them. The first illustration in the above book is one of their latest style field fencing in the roll. They state as their opinion that it is unquestionably the best field fence on the market, it being a cable fence, which of course is not affected by temperature like the single strands of either coiled spring, crimped or straight wires. They claim their "M. & G." fence will not sag, buckle or bag, or get out of shape like single wire fences. One of the main features of the fence is, it can be erected on hilly or uneven ground and every wire will be stretched perfectly tight, the stays remaining perpendicular the same as on level ground—a feature, they claim, not found in any other woven wire fence. It is made in heights as follows: 41, 48, 54 and 60 inches. Send for one of their catalogues which describes and illustrates their entire extensive line of goods.

THE MAGNOLIA METAL COMPANY, New York, Pittsburgh, Chicago, San Francisco, Montreal and Boston, have recently sent to their patrons a copy of their latest catalogue. This is a "handbook of useful information for engineers and mechanics who do the pouring," and is an attractive book of 48 pages, well printed on coated paper. The book cites many instances where tests have been made to compare the quality of Magnolia Metal with other standard metals, and in no instance has the Magnolia been "found wanting." Interesting tabulated statements of these tests are found on the last pages of the catalogue. They give as reasons why Magnolia metal is cheapest and best: It is a self-lubricating graphite and anti-friction metal; it shows the lowest co-efficient of friction; it wears longer than any other metal; it saves oil and cheaper oil can be used; it saves the heavy expense incident to re-babbitting; it saves fuel, as there is less resistance to overcome; it saves the machinery, as there is less wear on the journal; it saves the loss incident to shutting down to re-babbitt; it costs less than the "Genuine Babbitt;" it will never cut or score the journals; it imparts to the surfaces of journals and bearings a smooth and mirror-like polish. This book contains much information that will be found valuable to those interested in this subject.

W. H. SWEENEY MANUFACTURING CO., No. 66-72 Water Street, Brooklyn, N. Y., are the authors of an illustrated catalogue and price list of nickel-plated ware which they manufacture, consisting of "Royal" and "Berlin" nickel-plated ware and Carpathian trays. This catalogue annuls all previous lists, discounts and quotations heretofore issued by them. They have recently added very extensively to their list of manufactures, especially in the line of copper, brass and nickel-plated ware; also a very large line of metal trays and new designs in tea and coffee pots, and these are all fully illustrated in the above-mentioned catalogue. With a larger factory, increased force of workmen and improved machinery, they are enabled to produce more perfectly finished goods, and more promptly than heretofore. Included in the contents of their catalogue are tea and coffee pots, tea kettles, spoon holders, sugar bowls, pitchers, cuspidors, trays, crumb trays, pudding and chafing dishes, smoking sets, bathroom fixtures, wash boilers, etc., etc. A copy of this excellent book will be sent to those interested, upon application.

THE TAPLIN MFG. CO., New Britain, Conn., have issued an odd catalogue in the form of three circulars, folded one inside the other, and each one smaller than the one in which it is folded, and the whole enclosed in an attractive red cover. The first circular illustrates and describes their Improved Dover Tumbler Egg Beater or whip for beating eggs or mixing any liquids in a tumbler where quick work and thorough mixing is required. It is long enough to use in the longest soda glass, and small enough for the smallest tumbler. It is made in two finishes, regular and electro tinned. The next circular exploits, with a cut of actual size, their Mammoth Improved Dover Beater and Mixer No. 300 for use in hotels, confectioners, caterers, bakers, etc., and is warranted in every particular. The third circular is devoted to their Dover Pattern Improved Egg Beaters, made with all-iron handles and in four sizes, viz: No. 60 or small size; No. 75 or family size; No. 100, family size, with handle slightly heavier than No. 75; and No. 150 or hotel size. All, with the exception of the No. 60, are made in the two finishes as above, and are all illustrated in actual size. A small circular attached calls especial attention to the No. 75, of which the agitator is exactly the same as No. 100, the handle being only a little lighter. This they claim to be a great seller. Their catalogue will be forwarded upon request.

THE NATIONAL SWEEPER COMPANY, Marion, Ind., have distributed among the trade a four-page folder to which is attached a *facsimile* of the guarantee card which is sent with each "National Queen" roller bearing carpet sweeper—an all-convincing argument of their durability and efficiency in every particular. The folder states that the National roller bearing carpet sweepers for 1904 will be equipped with new and unique patented features that place them still further in advance of other makes for practicability, efficiency and general good quality, for which they are so well known. The cover of the folder is attractive, being a picture of a man throwing a tub full of money into the ash barrel, and over it the wise precaution: "Don't do it." This we presume is to suggest a moral—"Buy National Sweepers."

BADGER BRASS MFG. CO., Kenosha, Wis., have distributed an attractive catalogue devoted to a description of their Solar Lamps for motor cars, cycles, motor cycles and motor boats, also illustrating the same. The book contains 36 pages and is high-grade in every respect, being well printed on heavy coated paper and finely illustrated. They state that in presenting their 1904 models of solar cycle, motor and launch lamps they feel confident the intelligent and discerning will, after comparisons and tests, recognize the superior product of the old and largest makers of acetylene lamps in the world, referring to their scientific construction as proof of their not being experiments, having sold over one-half million of them. The Solar line for the coming season comprises their gas cycle, oil cycle, gas dash, motor, automobile, triple top oil side, and tonneau tail lamps; Phare Solar headlights, generator lamps, motor searchlight, launch headlight, motor boat searchlight and many others, all of which are admirably illustrated in the above-mentioned catalogue, some of which are given with sectional views. They also make an extensive line of brackets, lamp covers, etc. All lamps of their manufacture are fully guaranteed to be as represented. Catalogue will be mailed upon request. Also enclosed in the catalogue is a circular exploiting their Kenosha Auto-Jack, which they claim lengthens the life of tires when the car is idle, and makes possible quick and easy repairs on the road. No ratchets, pawls or catches to operate in raising or lowering, but always automatically locked either way.

JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J., have recently issued a number of pamphlets, among which is one devoted to Dixon's Graphite Cup Greases, which is a neat envelope-size booklet of 12 pages impressing upon its readers the importance of selecting the proper lubricant in the way of grease for different purposes in order to secure the best results. Another booklet is devoted to Dixon's Ticonderoga Graphite Grease, which they claim is superior to any plain grease for all heavy work. To meet general requirements, the Dixon Company prepares a variety of excellent Graphite Greases and also manufactures many special greases for special purposes. Only two of these are described in this little book, but full information regarding their other productions will be supplied to those interested. A larger and more elaborate book is one entitled "Graphite as a Lubricant," scientifically and practically considered, with notes upon its manifold usefulness as an accessory for engineers. Included in the contents are discussions on the following: Friction and Lubrication; Graphite, Scientific Opinions and Tests; Practical Experience with Dixon's Graphite; Ways of Feeding Graphite; The Sphere of a Graphite Bearing Metal; and Dixon's Pure Flake Graphite. It will be seen from the above subjects how valuable a book this is for those who use Graphite.

ROGERS & BROTHER A-1, Waterbury, Conn., have issued another of their handsome catalogues and price-lists, exploiting their Knives, Forks, Spoons, etc., of the Star brand. This is their catalogue No. 76, and supercedes all previous lists. The goods made by this company have been so universally imitated, as has also the style of packing, etc., they have, in order that dealers may readily distinguish the genuine "Star" Rogers & Brother A-1 goods, given exact *facsimiles* of their package, etc., in the above book. They desire to emphasize their trade-mark on Flat Ware and to call particular attention to the star as an important distinguishing feature of their goods.

HERRING-HALL-MARVIN SAFE CO.

The Herring-Hall-Marvin Safe Co., 400 Broadway, New York, whose advertisement will be found on page — of this issue, are the leaders in the safe industry in the United States and are without a rival abroad. The reason for this supremacy among safe makers, demonstrated so thoroughly in the recent conflagration in Baltimore, is given in detail in the description of their methods and material which are given at length in the following description:

To construct a safe that will absolutely preserve its contents requires a scientific study of the effects of fire on safes and safe construction.

In the body construction steel is used wherever possible: a solid one-piece angle frame front and back, which will not break apart the top, bottom, and two sides all in one piece without crack or joint to break apart; rivets wherever used put close together as in a boiler; back of safe set inside of angle frame so it cannot be pulled out; door jambs extra heavy; inside lining of safe sheet steel.

In door construction flanges are extra heavy and have their improved method of tenon and groove, preventing the jambs from being forced away or apart from door, also acting as a sealing device against the heat forcing its way through the cracks. This is the strongest possible construction. Outside door plate is heavy re-rolled plate steel strongly riveted to flanges. Inside plate is sheet steel securely fastened; hinges strong and non-breakable, with easy motion. The bolt work is purposely made stronger than the door, and is placed in direct contact with the solid steel angle frame, which insures against the door bursting out in case the safe falls from a great height. Fit of doors as close as possible, without binding, giving least open crack.

THE HERRING-HALL-MARVIN SAFE.

The locking device consists of their well-known combination lock with three tumblers, each with one hundred numbers plainly stamped and easily set on any one of the one hundred numbers, giving the lock over 1,000,000 changes or sets of combination numbers, any one of which the owner may himself select and set it upon. If the combination in use becomes known to any one, change it and it becomes a new lock. A key lock, with a duplicate or false key in the possession of an outside party, is utterly worthless as a means of security to the owner, as a key lock cannot be changed; the door would have to be sent to the manufacturer to have a new lock put on. A discharged clerk can take a duplicate key with him; with a combination lock simply change the combination, and he cannot unlock it with the old set of numbers.

As to security, the lock is your own always; it is protected from being drilled open by a highly tempered steel plate covering the lock and all its connections. The spindle cannot be driven through nor pulled out; if, by any means, the lock should be broken off, the door cannot be opened, because it is checked automatically by a device which is released the minute the lock is broken. This device has saved thousands of dollars, and is positive in its workings. The bolt work and lock operate independently, consequently the lock cannot be forced that way.

Fireproofing is one of the most important features of safe construction and one which may easily be slighted, not being exposed. They have given this part of the safe more hard study and more severe tests than any other part. The fire-proof filling in the walls of their safes is positive, and it is dry. The books and papers will not become mildewed nor mouldy. This is a secret composition, and it is on this that their reputation has been principally founded. A finely finished safe may still lack this very important feature.

The interior arrangement of each safe is divided and partitioned in accordance with the requirements of the majority of the people who have bought safes. The stock arrangement can be changed, however to suit individual requirement. They use especially prepared wood; wood is a non-conductor of heat when protected from flame.

They take pride in making an article pleasing to the eye, and an ornament to any office or finely furnished house. All exposed parts are polished similar to a piano. The ornamentation is neat and embellishes without being gaudy. The stock finish is black enamel.

In regard to burglar-proof compartments times change; new explosives and mechanical devices continually necessitate radical improvements. The burglar-proof chest a few years old is not proof against the burglar who knows how to use nitro-glycerine. To-day it is necessary to construct the chest strong enough to withstand several charges of nitro-glycerine or dynamite; this has been accomplished by a special brand of Herring steel, which successfully withstood a tensile strain of 189,000 pounds at the government arsenal at Watertown. By a patent gooseneck crane hinge and pressure system they seat the door squarely upon the jambs, which permits a perfect metal contact all round, making a close fit; in addition to the system of tongue and grooves, they pack the grooves with a specially prepared packing, making the joints proof against liquid explosives. The bolt work to hold the door closed is purposely made stronger than the door because it has to take the shock of all explosives that may be used. The locking device is mechanically perfect and next to impossible to get out of order. The aim is to make a compartment which cannot be opened by explosives from the outside; to make the door fit so that explosives cannot be inserted through the cracks; to have the steel of which it is constructed so hard that it cannot be drilled.

Guarantee.—The reputation of the company, the result of over sixty years of manufacturing nothing but strictly first-class work (making but one grade of safes—they will not make second quality goods) is a guarantee that in placing orders with them you will receive the best that the market can give. Knowing that they use the most modern methods and materials, and employ the highest skilled labor

THE COLDWELL CONTEST TO DEVELOP INVENTIVE ABILITY.

In pursuance of a plan to inaugurate a contest for the purpose of stimulating the inventive faculties of the young men of Newburgh who are students of the Manual Training School of that city, Thomas Coldwell, president of the Coldwell Lawn Mower Company early in the year offered six cash prizes. In the competition which took place recently, fourteen participated and submitted evidences of their inventive ability, fully demonstrating the feasibility of this original idea of Mr. Coldwell's, bearing excellent fruit. E. T. Moore, who won the first prize, won also the fourth prize, both of which had reference to the application of electricity, being improvements on an electric rheostat and electric bell system respectively. A spindle design and paper cutter for use in the drafting room received the fifth and sixth prizes, being won by Joseph Taylor. The success achieved in this trial trip will undoubtedly be followed by greater activity in the future and eventually prove the wisdom of the plan pursued, founded as it was on Mr. Coldwell's personal experience possessing as he does inventive ability of a high order.

BATHTUBS OF GLASS.

No longer can the cleanly, hygienic porcelain bathtub be reckoned the leader in bathtubs, says the *Brooklyn Eagle*, for this essential household requisite has now a rival—an importation from Germany. This latest development in bathtubs is of glass, thick plate glass, and moulded in one piece. Of course, in the homes of the very wealthy there are bathtubs of much more costly material than plate glass, but this newest comer is designed for common use, the same as the porcelain type. There are not very many glass tubs obtainable as yet, but those that have arrived are attracting attention, particularly from feminine observers, for the glass looks so bright and clean and fresh.

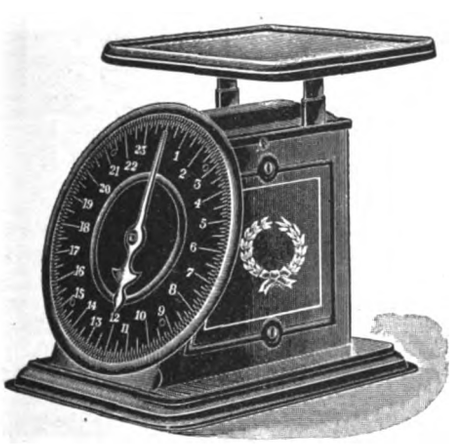
NEW GOODS AND SPECIALTIES.

JOHNSON TRAYLESS TACKLE BOX.



The Merriam Mfg. Co., Durham, Conn., are introducing to the Hardware trade who are now largely adding fishing tackle to their present assortments, the John Trayless Tackle Box, of which we give an illustration indicating its manifest utility and practical convenience. It will be seen that this new box will hold about everything needed for fishing gear, and in the most compact and convenient space. A single motion opens the box flat from the center, in the manner of a suit case and the entire contents are then at your instant disposal. The double sections are each 11x5½x2 inches, in the bottom part of which are ample spaces designed for reels and similar fixings, while the lighter tackle, such as snells, hooks, etc., go in the pockets of the upper compartments over which a hinged lid with handy side fastening shuts down to hold all in place. Between the sections there is room for fly book, extra coils of line, etc. This box has a good tumbler lock with two flat steel keys, and for additional convenience in carrying it about, has an entirely new fastening device which is not shown in cut, which closes over the lock escutcheon and holds it firmly shut without the necessity of using the key for the purpose. This new addition to the working outfit of the diciple of Izoak Walton will prove popular and command a ready sale.

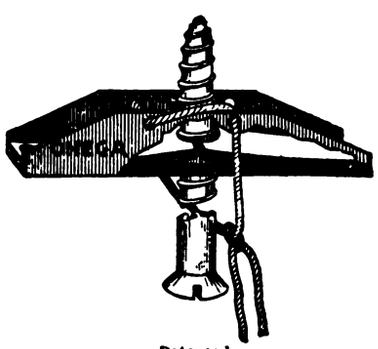
JOHNSON TRAYLESS TACKLE BOX.

TRINER IMPROVED COUNTER AND FAMILY SCALE.

A new and greatly improved counter and family scale has just been put on the market by the Triner Scale & Manufacturing Co., 1255-9 W. 21st Street, Chicago. The greatest improvement is in the dial, which, as the cut shows, sets at an angle and can be clearly seen and read without stooping. Another important change from the old styles of such scales is the placing of the regulating screw inside the frame. This screw is held by a locknut that will always keep the indicator in its true position once it is adjusted. The opening through which the screw is reached is in the back of the frame and covered with a steel slide, not allowing it to be tampered with. This complies with the city ordinances in many places, and these scales can now be tested and stamped by the city sealers and weighers, and used for counter purposes. They are made throughout of the highest grade of cold rolled steel, no castings whatever being used. This makes them light and strong. Finished in heavy black enamel, tastefully decorated, they make a very handsome scale for counter or household use. They are also made with brass dial and tile platform.

TRINER IMPROVED COUNTER AND FAMILY SCALE.

STERLING EMERY WHEEL DRESSER.



The emery wheel dresser herewith illustrated has cutters made of high carbon tool steel, tempered so as to prove not only more durable and serviceable, but more economical, than case hardened cutters. The handle is made of stamped steel, strong and light, there being no dead weight to tire the workman. The cutters revolve on an axle pin of hardened tool steel. The cutters are put up in sets of four, with two washers, each set being neatly boxed in a small carton, 100 of these cartons packed in a box, and are offered by the Diamond Saw & Stamping Works, Buffalo, N. Y. The manufacturers are receiving orders freely from jobbers in territory from Portland, Maine, to Portland, Oregon, and are also exporting them in considerable quantities to the continent of Europe. This new Emery Wheel Dresser will commend itself as a desirable line to every dealer carrying a stock of high grade mechanic's tools, and as this line, in common with the "Sterling" brand of Hack Saw Blades and Frames, is sold exclusively through the jobbing trade and at one fixed price, therefore the wholesale Hardware trade ought to have confidence in handling them. The Diamond Saw & Stamping Works, of Buffalo, N. Y., will cheerfully send catalogues in response to any inquiry. We recommend our readers to write for them, as they ought to be in the hands of the buyer for every responsible house.

STERLING EMERY WHEEL DRESSER.

THE OMEGA TOGGLE.

The New Jersey Foundry & Machine Company, 9 Murray Street, New York, are placing upon the market the Omega Toggle, designed for use in hollow brick, tile, etc.; an illustration of this Toggle we give herewith.

THE OMEGA TOGGLE.

The Toggle head is fitted with adjustable springs to fit different threads. Ordinary wood screws, either No. 10 or No. 12, of any length desired may be used. No nuts are required and there is no cutting to be done. Round or flat head brass, nickel or bronze screws can be used.

Two springs are riveted on each end of the head, and meet in the center over the hole the screw passes through. The ends of the springs are punched out in a semi-circle, the four springs engaging the thread and body of the screw, clamping it tightly with an outward stress; the screw may be pushed in or screwed in or out with the fingers, but cannot be pulled out. The string is used to hold the head in the wall while the screw is being adjusted.

THE ENGLISH MODEL STEVENS RIFLE.

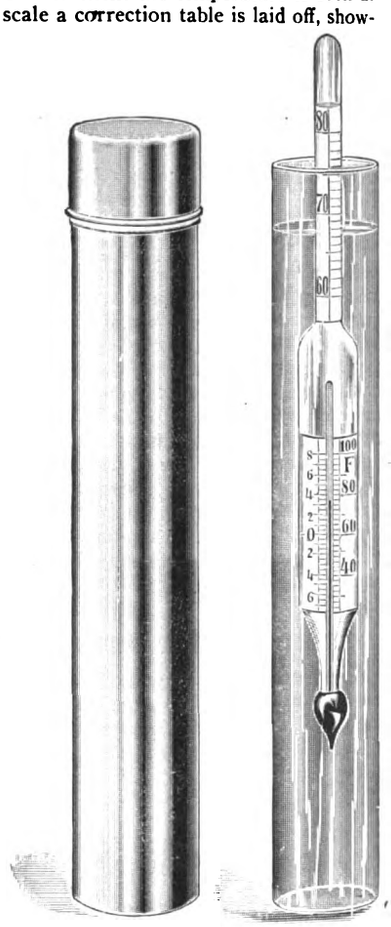
Dealers can now take orders for the new Stevens "Ideal" English model rifle No. 044½, which was illustrated and described in that company's new catalogue, but was delayed for delivery by some mechanical difficulty until July 1. This is the handsomest rifle of plain finish and low price so far made by the J. Stevens Arms & Tool Co., and is destined to become very popular. Its lines are similar to those of the regular No. 44½ Ideal. It has drop-forged frame and the new sliding breech-block action.

STEVENS "IDEAL" NO. 044½.

The butt-stock is rather broad and has a neat checked rubber butt-plate of the shotgun pattern. But the barrel will please shooters. It is half octagon but beautifully tapered, 24 inches long for all rimfire and 26 inches long for all centrefire cartridges, the weights, 5¾ and 6 pounds, respectively. It is made for all the rimfire cartridges and all centerfire ammunition of .32 (Ideal) calibre and smaller. There is a bead front and a Rocky Mountain rear sight. The trigger is plain, but set triggers as well as full octagon barrels and other changes will be made to order. The list price of the rifle is $12. This company now has its own wholesale depot in London, and the new rifle was designed to meet the ideas of rook and rabbit as well as target shooters in Great Britain, where crescent buttplates and heavy barrels are objected to. Visitors to the World's Fair should not fail to look for these new rifles at the company's space in the Manufacturers' Building.

WINCHESTER "THUMB TRIGGER MODEL" RIFLES.

The Winchester Repeating Arms Co. make the announcement that about October 1, 1904, they will put on the market two new .22 caliber single shot rifles, which will be known as the "Thumb Trigger Model" and the "Model 1904 Single Shot." The former is a decided novelty. As its name indicates, the trigger, which is located on the upper side of the grip at the rear of the bolt, is operated by pressing down with the thumb. It is claimed that

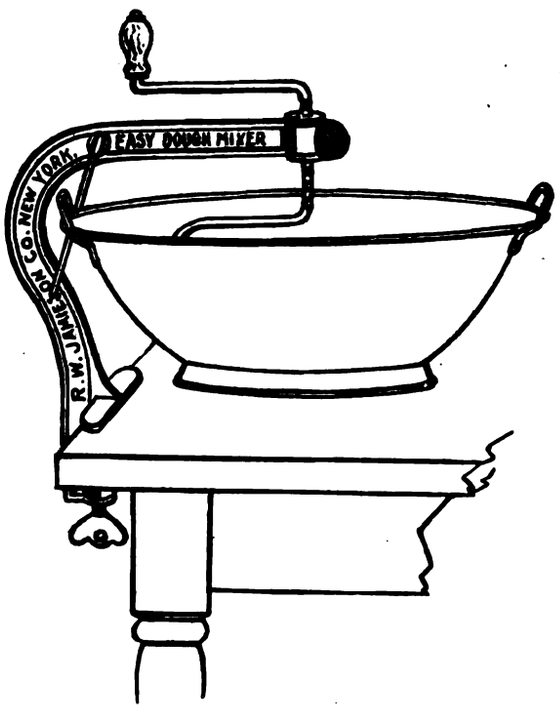


WINCHESTER "THUMB TRIGGER MODEL" RIFLE.

this style of trigger is an aid to accurate shooting, as the shooter is not so apt to throw the gun off the object aimed at in pressing down the trigger as when pulling it in the old way. This rifle weighs about 3 pounds and will list at $3.50. The Model 1904 Single Shot is the biggest value in a gun ever offered. It has a 21-inch heavy round barrel, a handsome highly finished Schuetzen shaped butt-stock 13¼ inches long with a blued steel rifle buttplate. The length of this gun over all is 37½ inches and its weight is about 4 pounds. It will list at only $6. Notwithstanding the low price at which both these rifles are offered, the claim is made that they are made with the same degree of care and science which characterizes the manufacture of all Winchester rifles. Both guns are made in take-down style and have the same simple and reliable bolt action which has made the Winchester Model 1902 so popular and has caused it to be so widely imitated. The Thumb Trigger and 1904 models will be regularly packed for the trade ten guns in a case.

TAYLOR'S IMPROVED GASOLINE HYDROMETER.

Taylor Brothers Co., Rochester, N. Y., and 85 Chambers Street, New York, have recently placed upon the market the Improved Gasoline Hydrometer, of which we give an illustration. The nickeled brass case is 1x6 inches, inside of which is a glass test tube, and inside the latter is the hydrometer in a soft flannel case. When not in use it may be carried safely in a kit of tools of either auto or motor cycle supplies. The principal feature that makes this form of hydrometer valuable, is a thermometer having a correction scale so that the gasoline's true gravity can be obtained without regard to the temperature at the time. Usually hydrometers for gasoline are made assuming that the gasoline will always be tested at a temperature of 60 degrees F., on which the Baume scale, the accepted standard, is based. But in the ordinary temperature fluctuations and climatic changes it often has to be tested in a temperature as low as freezing or less, and again as high as 90 or 100 degrees, which greatly alters the gravity reading. With this instrument the temperature is seen at a glance, and on the same scale a correction table is laid off, showing the number of degrees to add to or subtract from the hydrometer reading at top at the various temperatures above or below 60 degrees F. For example, if the gasoline at test is 80 degrees F., four is substracted from the reading, and if the temperature be 40 degrees F. four is added, all of which is plainly printed on a scale inside the larger tube, although not shown in the engraving. In these days of substitution one should not use 60 degrees gasoline when the machine demands 76 degrees or better. With this little instrument it can be determined instantly the quality of the oil offered by the dealer. For the owner or operator of a launch, auto or any power using gasoline it will prove an acquisition.



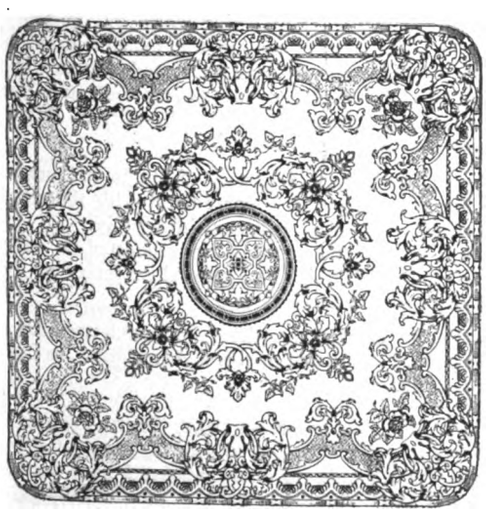
TAYLOR'S GASOLINE HYDROMETER, WITH TEST TUBE AND CORRECTION SCALE.

THE EASY DOUGH MIXER.

The R. W. Jamieson Co., 50 Warren Street, New York, are the manufacturers of the Easy Dough Mixer, illustrated herewith. The machine is entirely simple in its construction, as may be seen by the illustration, and is intended to be marketed at a moderate price. It is easily clamped to table or shelf, and can be used in connection with any of the various size pans used in making bread. It is also useful in mixing cake dough or any similar mixture. In construction it consists of an angular arm support having a clamping member at one of its ends and a verticle ad-

Digitized by Google

justable bearing at the other. The mixing rod is adjustable both vertically and laterally—so to be adapted for use in any diameter or depth of bread-raising pan. Means are provided, at the side of the machine, for engaging the handle to the pan, which pre-



THE EASY DOUGH MIXER.

vents it entirely from turning. The mixing member is made from one piece of metal and is easy to adjust and instantly removable, when it is necessary to clean it after the kneading operation. The process of mixing the bread is simple, it being only necessary to add the liquids, yeast, etc., first, then the flour; turn the crank about three minutes, when the dough will be found to assume a compact, ball-like mass. The mixing member while rotating, picks up the dough and the dough being soft, tends to lag and travel slower than the mixing member which draws through it, kneading it into an even grain and moulding it into a compact mass, the hands never coming in contact with the dough. The machine is instantly removable from the table and the dough is free to raise in the pan in which it has been mixed.

COOPER & McKEE'S STOVE BOARDS.

Cooper & McKee, 113-121 Lorimer Street, Brooklyn, N. Y., are the leading manufacturers of Stove Boards within the limits of Greater New York, making as they do fifteen regular lines, running in individual sizes from 24 to 36 inches. The "Zinc" boards

"CRYSTAL" STOVE BOARD.

are handsomely embossed with a silver finish. The "Embossed" boards are made of embossed white metal with a bright and durable finish. The "Crystal" boards are elegantly decorated with handsome designs. All of the boards enumerated above are paper lined, and round, square or oblong in shape, and packed one dozen in a case. We present an illustration of one of the most popular styles, "The Crystal." The wood-lined Embossed are embossed in a bright silver finish, and are of corrugated edge without patched corners. The wood-lined "Crystal," which is a very attractive and durable board, is heavily coated with transparent varnish, which prevents oxydizing and keeps them lustrous in stock. These two lines are made square and oblong in shape, and are packed half dozen in a case. The assortment of styles will fill every requirement. Further particulars may be obtained from their catalogue, which is sent upon request.

VICTOR BOTTLE STOPPER AND OPENER.

The Taplin Manufacturing Co., New Britain, Conn., with New York office at 155 Chambers Street, are the manufacturers of the

VICTOR BOTTLE STOPPER AND OPENER.

Victor Bottle Stopper and Opener, of which we give an illustration. The upper part is used for opening capped bottles. The

COUNTER DISPLAY STAND.

stopper, when put in the neck of a bottle, will effectually stop it. The tool is a very simple and yet effective one. For counter display purposes, a dozen stoppers are mounted on a card and put in a box 9½x11 inches. It is a little novelty that has selling merit.

SOMETHING NEW IN EXPANSION BOLTS.

The New Jersey Foundry & Machine Co., of 9 Murray Street, New York, have just issued a four-page circular descriptive of their new one-part diamond expansion shield. For years the impression has been that expansion bolts were only intended for use in masonry, but it is stated by the manufacturers that the diamond one-part expanion shield will hold equally well in wood and will not work loose. For fastening down chairs and desks in school rooms, stools in stores, opera chairs, locks on doors of passenger coaches, etc., where constant use tends to loosen the screws, the advantages of this shield are at once apparent. With this shield it is only necessary to bore a hole with an ordinary bit, insert the shield and run in the screw the same as in wood. The shield is made with four prongs, which insures a uniform grip in all directions. The diamond one-part expansion shield is made in standard sizes from ⅛ inch to 5-16 inch diameter, to fit wood screws from No. 5 to No. 18 inclusive. Any kind, make or length of wood screw can be used. The New Jersey Foundry & Machine Co., who manufacture these shields, carry all sizes of the one-part shield in stock, and also of the diamond two-part expansion shield up to 2 inches diameter.

THE JOINT CONFERENCE ON THE CATALOGUE HOUSE QUESTION OF ASSOCIATED JOBBERS AND RETAILERS.

The Catalogue House Committee of the National Hardware Association, consisting of S. Norvell, St. Louis, Mo., chairman; R. A. Kirk, St. Paul, Minn.; W. S. Wright, Omaha, Neb.; S. A. Bigelow, Boston, president, and T. James Fernley, Philadelphia, secretary-treasurer; of the Southern Hardware Jobbers' Association, R. M. Dudley, Nashville, Tenn., chairman; and the National Retail Hardware Association, W. P. Bogardus, Mt. Vernon, Ohio, chairman; M. L. Corey, Argus, Ind., secretary; E. M. Bush, Evansville, Ind.; S. R. Miles, Mason City, Iowa, and T. Frank Ireland, Belding, Mich., held their sessions at Hotel Jefferson, St. Louis, Monday, Tuesday, Wednesday and Thursday, June 27, 28, 29 and 30.

We are advised that the many phases of this important and interesting question were thoroughly discussed from the viewpoint of the manufacturers, the jobbers, the retailers and the catalogue house. It was the aim of this conference to eliminate all irrelevant matter and get right down to the main principles and issues involved. Little time was wasted complaining of existing conditions. The questions that were discussed and decided upon were those bearing upon practical and equitable remedies to be applied. After earnest and thoughtful consideration of each point involved, a platform was adopted for the future guidance of those who will be in charge of this work for the jobbing and retail interests of the country.

It will be obvious to all that some of the very objects this conference had in view would be made more difficult of accomplishment by the publication of all the articles in the platform, but realizing the general interest of the trade in this subject, we are informed that the following is a brief summary of some of these articles.

The present established system of distributing goods from the manufacturer to the jobber, from the jobber to the retailer and from the retailer to the consumer is the most economical and best serves the interest of all classes of our people and therefore must be maintained. The manufacturer, the jobber and the retailer are entitled to a fair and reasonable profit, and any system of merchandising that injures either manufacturer, jobber or retailer should be recognized as an injury to all.

The present conditions that exist as a result of the methods of the catalogue houses in marketing certain well-known manufacturers' brands have greatly injured the jobbing and retail Hardware trade of this country, and if such methods are to be encouraged it means the eventual elimination of the Hardware jobber and retailer. The catalogue house system of making prices is recognized as being such that a few catalogue houses doing an infinitesimal part of the total Hardware business of the country can make prices for the retail Hardware trade of the whole country, regardless of consequences.

It is recognized that the great injury the catalogue houses are to the trade is not the result of their actual sales but of their general demoralization of prices in the Hardware line in order to influence sentiment and sales on other goods on which they make inordinate profits. It is recognized that neither manufacturer, jobber nor retailer can stand alone. It is believed there is a community of interests. It is the duty of the manufacturer to protect the jobber. It is the duty of the jobber to protect the retailer.

The Hardware trade of this country cheerfully accept the control of many manufacturers in the sale of their goods, the object of such control being to prevent the demoralization of prices on such lines, and it is maintained that the same principles should be applied to catalogue houses for the protection of the retail trade. It is not demanded that anyone refuse to sell catalogue houses, but it is emphasized that if any manufacturers or others insist upon selling this class of trade it is their duty to the jobbers and the retailers to see that the interests of the jobbers and retailers selling such goods are protected. Attention is called to the fact that the only method by which jobbers and retailers can show a practical and substantial appreciation of the good will of those manufacturers who are willing to exert themselves in the protection of the interests of the retail dealers, is by pushing the sale of their goods.

With the desire of placing in the hands of the jobbers and retailers a simple and ready reference of lines of goods and prices shown in the catalogues of prominent catalogue houses, it is proposed to compile a digest of the prices published in the Hardware line by the best-known catalogue houses, together with the names of the brands. In cases where the descriptions of the goods offered for sale are purposely misleading, the correct names, numbers and other description of the goods will be given. It is recommended that the buyers of both jobbers and retailers refer to this digest whenever placing their orders for the lines therein mentioned.

It is believed that this digest will concentrate the attention of all intelligent buyers of both jobbers and retailers upon such goods as catalogue houses are permitted to use as baits and leaders and that as a result of such concentration of attention manufacturers will find they will lose more profit on the large percentage of their sales made through jobbers and retailers than they can possibly gain by not controlling the prices of the catalogue houses.

As a number of manufacturers whose lines of goods appear in current catalogues have given their assurance that either their lines will not be in future catalogues or that there will be a radical change in many of the prices quoted in such catalogues, it has been decided, in justice and fairness to such manufacturers, that this digest will cover only catalogues issued after this date.

It was the sense of the conference that by-gones would be by-gones; that no manufacturer, jobber or retailer should be criticized for his action in connection with catalogue houses in the past. It was recognized that jobbers' and retailers' associations have been working on this question for a number of years. There was no desire to emphasize any credit that might be due them for their part of the work.

It was thought best that this work be carried on by associations and through association membership. All jobbers and retailers not now connected with associations will be welcome to join the Association ranks and assist in continuing this work.

An important action by the conference was the formation of a permanent organization for the continuance of this catalogue house work, under the name of

THE WHOLESALE AND RETAIL HARDWARE JOINT COMMITTEE,

All members of the three committees taking part in this conference became members of this permanent joint committee, which was organized by the election of

S. Norvell, St. Louis, Mo.,
Chairman.
T. James, Fernley, Philadelphia, Pa.,
General Secretary.
M. L. Corey, Argos, Ind.,
Secretary for the retail Hardware trade.

and an executive committee of six, composed of the gentlemen mentioned above, and also

W. P. Bogardus, Mt. Vernon, Ohio,
Pres. Nat'l Retail Hdw. Assn.
R. M. Dudley, Nashville, Tenn.,
Southern Hardware Jobbers' Assn.
C. B. Carter, Knoxville, Tenn.,
Secy-Treas. South. Hdw. Jobbers' Assn.

It is emphasized that this Joint Committee does not represent jobbers or retailers alone, but is a committee representing the united interests, in one committee, of both jobbers and retailers. It is believed that this is the first committee of the kind that has ever existed in the Hardware trade of this country. This fact is a marked indication of the prevailing belief that in this catalogue house question the interests of both jobber and retailer are identical.

We are further advised that active work will immediately be commenced in various ways among the jobbers in the associations, through their buyers and salesmen, and also that important measures will be gotten under way among the retail Hardware trade of the country through the National and State Retail Hardware Dealers' Associations.

M. L. Corey, Argos, Ind., Secretary of the Joint Committee for the retail Hardware trade, will correspond with the retail trade on any questions they wish to raise on this subject.

The manufacturers and jobbers are requested to address T. James Fernley, Philadelphia, Pa., general secretary of the Joint Committee in regard to this question.

Previous to the Conference, the following letter was sent to the members of the Southern Jobbers' Association by Col. R. M. Dudley, asking for suggestions:

NASHVILLE, TENN., June 20, 1904.

To the Members of the Southern Hardware Jobbers' Association.

Gentlemen—As you are, no doubt, aware, I have been selected to serve on a Joint Committee, representing the Southern Hardware Jobbers' Association, to look after the Catalogue House question. This is a Joint Committee composed of

One member from the Southern Hardware Jobbers' Association.
Three members from the National Hdw. Jobbers' Association.
One member from the American Hardware Mfgrs.' Association.
Two members from the National Retail Hdw. Dealers' Assn.

This committee will meet in St. Louis on the 27th inst. at the Hotel Jefferson, and will, of course, consider this question very fully. I realize the responsibility of the position in which I have been placed, and I would like very much to have some sugges-

Digitized by Google

tions from the members of the Southern Hardware Jobbers' Association as to what line of policy this committee should pursue.

I dislike to be a member of a committee who does nothing, at the same time it is my desire always to be conservative. I assure you that any suggestions from you will be appreciated, and if you wish it, kept confidential. The Southern Hardware Jobbers should not treat too lightly this question of Catalogue House Competition. While none of us have sold these people and have not suffered much from their competition, the inroads which they are making with us are greater than ever before, and this is undoubtedly the time when we should direct our efforts against them.

I would be very glad to hear from you promptly with any advice that you would be kind enough to give me.

Yours truly,

R. M. DUDLEY,
of Gray-Dudley Hardware Co.

P. S.—Please acknowledge receipt of this letter at once—addressing the same as follows: R. M. DUDLEY, Representing the Southern Hardware Jobbers' Association, c|o Hotel Jefferson, St. Louis, Mo.

OMITTED CONVENTION RESOLUTIONS.

The following resolutions were adopted at the recent convention of the Southern Hardware Jobbers held at Atlanta, but through some error, failed to be included in the press reports. They will be read by our readers with additional interest:

RESOLUTIONS.

Whereas, We have heard with pleasure and profit the splendid addresses of S. Norvell and others relative to the subject of catalogue houses and the evils arising therefrom, and

Whereas, This matter has not attained the proportions in our Southern territory that it has in some others, yet, appreciating that matters of such far-reaching influence which affect one portion of the trade should appeal to the craft as a whole; and in addition thereto that these matters may sooner than we think be upon us for vigorous action; and in order that we may carry out the idea and spirit of co-operation and federation which render our efforts more effective in obtaining our wishes from those we desire to impress, now, therefore,

BE IT RESOLVED, That we appoint R. M. Dudley, of Nashville, Tenn., as the representative from this Association to act in concert with the representatives of other organizations hereafter to be appointed and that he be instructed to act in behalf of this Association in conjunction with the others in the contemplated meeting.

RESOLVED, That our thanks are due and are hereby tendered to W. P. Bogardus, President of the Retail Dealers' Association of the United States for his intelligence and timely address before our Association.

Second, that we hail with pleasure this evidence of growing good will and fellowship as evidenced by this address, and we desire to reciprocate the good will as expressed by Mr. Bogardus, and we trust that the bonds which unite us may grow stronger year by year.

NEW ENGLAND IRON AND HARDWARE ASSOCIATION.

The annual meeting of the New England Iron and Hardware Association was held at Young's Hotel, Boston, Tuesday evening, June 21st, President Harry W. Waite in the chair. After the customary dinner had been attended to, the business of the evening was taken up, which was primarily the reception of reports of officers and committees for the previous year, and the election of officers for the coming year. The reports of John T. Boyd, clerk, and of Treasurer Charles H. Breck were read, and the chairmen of the following committees made their annual reports: Membership, Heavy Hardware, General Hardware, Woodenware, Saddlery Hardware and Finance. Treasurer Breck then read a report of the operations of the Bureau of Credit, which embraces a law and collection department that has been found very useful to the members in collecting overdue accounts. All of the reports were accepted and placed on file. The affairs of the association are reported in a very prosperous condition, and it is constantly increasing its influence. The membership is increasing and the general work of the association becoming more efficient. The American Iron & Steel Mfg. Company were elected to membership. The following Board of Directors was elected: C. F. Bragg, George B. Dexter, Charles H. Breck, John T. Boyd, Oscar A. Shephard, William P. Hill, William Chamberlain, Albert C. Ashton, Harry L. Doten, Roswell M. Boutwell. The directors elected C. F. Bragg, Bangor, Me., president; George B. Dexter, Boston, vice-president; Charles H. Breck, Boston, treasurer; John T. Boyd, of Yale & Towne Mfg. Company, Boston, clerk. Retiring President Waite introduced the new president with a few graceful words and welcome, and relinquished the chair to his successor, who responded in a brief address. C. F. Bragg, the newly elected president of the association, is a member of the Heavy Hardware firm of N. H. Bragg & Sons, Bangor, Maine, and in addition to his local prominence in mercantile affairs, has also served the city of his residence two terms as mayor, and is now occupying other positions of honor in that community. His election was a complete surprise to him and was received by the members with every evidence of approval, he being regarded as exceptionally well qualified for that or any other position.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED JUNE 21, 1904.

365,060. CLOTHES-RACK. Thomas H. Eulass, Mason City, Ill.
365,086. POCKET-KNIFE. George W. Miller, Meriden, Conn.
365,130. OIL-CAN. William W. Hills, Cadilac, Mich.
365,157. SIPHON OIL-CAN. Charles N. Tyler, Buffalo, N. Y.
365,160. LOCK-HINGE. Joseph Wolf. Hoboken, N. J.
365,167. MOP-WRINGER. John F. Chase, Augusta, Me.
365,186. VISE. James Kenyon, Jonathan Barnes and Richard W. Kenyon, Accrington, County of Lancaster, England.
365,255. TACK-HAMMER. Louis H. Hoover, St. Louis, Mo.

PATENTS ISSUED JUNE 22, 1904.

763,155. SAW-SET. Emma Claywood Peoria, Ill.
763,191. HOSE-MENDER. Jesse B. Marvin, Frankfort, Ind.
763,220. UNIVERSAL FRICTIONAL HINGE. Francis E. Totten, Newark, N. J.
763,226. VISE OR THE LIKE. Frederick E. Walden, Worcester, Mass.
763,257. SAW-HANDLE. Charles W. Byham, Kane, Pa.

PATENTS EXPIRED JUNE 28, 1904.

365,383. LOCK FOR CONCEALED-HAMMER GUNS. John M. Holladay, Holladay, Va.
365,420. PICTURE HANGING DEVICE. Charles M. Barnes and Warren S. Hill, Boston, Mass.
365,434. WEATHER STRIP. Albert E. Duncan, Lyons, Iowa.
365,457. DINNER-PAIL. Amasa M. Bartlett and John L. Toughy, East Marshfield, Mass.
365,467. VEGETABLE SLICER. John D. Freese, Chicago, Ill.
365,491. GRAVITATING DOOR CHECK AND CLOSER. Henry P. Shaw, Boston, Mass.
365,534. HASP-LOCK. Frank W. Mix, New Britain, Conn.
365,536. DOOR-CHECK. Francis V. Phillips, Chicago, Ill.
365,602. FISHING REEL. Henry C. A. Kasschau, New York, N.Y. N. Y.

PATENTS ISSUED JUNE 28, 1904.

763,383. ARTIFICIAL MARBLE. David Feldhamer and Nathan Oelgiesser, New York, N. Y.
763,393. DOOR-HANGER. Charles E. Harrington, Chicago, Ill.
763,437. DINNER-PAIL. Herbert Sobey, Republic, Mich.
763,448. PICTURE HANGER. Carl Winter, Chicago, Ill.
763,449. EAVES TROUGH HANGER. Cecil S. Wolford, Coshocton, Ohio.
763,469. GRINDSTONE FIXTURE. Thomas P. Eillis, Ripley, Tenn.
763,474. SASH CORD GUIDE. William R. Fox, Grand Rapids, Mich.
763,485. CARPET FASTENER. William Hausler, Derby, Conn.
763,627. HANDLE. Joseph M. Parmenter and George C. Kohler, Sidney, O.

CHINESE LABORERS IN AFRICA.

The mine owners of South Africa are entering into contracts with Chinese laborers to work in the mines of that country, says United States Consul-General Ragsdale, Tientsin, China. Ships are already at Hongkong to convey these laborers to the field of operations. The contracts are guaranteed by the British authorities, and are for three years. The coolies are to be transported free of all charge, with a reasonable supply of baggage, and are to be housed, fed, and have medical attendance, and in case of death their remains are to be sent to China. They are to have a daily ration of 2½ pounds of native grain, rice, or flour, 6 ounces of fresh or preserved meat or fish, half an ounce of tea, groundnut oil, and salt. They are to be furnished with supplies—clothing, tobacco, etc.—at cost price. At the end of the time they are to be returned free of cost. For the day's work (ten hours) they are to receive 25s. ($6) per month, and are not compelled to work on Sundays or the four Chinese holidays. After they become experienced they may work by the task, on a piecework scale to be arranged. In case of permanent injury, $12 is to be paid; in case of death not the result of negligence, $50 is to be paid to the representatives of the deceased. The sum of $30 is paid each coolie prior to his departure, to provide an outfit and make provisions for his family, etc.

Digitized by Google

THIRD ANNUAL CONVENTION OF THE NATIONAL CYCLE TRADE ASS'N

The third annual meeting of the National Cycle Trade Association was held in New York City, June 22d, 23d and 24th, 1904. At the meeting of the active members, held June 22d, the minutes of the meeting held at Niagara Falls in 1903 were read by the secretary and approved as read.

W. D. Andrews, of Syracuse, N. Y., was elected an active member, and Louis Schwab, of Newark, N. J., an associate member.

The following directors, whose term of office expired, were re-elected for three years:

Eugene Arnstein .....Chicago, Ill.
C. L. Kelsey.....The Kelsey Co., Buffalo, N. Y.
W. L. Beckley.....The Beckley-Ralston Co., Chicago, Ill.
A. J. Holmes.....Farwell, Ozmun, Kirk & Co., St. Paul, Minn.

The remaining eight directors held over, their names being as follows:

C. W. Leng.....J. S. Leng's Son & Co., New York City.
E. J. Lloyd.....Bindley Hardware Co., Pittsburgh, Pa.
Wm. V. Sauter.....Edw. K. Tryon, Jr. & Co., Philadelphia, Pa.
F. I. Willis.....H. T. Hearsey Vehicle Co., Indianapolis, Ind.
Geo. T. Robie.....Excelsior Supply Co., Chicago, Ill.
Wm. F. Harrah....Harrah & Stewart Mfg. Co., Des Moines, Ia.
Wm. Spalding.....The Spalding Co., Syracuse, N. Y.
C. W. Cole.....The McIntosh Hdw. Cor., Cleveland, Ohio.

The following vice-presidents were elected for the ensuing year:

Geo. T. Robie, first vice-president, Chicago, Ill.
Brace Hayden, second vice-president, San Francisco, Cal.
Chas. H. Turner, third vice-president, Albany, N. Y.
C. J. Schmelzer, fourth vice-president, Kansas City, Mo.

The Executive Committee for 1904-5 is as follows:

Eugene Arnstein.....Chicago, Ill.
W. L. Beckley.....The Beckley-Ralston Co., Chicago, Ill..
Chas. H. Turner.....Albany Hdw. & Iron Co., Albany, N. Y.
Wm. F. Harrah....Harrah & Stewart Mfg. Co., Des Moines, Ia.
Brace Hayden....Dunham, Carrigan & Hayden Co., San Francisco, Cal.
A. J. Holmes....Farwell, Ozmun, Kirk & Co., St. Paul, Minn.
C. L. Kelsey.....The Kelsey Co., Buffalo, N. Y.
Chas. W. Leng.....J. S. Leng's Son & Co., New York City.
E. J. Lloyd.....Bindley Hardware Co., Pittsburgh, Pa.
W. H. Coles.....McIntosh Hdw. Cor., Cleveland, Ohio.
Geo. T. Robie.....Excelsior Supply Co., Chicago, Ill.
Wm. Sauter.....Edw. K. Tryon, Jr. & Co., Philadelpiha, Pa.
C. J. Schmelzer.....J. F. Schmelzer & Sons Arms Co., Kansas City, Mo.
Wm. Spalding.....Spalding & Co., Syracuse, N. Y.
F. I. Willis.....H. T. Hearsey Vehicle Co., Indianapolis, Ind.

The treasurer's report was read and approved. Several members were reported as not having paid their dues. The treasurer was instructed to take specific action in each case reported.

The Grievance Committee is as follows:

C. W. Leng.....John S. Leng's Son & Co., New York City.
Geo. C. Strauss.....Jos. Strauss & Son, Buffalo, N .Y.
E. J. Lloyd.....Bindley Hardware Co., Pittsburgh, Pa.
Gordon Beckley.....The Beckley-Ralston Co., Chicago, Ill.
A. J. Holmes.....Farweli, Ozmun, Kirk & Co., St. Paul, Minn.
Brace Hayden.....Dunham, Carrigan, Hayden Co., San Francisco, Cal.
E. T. Weiant.....Consolidated Supply Co., Denver, Col.
J. F. Richards..Richards & Conover Hdw. Co., Kansas City, Mo.
C. L. Elyea.....Alexander-Elyea Co., Atlanta, Ga.

At a meeting of the board of directors held June 23d in the office of the Association, Irving Building, Chambers Street, West Broadway, President Leng stated that as he had served the Association as president for two years, he thought he should be relieved. Vacating the chair, he nominated C. L. Kelsey, of Buffalo, for president. Thereupon Mr. Kelsey was chosen president for the ensuing year, and A. M. Scheffey, was re-elected secretary-treasurer.

President Kelsey announced the appointment of the following Classification Committee:

H. E. Raymond.....B. F. Goodrich Co.
Wm. B. Miller.....Diamond Rubber Co.
H. O. Smith.....G. & J. Tire Co.
Col. Geo. Pope.....Pope Mfg. Co.
Harris Parker.....Eagle Bicycle Co.
J. R. B. Ransom.....Consolidated Mfg. Co.
W. A. Graham.....New Departure Mfg. Co
W. J. Surre.....Corbin Screw Corporation.
Ralph D. Webster.....Eclipse Machine Co.
Geo. T. Robie.....Excelsior Supply Co.
Brace Hayden.....Dunham, Carrigan, Hayden Co.
W. F. Harrah.....Harrah & Stewart Mfg. Co.
A. J. Holmes.....Farwell, Ozmun, Kirk & Co.
Geo. Collister.....Collister & Sayles.
C. L. Elyea.....Alexander-Elyea Co.
Chas. W. Leng (Temporary Chairman) J. S. Leng's Son & Co.
Chas. L. Kelsey.....The Kelsey Co., Pres. N. C. T. A.
A. M. Scheffey.....Secretary-Treasurer, N. C. T. A.

A joint meeting of the jobbers and manufacturers was held at the Cosmopolitan Hotel at 3 o'clock P. M., June 22d, 1904. C. L. Leng presided and A. M. Scheffey acted as secretary. There was a large attendance. President Leng delivered the opening address, in which he thanked the members of the Executive Committee, the manufacturers and members generally for their support during the past season. He spoke of the various Association features and urged the formation of a joint Classification Committee.

Other addresses were delivered by Chas. Z. Tryon, of Philadelphia, on the "Artificial in Business;" by T. James Fernley, secretary National Hardware Association, on the general working plan of that Association, and by F. C. Gilbert, of the Pope Mfg. Co., on "Popularizing the Bicycle."

D. J. Post moved that the thanks of the visitors be tendered to the Entertainment Committee for the excellent programme furnished them. The following resolutions were adopted:

Resolved, In that it is impossible for the jobbing trade to conduct its business without granting a Spring dating on cycle goods to its customers, that a request be made on the rubber manufacturers that they, in preparing their arrangements for the coming season, provide for a dating not exceeding April 1, 1905, to be granted to the jobbing trade.

Resolved, That it is the sense of this meeting that jobbers' prices should be extended to jobbers only.

Resolved, That a Classification Committee of 18, composed of three bicycle manufacturers, three coaster brake manufacturers, three tire manufacturers, seven jobbers and the President and Secretary-Treasurer of the N. C. T. A. be appointed by the President to formulate a list of those entitled to jobbers' prices; ten votes being necessary to place any name on the list.

Resolved, That it is the sense of this meeting that catalogues, price-lists, or other advertising matter reaching the rider should not quote net trade prices.

Brief addresses were made by Ralph D. Webster, W. J. Surre, G. W. Cole and W. P. Crary.

At a second joint meeting of manufacturers and jobbers held in the Association office at 1 o'clock P. M., June 24th, a special committee, consisting of C. L. Elyea, S. B. Roby and C. W. Leng, submitted a report in which appeared the following words:

"It was, however, unanimously resolved that whereas all of our members present desire the sale of certain standard articles under restricted contract prices, that manufacturers be requested to continue the system of restricted contract prices that has been in use during the present season. The committee further report that there was not a dissenting vote within the Association on this subject. The members of this Association do not ask for the Detroit plan or for any other particular plan, but simply for the continuance of a system of restricted contract prices on standard goods which have heretofore been sold under contract prices, and such other standard lines as the manufacturers thereof may desire to include.

"The committee desire to express the thanks of the members of the Association to the manufacturers for the support received during the last season, and earnestly desire their co-operation during the ensuing year."

A meeting of the Executive Committee was held on board the excursion boat *St. John*, at 4 o'clock P. M., June 24, 1904, at which it was agreed that the dues for the ensuing year should be $25 for active and associate members, said dues being payable July 1, 1904. in advance.

At the office of the Association, 12.30 P. M., June 23, 1904, a meeting of jobbers of bicycles and bicycle sundries (members of the Association and others) was held at which a general discussion of the price question was participated in by E. J. Willis, A. Wilson, A. Morris, James Fintze, C. L. Elyea, C. L. Kelsey and Geo. W. Nock.

Digitized by Google

On motion of Mr. Wilson, it was resolved to be the sense of the meeting that jobbers prices should be given by manufacturers to jobbers only, and that the resolution to the same effect passed at the joint session of Manufacturers and Jobbers, held June 22, be unanimously approved.

The entertainment provided for the visitors was very much enjoyed. On the afternoon of June 23d, all partook of a dinner at Cafe Martin, Broadway and 26th Street, and in the evening the party witnessed the play of "The Yankee Consul" at the Broadway Theatre. On Friday afternoon, the 24th, the visitors were taken on the excursion boat *St. John* down the bay and thence to Coney Island, where all participated in the delights of Dreamland and Luna Park. Ever since the meeting, the committee, consisting of W. A. Graham, A. Seiple and F. E. Castle have been showered with thanks for the good time had.

Among those present at the various meetings were:

Jesse Froehlich.....Pennsylvania Rubber Co., New York City.
Harry Lee....Bridgeport Gun Implement Co., New York City.
A. Seipel.....Bridgeport Gun Implement Co., New York City.
Harris Parker....Standard Spoke & Nipple Co., Torrington, Ct.
S. B. Keefer....Standard Spoke & Nipple Co., Torrington, Ct.
Carl Kaufman .....Manhattan Storage Co., New York City.
F. A. Wilcox.....Pennsylvania Rubber Co., New York City.
C. A. Hoagland.....John H. Graham Co., New York City.
Thos. J. Wetzel..National Cement & Rubber Mfg. Co., "
Baldwin Chain Mfg. Co.
S. A. Randolph.....The Dismond Rubber Co., Akron, Ohio.
James Fintze.....Hoover-Ball Co., Newark, Ohio.
Chas. F. U. Kelly.....Continental Rubber Works, Erie, Pa.
C. L. Kelsey.....The Kelsey Co., Buffalo, N. Y.
E. J. Lloyd.....Bindley Hardware Co., Pittsburgh, Pa.
Ephraim Lee.....Buffalo Tire & Rubber Co., Buffalo, N. Y.
D. L. Spraker.....Kokomo Rubber Co., Kokomo, Ind.
F. G. Stewart.....B. F. Goodrich Co., New York City.
W. P. Crary.....Twentieth Century Co., New York City.
J. T. Wherett.....New York City.
Wm. H. Grover.....Norfolk, Va.
Geo. C. Strauss.....Jos. Strauss & Son, Buffalo, N. Y.
Lewis J. Keck.....Badger Brass Co., New York City.
E. S. Feetz.....The Light Mfg. & Foundry Co., Pottstown, Pa.
Geo. W. Nock.....Philadelphia, Pa.
R. D. Alliger, Jr..Brandenburg Bros. & Alliger, New York City.
F. H. Russ.....Buffalo, N. Y.
J. B. Tucker.....Sidney, Ohio.
Fred I. Willis....H. T. Hearsey Vehicle Co., Indianapolis, Ind.
W. E. Pitzel.....Progressive Cycle & Auto Co., New York City.
F. E. Castle.....New York City.
F. C. Gilbert.....Pope Mfg. Co., Hartford, Conn.
C. A. Higmore....Manufacturers' Supplies Co., Philadelphia, Pa.
Andrew Wilson.....The Wilson Co., New York City.
Wm. V. Sauter.....Edw. K. Tryon, Jr. & Co., Philadelphia, Pa.
Wm. H. Graham.....John H. Graham & Co., New York City.
P. R. Robinson.....N. Y. Sporting Goods Co., New York City.
W. H. Burgess.....A. G. Spalding & Bro., New York City.
Wm. Spalding.. .....Wm. Spalding & Co., Syracuse, N. Y.
D. J. Post.....The Post & Lester Co., Hartford, Conn.
A. Morris.....Manhattan Storage Co., New York City.
Chas. T. Wilson.....The Wilson Co., New York City.
W. McCallister.....Baltimore, Md.
E. J. Willis.....New York City.
W. J. Surre.....Corbin Screw Corporation, New York City.
C. W. Griswold.....Corbin Screw Corporation, New York City.
F. N. Stevens.....Stevens & Co., New York City.
H. V. Dodge.....John R. Keim, New York City.
Goshen Rubber Works.
H. Mesinger.....H. & F. Mesinger Mfg. Co., New York City.
W. S. Roby.....S. B. Roby & Co., Rochester, N. Y.
C. L. Elyea.....Alexander-Elyea Co., Atlanta, Ga.
D. B. Nally.....Pennsylvania Rubber Co., New York City.
F. W. Walters.....Pennsylvania Rubber Co., New York City.
David H. Cox.....Cox & Spencer, Rahway, N. J.
R. C. Stacey.....P. B. Frasse & Co., New York City.
G. H. Barnes.....Barnes Tool Co., New Haven, Conn.
G. E. Hammanan.....Eagle Bicycle Co., Torrington, Conn.
John N. Wyllis.....Elmira Arms Co., Elmira, N. Y
Geo. W. Cole.....Coles Many-Use Oil Co., New York City.
Wm. F. Remppia.....Reading Standard Mfg. Co., Reading, Pa.
T. James Fernley.....National Hdw. Assn., Philadelphia, Pa.
F. A. Baker.....F. A. Baker & Co., New York City.
R. G. Betts.....*Bicycling World*, New York City.
H. S. White.....Shelby Steel Tube Co., Pittsburgh, Pa.
R. R. Harris.....
P. H. Fryism .....
R. W. Sampson.....
Louis Schwab.....Newark, N. J.
Chas. S. Persons.....Persons Mfg. Co., Worcester, Mass.
Jas. B. Pratt.....John S. Leng's Sons & Co., New York City.
W. S. Gorton.....Standard Welding Co., Cleveland, Ohio.
Ralph D. Webster.....Eclipse Machine Co., Elmira, N. Y.
Charles Z. Tryon.....Edw. K. Tryon, Jr. & Co., Philadelphia, Pa.

C. L. Kelsey, the new president of the Association, began active business in the bicycle sundry line in 1889. He, however, was financially interested in the same four years previously. In 1889 he founded a stock company in Buffalo, N. Y., composed of C. E. Kelsey, E. E. Kelsey, J. Kelsey and himself, known as The Kelsey Co. The capital stock all paid up $25,000. This company purchased the sundry business of M. Strauss, Buffalo. The following year they purchased the sundry business of H. C. Colton and also Buffalo Cycle Conponent Co., and moved the store to the Masonic Temple Building, 43-45 Niagara Street. Their business is exclusively wholesale, amounting to about $250,000 per year, which includes about $100,000 of export business. They manufacture bicycle frames, forks and the well-known Rapid Transit Delivery attachment for bicycles. They employ two to four salesmen and issue annually 25,000 catalogues.

THE AMERICAN COMMERCIAL INVASION.

The last railroad built in India has American rails. Americans export their iron and motors, their machinery, and galvanic wires to South Africa. Egypt, too, has more than one Philadelphia bridge. Three hundred railroad cars from Jersey City have found their way into the land of the Pharaohs, and in the foundries of Pittsburg electrical tramways were forged to connect Cairo with the Pyramids. Is it wonderful that the American manufacturer and exporter should claim, like the American missionary, that he is the great torch-bearer of civilization? For, as we have shown, he is sending the products of his mill and factory into all Europe, and it may be added that his shipments extend to all the world New Guinea, the Caroline Islands, Peru, and Greenland send to him for sewing machines. From all parts of Asia come orders for the handmaiden of commerce, the typewriter, with "export keyboards" in Hebrew, Greek, Armenian, and Arabian characters. That the Asiatic may sweeten his everlasting tea immense quantities of condensed milk are shipped to Manchuria and Mongolia. From Moors and Persians come orders for bicycles, while Abyssinia wants American cameras. The great Atbara bridge, in the Uganda, in Africa, was built of American steel by American engineers. A tool-shop in Sandusky, Ohio, recently filled an order from China for 20,000 planes. Far Australia calls for 20,000 tons of steel from an Illinois plant. Java has just bought a whole ship-load of wire fencing. Japan absorbs everything American, from lamps to a complete railroad. Jerusalem orders Edison talking machines and Kentucky whiskey and Pennsylvania stogies. To the shores of the River Jordan itself the American manufacturer is now sending his agricultural machinery.—GILSON WILLETS in *Leslie's Weekly*.

DENMARK'S FOREIGN TRADE IN 1903.

Denmark's foreign trade in 1903 is computed at $119,900,000 for her imports, and at $95,000,000 for her exports. The latter consist chiefly of meat and dairy products—lard and animal fat, 14,000,000 pounds; butter, 197,860,000 pounds; ham and bacon, 174,810,000 pounds; beef, 25,510,000 pounds; divers meats and sausages, 17,550,000 pounds. Besides these, Denmark shipped abroad in said year, 477,200,000 eggs, 21,494 head of horses and colts, 62,929 head of cattle, 39,650,000 pounds of fresh fish, and 15,050,000 pounds of salted herrings. The principal items of Denmark's imports are: Dry goods, yarns, thread, cordage, minerals and products thereof, iron and manufactures thereof, fertilizers, wood and wooden ware, oil cake, linseed, clover, and grass seed, grain (rye, wheat, barley, oats and corn), wheaten flour, and groceries. If well attended to by American producers, Denmark may prove a more valuable market to them than many of the countries of Central and South America. Neither should be neglected. Both are worth working for.—RICHARD GUENTHER, *Consul-General*, Frankfort, Germany, May 16, 1904.

AN IMPOSING ARRAY OF NOTEWORTHY PERFORMANCES.

At the recent National meet of champion marksmen, known as "The Bundesfest," held at Union Hill, N. J. (June 12th to 20th), there were more victories recorded by Stevens Target Rifles than all other makes combined. "The old, old story" is chronicled when we point to the many notable Stevens' successes scored at this important gathering. Sixty-three per cent of total winnings of first ten men were won by Stevens' rifles. Forty men made scores of 65 to 72 on target of honor, of which 28 used Stevens' rifles. "Top Notch" scores were made by: Theodore R. Geisel, of Springfield, Mass., who obtained first place on the Standard American target. His score was 49; rifle used, a Stevens' Pope, 32-40-200. In the King contest, he recorded a 10-shot score of 27 out of a possible 30 on the point target. Won first place on ring target, scoring 74. The winner of first place on the honor target, Louis Brehm, of Pittsburgh, Pa., shot a 30-40 Stevens' Pope rifle. A. Strecker, San Francisco, Cal., obtained second place on target of honor, scoring 70. He was equipped with a 32-40 Pope-Winchester rifle. W. A. Tewes was second in the King contest, making the excellent score of 197. A. 33-40-224 Pope-Ballard rifle helped him win the coveted place. Louis P. Ittel secured third place in the King Match, shooting a Stevens-Pope rifle—32-40-200. This imposing array of noteworthy performances are additional links to the long, unbroken chain of Stevens' champion achievements.

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

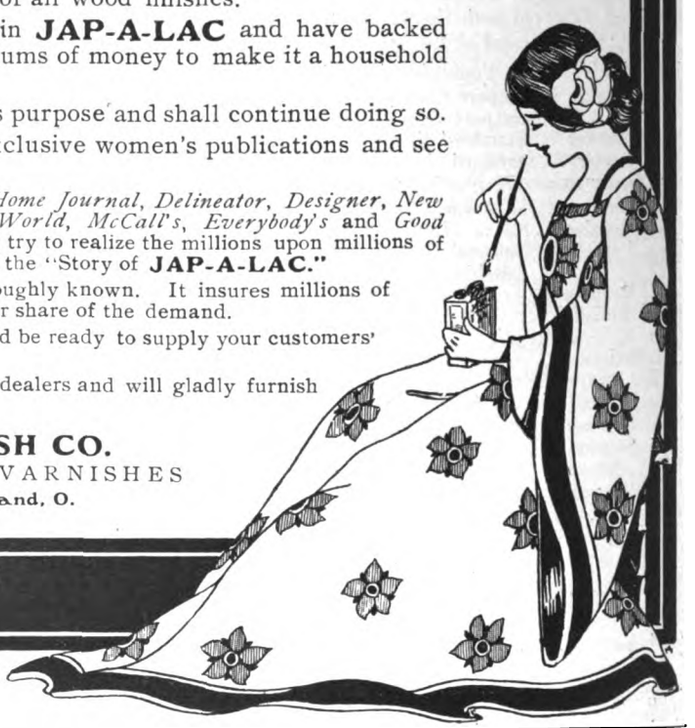
We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.



Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

THE WEIGHT OF MONEY.

"The weight of money is very deceptive," said an employee of the Treasury. "For instance, a young man came in here one day with a young woman. I was showing them through the department and happened to ask him if he thought the young woman was worth her weight in gold. He assured me that he certainly did think so, and after learning that her weight was 106 pounds we figured that she would be worth in gold $28,647. The young man was fond enough of her to think that was rather cheap.

"Another thing that deceives many people," he continued, "is the weight of paper money. Now, how many one dollar bills do you think it would take to weigh as much as one five-dollar gold piece?"

On a guess the visitor said fifty, and the clerk laughed.

"I have heard guesses on that," he said, "all the way from 50 to 500 and from men who have handled money for years. The fact of the matter is that with a five-dollar gold piece on the scale you would only have to put six and one-half dollar bills on the other scale to balance it.

"The question was afterward put to several people and elicited answers all the way from 20 to 1,000, the majority guessing from 300 to 500.

"Taking the weight of gold coins and bills given at the Treasury, it was figured that a five-dollar gold piece weighs .296 of an ounce avoirdupois. The employee at the Treasury who handled the paper money said that 100 bills weigh four and one-half ounces. That would make one bill weigh .45 of an ounce, and between six and seven bills would balance the gold piece.

"On the proposition of how much money one can lift, figures were obtained at the Treasury. Where certain number of coins were placed in bags and weighed as standards, for example, the standard amount of gold coin is $5,000, which weighs 18½ pounds. Five hundred silver dollars weigh 35½ pounds, while $200 in halves, or 400 coins, weigh eleven pounds.

"Two hundred pounds of coin money of various kinds is made up as follows: Silver dollars, $2,617; half dollars, $3,636; quarter dollars, $3,657; dimes, $3,615.80; nickels, $817; pennies, $295.61.

"In one dollar bills the same weight would amount to $71,111."
—*Washington Star.*

HOW THERMOMETER TUBES ARE MADE.

Few people looking at the fragile little thermometer tubes think or know how anything of the process by which they are made, and yet there are few places more interesting than a glass factory. When the raw material is brought to the factory, it goes into clay pots within the crucible and remains there thirty hours at least. When it has become a molten mass, it is ready for use. A long blowpipe is thrust into the vivid pool of glass, twirled a moment and then withdrawn, bearing at its end a small glowing ball. This ball is rolled to a cone on a small slab of iron. Then it is handed to a man seated in a low wooden chair having long The contact with water makes them very rough, and often, in arms. He gives a little puff through the pipe, rolls the pipe on the arms of the chair and then it is ready for the master workmen. The blowing requires great skill and the long slender tubes stretch out between the two workers in an incredibly short time. A touch of cold iron severs the glass from the blowpipe and the finished tubes are taken to the annealing oven, where they pass by graduation from the intense heat to comparative coolness.—*Popular Mechanics.*

ORIGIN OF THE BUCKBOARD.

There are few persons who know how the name of "buckboard" came to be applied to a vehicle. It was 'way back in the '20s, when the transportation of goods, wares and merchandise was almost entirely by wagon. A Dr. Buck, who for many years afterward was the military storekeeper at Washington, was then in charge of military stores *en route* to army posts in the Southwest. In East Tennessee much difficulty was experienced by reason of the rough roads, and there were frequent mishaps, mostly from the wagons overturning. Dr. Buck overhauled the outfit, and abandoning the wagon bodies, long boards were set directly on the axles, or hung below; and the stores were loaded in such a manner that there were no further delays from breakdowns, and the stores safely reached their destinations. In special emergency, too, the load could be shifted or taken off in a hurry. The idea was probably not new, but Dr. Buck's example was followed, done by the use of wheels, axles and boards only. Now we have especially when roads were rough, and soon much hauling was the buckboard, both in carriage and automobile forms, conforming closely to the original idea, though few suspect the source of it.—*The Carriage Dealers' Journal.*

REVIEW OF THE MARKETS.

WIRE NAILS.—With the market by no means an active one, stocks are accumulating to some extent, but this condition will last till the mills shut down for midsummer regulating of plants. No change of note is made on the "less than carload lot" quantities, which form the bulk of the sales. Quotations continue as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in ten days:

Jobbers, carload lots	$1.90
Retailers, carload lots	1.95
Retailers, less than carload lots	2.05

New York.—Business fair to medium for the month; demand up to expectations, with prices without change in the local market. Quotations are as follows:

Single carloads	$2.10
Small lots from store	2.20

CUT NAILS.—The Cut Nail Association had their usual monthly meeting on the 29th ult., but no change in quotations was deemed advisable, although more or less competition is occasionally heard from. Quotations were reaffirmed for July, and remain as follows on either Steel or Iron Nails, with no discrimination as to locality:

Jobbers' carload lots	$1.75 base
Jobbers' less than carload lots	1.80
Retailers, less than carload lots	1.90

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.

New York—Stocks are claimed to be in good normal conditions and orders are filled promptly with no large specifications in sight. Demand is fairly up to the season's requirements. Quotations are as follows:

Carloads on dock	$1.89½
Less than carloads on dock	1.97½
Small lots from store	2.05

BARB WIRE.—Scarcely any new business is received that will prevent the mills taking the annual vacation for clearing up and repairs. General quotations remain as previously quoted, as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.20	$2.50
Retailers, carload lots	2.25	2.55
Retailers, less than carload lots	2.35	2.65

SMOOTH FENCE WIRE.—Demand is quite light as far as new orders are concerned and only an ordinary business is being done, inventory and repairs being next in order. Regular quotations are as follows, f.o.b. Pittsburgh, terms, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.80
Retailers, carloads	1.85
Less than carloads	1.95

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

AGRICULTURAL WRENCHES.—Competition between leading makers forced prices on these goods down too low; an agreement resulting therefrom has made quotations for Fall trade from ten to twenty per cent. higher than the lowest quotations that have been made.

CORDAGE.—While the demand is but an ordinary one, about what is expected for the month, with but little activity to encourage it, prices are unchanged from our previous report. The following quotations represent the market:

	Cents per lb.
Pure Manila, 7-16-inch and larger	11½
⅜ inch	12
¼ inch and 5-16	12½
No. 2 Manila	10¼@10½
Pure Sisal, 7-16-inch and larger	9
No. 2 Sisal, 7-16 inch and larger	8
⅜ inch	8½
¼ inch and 5-16 inch	9
Lath, Yarn, Medium and Coarse	8
Jute Rope, No. 1	6½
No. 2	6

BINDER TWINE.—Eastern quotations for carload lots, as follows, represent the market, f.o.b. Eastern factories:

	Cents per Pound.
White Sisal (500 feet to the pound)	9¾@10
Standard (500 feet to the pound)	9¾@10
Standard Manila (550 feet to the pound)	10¾@11
Manila (600 feet to the pound)	11¾@12
Pure Manila (650 feet to the pound)	12¾@13

Less than carload lots, quarter of a cent extra.

LINSEED OIL.—Under date of July 6, the following advanced quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels. .....43 cents per gallon.
In lots of 5 barrels or more.. .....42 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE CLEVELAND TRADE.

The generosity of employers in paying laborers when they are absent, causes dissatisfaction, because all employers do not find it possible to grant such gratuity. There is no legal or ethical reason why a contract for labor should not be complied with by both parties. That wealthy, prosperous concerns give such gratuities is not a good reason for assuming that all labor contracts carry such obligations. All employers are not in condition for such generosity without impairing their ability to pay their debts, and to be just before generous is commendable. If such gratuity was received with gratitude it would tend to increase the practice, but when claimed as a right tends to suppress it. It speaks well for the generosity of employers that it has become so common as to create the expectation of its universality, but it is depressing to those who are not in condition to grant it. It sometimes happens that an employer is in most need of gratuity. The ambition to be thought liberal to employees is universal, and the effect of being compelled to deny the expected gratuity is unpleasant. There is nobility in the giving, but none in expecting a gratuity. It tends to the degradation of the individuality that makes Anglo-Saxons superior. A man who labors should not be a dependent, he should be as useful to his employer in doing his work, as his employer is to him in paying agreed wages, preserving the manliness of both. Expecting tips is incompatible with American manhood, and should not be encouraged. Trade is surprisingly good, if account is taken of what would naturally depress it. The immense losses have not seriously affected financial interests. There has been no panic. The government has paid fifty million dollars in gold on the Panama Canal scheme without depleting the Treasury, and has more gold left than any other nation. Altogether the outlook is optimistic, and the West is happy.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CINCINNATI TRADE.

The month of July opened with the usual amount of bustle preparatory to the "National Holiday," the day of the "small boy" and the complementary amount of accidents necessary thereto. Aside from an unusual amount of fireworks, the sporting goods houses also disposed of a very much larger number of various kinds of revolvers, fishing tackle and canoes than for many years in anticipation of the Glorious Fourth. The absence of the general volume of noise on the Cincinnati streets this Fourth, and the fact that most of the purchases in firearms were made in connection with boats and fishing tackle, would indicate the exodus of the old-time Fourth of the cities to the forests and streams and pleasure resorts "Fourth" of the present day. I think this is largely due to the fact that no firearms "which includes cap pistols and canes" can be sold to minors, persons so charged being immediately arrested. Verily "the day of the small boy is past." The 35th weekly special sale of the Pickering Hardware Co. embraces bathing trunks, screen door pulls, etc., and hair clippers. These special sales are proving a profitable business puller. Mr. Hart, representing the Commercial Electric Company of New Orleans, La., who was seen on the "Fourth" said: "As we have no 'Fourth' in the South, using Christmas for our celebrating, I came to Cincinnati to buy $400,000 worth of machinery from the Bullock Company, which with other equipments, is to be

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN., U. S. A.
Improved Carpenters' Tools.
SOLD BY ALL HARDWARE DEALERS.

shipped to New Orleans for a million-dollar plant in that city." Mr. Hart claims that by the next census New Orleans will have a population of 500,000 people as against 350,000 now, as she is prosperous in cane, cotton and rice and on the boom. The John Shillito Company has declared its semi-annual dividend of 3½ per cent. on its common stock, payable August 10th.

THE BIRMINGHAM TRADE.

The rains have decended in bountiful showers, relieving the oppressive heat and making life more agreeable and cheering us by giving us good reason to hope for large crops, which are the basis for good business. The labor troubles are coming to an end by some of the operators reaching a working basis with the miners. This year the operators have no association and are acting independently and it is hoped that ere long all will be at work. The railroads continue to seek an entrance into our city. By the end of this year the Seaboard Air Line are expected to have trains in operation here. The Illinois Central have recently arranged with the 'Frisco system to come in over their tracks and thus we secure two more independent lines. We are glad to see them come, thus making our city an important centre of distribution. All this tends to establish confidence in our own citizens and the outside world giving a stimulus to real estate and to the building of business houses and residences. The Hardwareman and the supply dealer thus gets something to do. While we are not rushed with orders, we are hopeful and contented with what business we are getting and have good grounds to expect better things to come. It is generally admitted that a Presidential year is an off year for trade. We cannot, however, see that any one is wasting time discussing the future or are very anxious about the unsettled results on that account, and hence we think a better explanation is needed so far as our section is concerned. We see in the work of building the Panama Canal an opportunity for increased trade and enhanced importance of our Southern ports; and in consequence, a beneficial result to our entire country, for one section of our country cannot prosper or suffer without all become partakers of the good or sharers in the evil. When we can all learn this lesson well, it will tend to make us more tolerant and less disposed to criticise the evils which are supposed to result from geography. We notice in the trade reports a quiet condition all over the country. We feel that our section is one of the most favored. The South is an important part of the whole and this truth is fast dawning upon the doubtful.

MOORE & HANDLEY HARDWARE CO.

THE PITTSBURGH TRADE.

The continued wet and cool weather throughout the Spring months is reflected in the volume of sales for the first half of the year which shows a falling off when compared with last year. The situation in the iron and steel market is characterized as "hopeful" but furnaces continue to go out of blast. The coal business is very quiet and many mines are shut down, activity being confined almost wholly to the lake trade. General business in this section depends for its main support upon the manufacturing industries and under these conditions a dull Summer seems to be a safe prediction As a general proposition, however, the outlook seems favorable. Aside from the fact that the mills and factories have few orders for immediate delivery there is nothing to worry about. The feeling is general that the large buyers in these lines will be compelled before long to make heavy purchases and that the Fall will bring an active demand. Once started, there is no reason why this activity should not continue. The retrenchment policy of the Penna Railroad is being severely felt in some sections. A wholesale reduction in wages affecting over 30,000 men and shut downs, which leave some 5,000 or 6,000 men idle, cannot fail to have a noticeable effect on business in these sections. The Merchants and Manufacturers' Association of Pittsburgh have arranged for their first trade excursion during the coming week. A special train will convey representatives of the principal business houses of this city over a route covering a number of the larger towns in the West Virginia territory, which is more directly tributary to Pittsburgh. Considerable interest is manifested in this excursion, both by the wholesalers in this city and by the trade in West Virginia, and it is expected that it will prove very successful in bringing them into closer relations. Following this the Association expects to arrange for in-bound excursions, by taking advantage of which merchants can come to Pittsburgh, for the purpose of buying goods, at a greatly reduced rate of fare. LOGAN-GREGG HARDWARE CO.

THE ST. PAUL TRADE.

With the election of Roosevelt a certainty, and with crop prospects most excellent, we have much to be thankful for; though our crop is not assured until sold and the money in the pockets of the farmers, then we feel safe, for the farmer buys some Hardware all the time, and more when his pockets are well lined. The steadiness of the market is pleasant to all. We see no reason for great disturbance, and expect none. We feel that our section will be blessed with more than an average crop and advise our trade to keep their stock full for the trade will soon be such that they will lose sale, if not well stocked. All the agitation about catalogue houses and department stores which seems to disturb so many is wrong, inasmuch that it simply advertises them and makes people believe that they sell goods cheaper than any one else, while the fact is that both of this class of dealers can get more on an average for their goods than the regular dealer. They have the plan of misleading people down to a nicety and they succeed successfully in doing so. The regular dealer can compete with any one of them if he will. His average profit would increase, not diminish, if he could get their prices on all items. The retail Hardwareman must study their ways and fight them wherever he sees they are weak.

HACKETT, WALTHER, GATES HARDWARE CO.

THE MINNEAPOLIS TRADE.

We are all waiting for the crops, although we are still doing business at the old stand and fairly satisfactory business, too. We need warm, but not too hot, dry growing weather. With these conditions everything would be most favorable. Fall business will depend somewhat on that, more than the results of the election, although there are not many that seriously question the result. Now that lake navigation is open goods are coming in that we have been suffering for for weeks and many of them will have to be carried over. Prices seem to be fairly well maintained, with the exception of nails, and they are somewhat demoralized. We think the jobbers in all lines are doing more business than they were sixty days ago, the retailers about the same. There has on the whole been very light business for the past six months of this year as compared with the past two years, but not light as compared with the last five years or so.

W. K. MORISON & CO.

THE SAN FRANCISCO TRADE.

The city and coast trade expression indicates that we may now be getting the edge of the wave of dullness which has been slowly rolling westward across the continent, or that the present quietude may be merely the usual midsummer lull, for thousands of people are now out of town on their Summer vacations; but the tendency is to report business decidedly quieter, without, however, any disturbing elements or any disposition to croak; that we are naturally affected by conditions in other parts of the country, although our position as a source of supply for the great markets of the Orient, which have been drawing on us for various lines of produce and merchandise for a number of years, operates to keep us from experiencing the more pronounced forms of business depression; but that so long as we have the South Pacific, northern coast and Oriental markets relying on us for goods we can never experience the acute conditions which occur in the East at regular intervals. Though dull trade we may have for a time, it is never entirely without some degree of activity. As is usual Saturdays, all jobbers closed business at noon to-day, July 2d, and, unusually so, numbers of Hardware retailers did

NICHOLSON FILE COMPANY
GENERAL OFFICES: PROVIDENCE, R. I., U. S. A.

MANUFACTURERS OF
FILES AND RASPS
NICHOLSON, KEARNEY & FOOT. ARCADE, AMERICAN. GREAT WESTERN, MCCLELLAN. EAGLE, J. B. SMITH. "X. F.", GOLD MEDAL.

likewise in order to give themselves and their help an opportunity to enjoy the Fourth of July vacation in the country for two-and-a-half days. In the case of members of the Pacific Coast Hardware and Metal Association they are off to-day for what they are pleased to call a full week's outing, their rallying point being the choice garden spot, Santa Barbara, where they will hold their annual meeting July 6th, 7th and 8th.

Since Mr. Plummer's recently reported retirement from the Hardware company of Philpott & Plummer, the trade name has been changed to C. H. Philpott & Co., and under the new organization and re-incorporation Mr. Philpott has been re-elected president and manager and H. C. Houghton secretary-treasurer. Mr. Houghton is an old-time Hardware merchant, but during the last couple years of his interregnum has been doing the general trade good service as secretary and missionary for the San Francisco Retail Hardware Association. This association service is now in the hands of Johnson Reynolds, who has established his office in the Philpott store, Mr. Philpott being also president of the Hardware association. The store has been materially enlarged, the former main floor offices provided with balcony so that the general appearance is quite tasteful.

Over the bay at Petaluma a change occurred the past week. C. Tempel, a pioneer Hardware merchant of that city, disposed of his business to Messrs. McCracken and Crockett, recently from Ohio. Mr. Temple has been in the trade for the past forty years.

And on the east shore of the bay, in the city of Berkeley, the Driggs-Butterfield Company filed articles of incorporation to conduct there a Hardware store. The company has a capital stock of $25,000, the directors being E. H. Driggs, F. L. Butterfield, C. A. Driggs, R. P. Butterfield and C. W. Dickson.

James A. Morrow, president of the Pacific Metal Works in San Francisco, but an east side resident of Oakland, has been elected trustee of the Oakland Free Library Association. Mr. Morrow is an alumnus of the University of California, having graduated with the class of 1879, of which George C. Pardee, now Governor of the State, was a member, and who is now on the way with other distinguished gentlemen to inform President Roosevelt that he was nominated at the recent National Republican convention for another Presidential term.

INDUSTRIAL PRESS ASSOCIATION.

A SECOND-HAND HARDWARE FAIR.

The street fairs are a distinct feature of Parisian life. Hallowed by custom and governed by strict police regulations, they come round as regularly as the saints' days. The sound of a bell on the morning of a recent Sunday opened the *Fete des Jambons*, literally "festival of hams." But the less in this case included the greater, for the Hardware and metal *fete*, which is held at the same time and in the same place, exceeds the ham fair both in extent and in variety. On the Boulevard Richard-Lenoir, in a mile and a half of street stalls, Jacques Bonhomme and his wife from every department were disposing of the produce of the pig in gay booths, covered with strings of huge sausages done in silver foil. One of these booths bore high on the pediment the bust of a horse. The relation between the horse and the sausages was left to be inferred. The only viands disposed of, besides the sausages and hame aforesaid, were rabbits—live rabbits. They were gambled for. If you put a penny on one of thirty-six squares and the index of the revolving wheel pointed to that particular square, the rabbit was yours. Thirty-six pence for each rabbit was the average yield to the vendor—not a bad price. But the hardware section claimed more of my attention than the other. I never would have thought that so much rubbish could be accumulated in France. Anything, from a second-hand tooth-brush to a mortising machine, could be bought. Brassware predominated. In the mass of resurrected lamps, candlesticks, fire-stands, warming-pans, and ornaments many valuable things could doubtless be found if one had the patience to ferret them out. Two qualifications were necessary for a successful quest—disregard for personal comfort, and a gift for haggling. There was a third—money. At this *fete* a Frenchman invariably offers half the price demanded for any object he may covet, for a stranger a safe rule is to offer one quarter. It was surprising to find the number of heavy and bulky articles brought for sale—machine tools, for instance. New goods were shown on a very few stalls. Nearly all were second-hand. What are termed "curiosites" were displayed in force. The liking of the Frenchman, even of the humbler class, for the artistic—genuine or bastard—in his house decoration is strong, and influences trade not a little. I saw a man give 15 francs for a rather choice pair of brass candlesticks, who seemed, to the outward eye, to be more in need of shoes. Anyone to whom the *fete* phase of French life appeals, especially anyone engaged in the hardware trade, should not fail if he is in Paris at the time to attend the function I have described. Should he descend upon it in the afternoon he will find all the world there, and he must walk with caution if he would not have his toes mangled.

A NEW LINING FOR REFRIGERATOR CARS.

A new lining ("Artic" brand of Keystone Hair Insulator), especially for refrigerator car insulation, has recently been placed on the market. Its distinctive characteristic is, that, while it possesses the insulating properties of hair felt, it combines the papers used in connection therewith, so that instead of involving three operations, the Arctic can be applied in one. It consists of regular felting hair fastened to and enclosed by two layers of waterproof paper. Tests have demonstrated it to be equal to Hair Felt and superior to anything else. It is furnished in lengths sufficient to reach around a car and wide enough to extend from the sill to the roof-plate. This does away with joints. Car builders will appreciate this saving in labor and waste. For the floors and roofs, the Arctic is furnished according to specifications, to fit the nailing strips and carlines respectively. It is made from ⅜-inch to ¾-inch thick, according to the quantity of hair employed, and should meet with ready favor. H. W. Johns-Manville Co., 100 William Street, New York, are prepared to figure upon specifications and furnish samples, data of tests, etc., promptly upon request.

A VALUABLE HANGER OF CONCRETE INFORMATION.

The American Sheet and Tin Plate Company, Frick Building, Pittsburgh, Pa., are distributing to the trade a little show card hanger on which they have assembled *facsimiles* of the trademarks of some of the principal products of the company. This is really a valuable compendium of important information relating to these universally used brands, showing as it does in a single glance the degree of quality that is given to each of these grades now so prominent on the market. It should be requested by our readers at once.

A Skin Game.

"Do you shave yourself very close?" said the barber.

"Not very," said the victim. "I usually leave enough skin to fasten the court plaster on, but of course you didn't know that before you began."—*Cincinnati Times-Star.*

HARDWARE FACTS AND FICTION NOT GENERALLY KNOWN

WRITTEN FOR HARDWARE.

Fourth Article.

TRADE TOKENS.

Seventeenth century traders were in fairly prosperous condition and there were many ironmongers who stood out conspicuously among their fellow traders. The scarcity of small change was severely felt throughout England during the latter part of the 17th century, and ironmongers in common with other traders issued farthing and halfpenny tokens in order to supply it. These pieces were small, and the value of the copper of which they were composed of trifling value, hence a considerable profit was made. The dies used were of steel, the presses being made of oak, and the screws were wrought by hand. The study and the collection of these pieces reveals the fact that many of the traders were also craftsmen, and also that several industries then in a flourishing condition are now extinct.

Among the trades allied to Hardware were farriers, founders, fletchers, (makers of arrows), girdlers, (makers of grid irons and girdle plates), needle and pin makers, pewterers, gunners, locksmiths and trunk makers. The arms of the Ironmongers' Company, three swivels between three gads, figured frequently on the reverse of ironmongers' 17th century tokens. The three hammers of the Blacksmiths' Arms and the sword in saltire of the Cutlers', as well as the gauntlet between two pairs of swords of the Armorers, were often seen. Implements of trade, such as axes, hammers, picks, shears, ploughs, harrows, scythes, frying pans and gridirons were represented as emblematical of the Hardware trade.

Traders' tokens were first issued in 1648 and ceased in 1672 when regal coinage of copper currency took place. Some notable ironmongery bringing to mind contemporary history may be recalled. Hugh Holton, an ironmonger of Bedford, struck a token in 1666. He was the friend of John Bunyan and aided the gifted author of *Pilgrim's Progress* during his imprisonment.

Signs of the ironmongers of this period were curious. Samuel Hincks, of Whitechapel, had a sign of "Ye old bag of nails," and placed it on his halfpennies; the sturdy Richard Voare, of Kingstone-on-Thames, preferred a square piece of metal to the ordinary circular coin, and on the reverse of his halfpennies the Ironmongers' Arms were surmounted with the legend "Square dealing 1668."

There are few central spots in the world so well known as the Mansion House in the city of London, yet in 1669 when Hugh Lombard struck his tokens the "Wollchurch markett" where he had his shop occupied the spot where the official residence of the Lord Mayor of London now stands.

In addition to traders' tokens some of the principal towns of Great Britain struck coins for the "convenience of trade" and in order that the "poor might have change." Few of these town pieces were identified with any particular trade, but Stourbridge, (then spelt Stower Bridge) was an exception, and on the obverse of the coins of this town the Ironmongers' Arms were displayed, on the reverse the Arms of the Clothworkers, thus indicating the two staple trades of the district. Strange to say, the whole of the traders' tokens of that locality were issued by Hardwaremen.

It was after the 17th century that retailers of Hardware were distinctly separated from workers in iron. The blacksmiths were gradually divided from whitesmiths, locksmiths and other craftsmen, and retail traders gradually assumed a distinct location among workers in metals. Towns are growing and even villages were assuming a distinct trading character. Artificers and workmen gradually divided from retailers, and became separate crafts, and organized their own guilds for their protection. Retail Hardwaremen, although continuing for many years to manufacture a considerable number of the goods they sold, began to purchase ready-made articles from Birmingham, and other centres of Hardware manufacture. The country smiths generally took up shoeing and other work in connection with estates, which, as civilization extended, required more work and afforded a greater scope for operatives. Thus, although the village ironmonger continued to sell numerous articles made in his own locality he went farther afield and opened up regular accounts with traders who soon afterwards became known as factors, and formed the foundation of the great trade of Birmingham and Sheffield factors, which for the greater part of the 18th century and the early years of the 19th supplied country traders with nearly the whole of their Hardware goods.

There are many interesting legends connected with iron, and metal enters largely into the folk lore of country districts. The romance of the forge long occupied a prominent place in rural England. The greater portion of the beautiful wrought iron work now preserved with such great care in museums and country mansions was made during the closing years of the 17th century by the village smithy in different parts of England. Time was of comparatively little object, and many of these smiths loved their craft and laboriously performed wonders in the construction of heavy and light wrought iron work; much of their work was of a decorative and ornamental character, and entered largely into the ornamental structures of the period. One of the most popular poems ever written was *The Village Blacksmith*, by Longfellow:

"Under the spreading chestnut tree
The village smithy stands,
The smith, a mighty man is he,
With large and sinewy hands,
And the muscles of his brawny arms
Are strong as iron bands."

Although so many examples of wrought iron work date from this period there are earlier specimens still extant. The door in St. George's Chapel, Windsor, is of the 12th century, and the grotesque knocker on the Sanctuary door of Durham Cathedral, which bears a rather distinct resemblance to a lion, is said to be also of the 12th century.

In order to protect life and property the village blacksmith was often called into requisition, and the country locksmith taxed his ingenuity in order to protect the family chest or coffer. The strength and durability of iron led to its use for offensive purposes from early times, and towards the close of the Middle Ages the smith broke away from conventional ugliness and contrived to breathe the spirit of beauty into his designs without sacrificing the use to which the material was destined. Thus wrought iron formed the object of much artistic work both in England and abroad. Until coal came into general use malleable iron was produced direct from the ore with charcoal fuel by continuous working. Volume II of "The Antiquary" gives an interesting article on artistic iron work. It states: "Our city churches are rich in iron work, such as sword rests, communion rails, and railing round important tombs; many old cathedrals contain beautiful wrought iron brackets with pulleys and chains for the purpose of raising the front cover, and many examples of wrought iron grilles are still preserved in parish churches."

The locksmith was a man of considerable importance in old times, and to judge from the locks, bolts and keys which have been preserved, he ranks high in the artistic scale. His keys are real masterpieces of iron work, and one can readily understand why collectors of the present day make them a special object of search.

SPORTING GOODS TRADE NOTES.

San Jose, Cal.—Osen & Hunt have been succeeded by Geo. H. Osen & Co., who will move to 23-28 St. John Street.

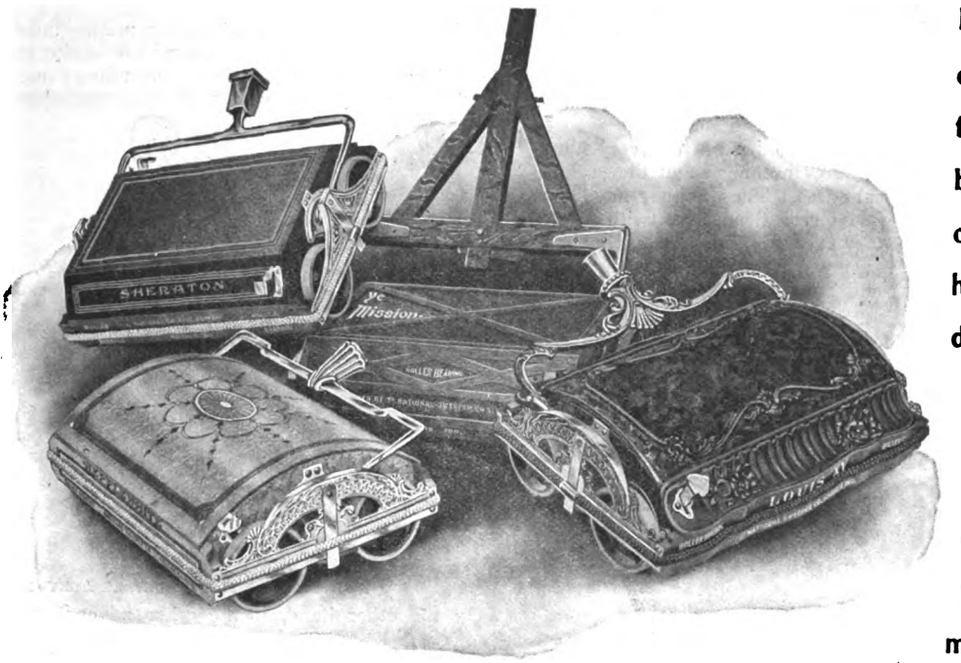
South Bend, Ind.—Collmer Brothers are now in their new factory, which they erected exclusively for the manufacture of cycle and automobile parts.

Springfield, Mass.—Springfield Automobile Co. have increased capital from $10,000 to $50,000.

Toronto, Can.—Samuel May & Co., the bowling alley and billiard table manufacturers, have established a branch house in Winnipeg, Manitoba.

Utica, N. Y.—Remington Motor Vehicle Co. have dissolved. The plant has been purchased by the Black Diamond Automobile Co.

Utica, N. Y.—The Black Diamond Auto Co., a corporation capitalized at $500,000, has absorbed the Buckmobile Co., and the Potter Wheel Works.



Miscellaneous.

Albany, N. Y.— Charles H. Turner, of this city, has been elected a vice-president of the National Cycle Trade Association, at the meeting held in New York on June 24.

Atlanta, Ga.—Gus Castle, dealer, has secured the contract for the machines upon which the bicycle policemen of his city are to be mounted this year. The bicycle squad will ride Eagles, as that machine was picked by George E. Johnson, of the Police Commission.

MANUFACTURERS' TRADE NOTES.

Miscellaneous.

Kalamazoo, Mich.—An addition of three large buildings will be made this Summer to the plant of the Kalamazoo Stove Company. The factory force will be increased to more than double its present size to meet the demand for the goods of this prospering institution. The warehouse will cover a great space, 300x200 feet. It will be one story in height and will be used exclusively for warehouse purposes. The molding shop will occupy an area of 280x120 feet, will be two stories in height, and will be given up wholly to work of molding. The nickel plating and polishing shop will be 100x120, and will partially be put to warehouse use. The big warehouse will have direct access to the L. S. & M. S., C. K. & S. and G. R. & I. railroads and will have shipping facilities not excelled by any manufacturing plant in the city. The work on these new structures will begin at once and all three of them probably will be completed by September 1. All are to be constructed of cement, like the present plant.

Wichita, Kan.—George W. Earp, of North Main Street, has purchased the controlling interest in the "Crescent Wire-Tightener Manufacturing Company," now located in Chicago, and will soon discontinue the business in that city and establish the factory in Wichita. Owing to the rapid growth of the business and the demand for the article, the factory which will be established in this city will be on a much larger scale than the one now in Chicago, and it is the company's intention to manufacture only for the jobbers and wholesale Hardware dealers, instead of the retail dealers as heretofore.

Worcester, Mass.—The Eddy Manufacturing Co., of this place, incorporated under Maine laws, with a capital stock of $50,000, has recently absorbed the business of B. Shales & Co., manufacturers of razors. Mr. Shales has taken an interest in the Eddy Manufacturing Co., and will remain as superintendent of the razor department. The headquarters of the Eddy Manufacturing Co. are at 136 Southbridge Street, while the business of B. Shales & Co. has always been conducted at 42 Southbridge Street. The places will both be run, as in the past, the only change in that direction being that the offices for both branches will be at 136 Southbridge Street.

Newark, N. J.—The Atha Tool Company will put up a $10,000 structure to be used as a power plant and to be erected at Albert Avenue and the Manufacturers' Railroad crossing.

Hannibal, Mo.—The stockholders of the Duffy-Trowbridge Stove Manufacturing Company have elected these directors for the ensuing year: C. H. Trowbridge, C. A. Trowbridge, Morris Cochran, G. W. Dulaney and W. F. Chamberlain.

Salesman Wanted.

TRAVELER ON COMMISSION, visiting the Hardware wholesale and retail trade in the U. S., wanted by Manufacturers of Razors. W. Evertz & Soehne, Graefrath-Solingen (Germany).

For Rent.

FRONT PART of first loft 147 Chambers st., near Broadway, 22½x40 ft.; plenty of light; very desirable locality; especially suitable for Hardware office and sample room. Apply in the store.

PRACTICAL HINTS ON ADVERTISING.

BY CHARLES AUSTIN BATES.

The average business man who tries to write his own advertising matter makes the mistake of thinking that it is necessary to know all about any given business before trying to advertise it. Why this should be so, I cannot understand. When you advertise, you simply say in print the things you would say verbally if prospective customers were in your place of business.

You certainly must realize that ninety-nine out of every hundred people who buy your goods know nothing about the technicalities of your business and care less. They neither have the time nor the inclination to familiarize themselves with trade terms. What they want is *plain, everyday common sense,* logical reasons why your goods are worth buying, why they are better than the other fellows', and how much they cost.

WHAT THEY WANT IS PLAIN EVERY-DAY COMMON SENSE.

If you say that you are selling, strong, durable well-made shoes, your ad. will be understood, and people will know just what your shoes are. If, on the other hand, you say that you are selling hand welted shoes, made on a straight last, with kid vamps, nine people out of every ten won't know what you are driving at. It's surprising how few people really know the difference between a straight last and a crooked last.

A whole lot of embryo ad. writers have told me, for example, that they could not write drug ads. because they never had been in the drug business and didn't know what to say. By the same token, I ought not to attempt to write advertisements for anything but the book business, the printing business, or for a department store, because when I started in the advertising business, my experience had previously been confined to those lines of endeavor. Still, think I may say without egotism, that I have been fairly successful in writing advertising literature for about every business under the sun.

Now, isn't it nonsensical for any man to say he can't write a good drug or a good shoe ad. because he has never been in either the drug or the shoe business? The thing to do is to take yourself over in a corner and sit down and look at your shoes, and think, and think hard. Then take a piece of paper and a pencil and write down all the good features of those shoes that are apparent to you. If there are objectionable features, write those down, and in your ad. say that the shoes you are selling do not have those objectionable features. That's the way to write every kind of advertising matter.

You must get close to the ground if you hope to produce publicity that will sell goods. The most successful advertising man, precisely like the most successful man in any other line of business, is the one who has the greatest amount of plain, horse sense. ✤

The introduction to an ad. doesn't amount to a row of sticks if the rest of the ad. doesn't tell something. The headline of an ad. is the shout which attracts attention. The introduction is simply a graceful way of leading a man up to the descriptive matter and getting him so interested that, instead of shying, he will go on and see what you have to offer and how much it costs. An introduction to an ad. is precisely like the more or less felicitous remarks of the chairman of any cimmittee when he introduces a public speaker. The chairman gets up and says a few facetious things that are sometimes humorous, and that at other times are simply believed to be humorous. After he has exhausted all of his wit, he turns to the speaker of the evening, announces him, and then, with a deprecatory bow, as if to say, "Now, do your worst," retires and leaves the speaker at the mercy of the audience. The introduction to the ad. is built along the same lines. An introduction alone would never sell a bag of peanuts, but it usually adds strength to the descriptive matter. If you are going to cut out anything cut out the introduction. Never forge the descriptive matter and the prices.

The effectiveness of display depends largely upon contrast. If the other advertisers in your paper are using heavy type and heavy rule borders, you should use light faced type, generously leaded, and no borders. Have your matter indented, or set in, on all sides, so as to leave a margin of white space all around. This will make your ad. the most prominent one in the paper—and display means prominence.

AND THEN WITH A DEPRECATORY BOW.

On the other hand, if the other advertisers are using plain type, closely set, and either light borders or none at all you should use heavy borders and heavy type. It is hard to follow a general rule like this, for after all its successful application lies mainly with the printer. Tell him to display your ads. as differently as possible from the others in the paper, and see that he does it intelligently and effectively.

Some of the most important advertising you are doing is the kind that gives you the least concern.

People are very apt to judge you by the signs in front of your store, your window display, your errand boys, your stationery, your packages, your delivery-wagons, in fact, everything they see that represents you in any way.

The sign over your door may attract or it may repel. Next time you come down to business ask yourself if that sort of a sign would attract you if you saw it over another place—or it may not convey the idea that you are as prosperous as you actually are.

ITS SUCCESSFUL APPLICATION LIES MAINLY WITH THE PRINTER.

Your errand boys would do a lot of free advertising for you if you dressed them up in neat blue, brown or gray uniform suits with brass buttons and gold braid, and your firm name on the top in gold lettering. People will stop in the street to look at a boy gotten up in this way. They will think yours is a first class firm that does things in bang-up styles and is evidently doing a big business—and people like to deal with the firm that does the biggest business. ✤

Perhaps your delivery wagons could be kept a lot cleaner—perhaps they need a new coat of paint—perhaps the lettering on them is not as tasteful as it might be. People notice all these things. A delivery wagon is circulating around the streets all day long and many people who pass it will glance at the name and take in the general appearance of the wagon.

If your wagon is much better looking than the ordinary kind, people are going to remember your name and think of you as a top-notcher. Your wagon is either advertising you or de-advertising you, and, if it is the latter, you can easily afford to spend a few dollars to make it what it ought to be. All these nice new signs and uniforms and repaintings cost money, but it is money that is sure to come back. You can't spend too much in building up a reputation as the leading house in your line.

The Way They Fight

A Prairie Fire

is the way to Fight Retail Mail Order House Competition

The lone farmer out on the plains who sees a prairie fire speeding down upon him wastes no time in complaints nor in formulating resolutions about an impending danger.

HE ACTS. Of course he avails himself of every offer of help but it is on action—by himself, for himself, that he relies to save himself.

Immediately he starts another fire near his home, keeping the smaller ones always under his control. And when the big blaze arrives, finding no fuel in his neighborhood, it passes on leaving him saved, through his own efforts.

You hardwaremen, who fear retail mail order house competition sweeping down upon you as a trade-consuming fire—take a lesson from the humble prairie farmer.

FIGHT FIRE WITH FIRE

In other words, get from us—who WHOLESALE by catalogue, that with which to fight those who RETAIL by catalogue.

Get our catalogue. From the merchandise pages, pick the things your trade sends away for. You'll find you can fix prices that fairly shout.

Now advertise. That's what the retail mail order house does. And it spends more, in proportion, than you will have to.

Use your show windows, the newspapers, circulars—every worthy means of advertising. Keep it up. Keep at it.

Turn to the pages of our catalogue devoted to helps for retailers. There, for years, we have been suggesting practical ways of dealing with the mail order question and with other problems in retail merchandising.

Choose from the suggestions. Think the plans you choose into shape for your own needs. Think. Then go ahead and DO.

There are only two reasons why any retailer is bothered by mail order house competition.

Either his lines are incomplete or prices too high—or his customers think they are.

In the first event, the dealer must make his lines and prices what they should be. In the second event, he must correct the faults of his advertising.

In either event, to DO SOMETHING is the only cure. And as a preliminary to the doing, nothing could be better than to get our catalogue.

"Our Drummer," as we style our catalogue, is our only salesman. It is a veritable wholesale department store on paper—sent only to merchants, and free for the asking.

To be sure that you get the issue for July, mention CC 507.

BRUSHES AND BROOMS.

(Continued from issue of June 10)

The vegetable world furnishes many materials for brushmaking in the shape of the roots of various plants and the trunks and leaves of several tropical trees, the palm family standing first in this respect and the cactus of the desert plains making a close second. The trunks of some of the varieties of the palm are cut in sections and run through a shredding machine, which the ashes out the fibrous threads, after which they are cleaned and straightened and tied in bundles for shipment. Around the base of the leaves in some South American palms is found a tough brown network of fiber, which is gathered by the natives and baled for export. These palm fibers form the "bass" of commerce, from which the scrubbing brushes of various shapes and sizes are made, and to the making of such are brought various other vegetable fibers, including several tough grasses and the stringy "rice root." The "coir" of commerce, which is used for cordage and for coarse matting and doormats, is also largely used in brushmaking. It is the husk of the cocoanut, and for its preparation are built shredding machines composed of toothed rollers, between which the husks are fed. The method of making these fiber brushes is very much the same as that employed in the bristle work. The backs, or stocks, are cut from poplar wood, which withstands well the action of water, and into the drilled holes the bunches of fiber are cemented or else are doubled and jerked into place with wire, which is later covered with a nailed veneer, since glue would soften up in water. Some factories use machines to do all the work, while others use them for part only, the fiber being delivered by them to the operators who set the tufts in place. As each row is set it is passed under a shearing machine, which trims it evenly, or else the whole is left to be sheared when the brush is finished.

Split bamboo is also used in coarse brushes, as well as the larger reeds, which are employed in making the heavy brush brooms for sweeping the street and car track, and on some of the big horse-drawn sweepers in use by street-cleaning departments. In this connection it may be mentioned that stiff wire has superseded the rattan in making the last-named brushes, and has also taken a useful place in brush making generally. One plant here makes a specialty of heavy wire brushes for the cleaning of boiler flues, since an accumulation of soot and scale would interfere with rapid steam-making and with economical firing. A circular brush is made of stiff steel wire, and this is worked through the flues by means of a long handle, which is jointed in case the space in front of the boiler is limited.

The sections of some of the round brushes are made to expand with a spring, so as to fit any flue, and smaller brushes are made for cleaning steam and hot-water pipes.

Stout wire brushes, with or without handles, are useful about hot castings in foundries and also for cleaning butcher blocks. Brush brooms of flat steel wire are made for heavy sweeping about foundry and smelter floors, and a heavy, steel-toothed, iron-backed brush is furnished for cleaning hot plates or grates in rolling mills. Along with these come, too, the heavy steel track broom for fastening in front of car wheels and the switch broom with a scraper point on the end of the handle, for cleaning mud and snow off curves and switches. Disk-shaped, revolving polishing brushes are made of various wires, from the finest brass and copper to the heaviest steel. Curved wire brushes are made so that two together will close around the stone in filters and clean off the slimy accumulations.

Steel brushes are made in just the opposite way from those made of bristle, for, instead of having a bunch of wire set in place from the front of the stock, the wires are bent into loops and the ends thrust through from the back. A neat little iron-handled brush is also made of stiff wire and forms a convenient scraper for tinners' and plumbers' work, or for use on the household cooking pot. Flat and round wires of different sizes take the place of bristle and fiber in many brushes in common use, including wire hairbrushes and the flexible wire brushes used in currying horses.

For contact with metal-eating acids, brushes of spunglass are made, and other unusual materials are employed, such as the split quills of feathers, finely divided strands of whalebone, horn softened and split, and the silky, hair-like threads of the cactus.

From the brush it is but a step to the broom with its various shapes and sizes and uses, and for which a need was established coeval with the coming of man, who first began to clutter up the earth. Many materials are used in the making of brooms, from wire and split bamboo to various grasses and the more familiar broom corn, the brushy head of which goes to form that useful domestic servant found indispensable by even the poorest household.

The tall, seedy broom corn is planted in rows and tended much as other corn until the bushy head is heavy with the seeds, and then, before they ripen and take the strength from the fibers, the heads are cut off and hauled away to be seeded, which work is performed by toothed machines that comb the seed from the brush without injuring the straw. The brush is then tied in bundles and is ready for the broom maker, whether he be a blind man, who sits in his poor home and fashions by touch alone the useful implement, or the owner of a busy factory, where power-run machines turn out many thousands of brooms in a day.

Here and there about this city are places where the handwrought brooms are made in varying quantity and quality and peddled by their makers about the streets or sold to dealers, while there are left a few busy factories, who have withstood the clean sweep of the broom trust. To one of these comes the bundles of broom handles and the bales of broom corn by the car load and the electric-run machinery makes quick work of uniting the two. Various light woods are used in the handles, among which maple is the most common, although white spruce, birch and bass wood are used in some countries.

The broom brush first has the stem cut off and is sorted into piles according to length and fineness; then bunches of it are laid against a rapidly revolving, toothed drum, which straightens the fibers and removes all seed and trash. Then a handle is set into a machine, the selected brush is spread around it and wired into place in several layers, the outer one being smooth and sightly and with no stems showing, and the broom, which is round and soft, is passed, after a final cleaning, to the sewer, who clamps the brush flat in a vise and in and out through it slips an electric-run needle, carrying a strong, bright-colored thread, which, in three or five rows of tight stitches, shapes the brush into broom form, after which it is trimmed the proper length and has the stem ends of the fiber civered with a neat piece of colored metal, and is ready to be tied in bundles with its fellows and be sent to the drying room. There it stands in a heated atmosphere a short time to expel any mildew-engendering moisture. Whisk brooms are fashioned much the same way and so are the hearth brooms that have taken the place of that old-time hearth tender, the turkey wing.

Sometimes the broom-corn brush is slightly dyed a green-

(Continued from page 40)

ish shade to give the brooms a uniform coloring, but usually the natural tan shades are preferred since they do not fade. Very heavy brush is made up into stable brooms and for use on rough floors in factories and warehouses, and these are sometimes sewed with wire or else are bound about with stiff wire clamps instead.

Thus far the life-stories of the brooms are the same; but at the factory door they begin an individual experience. Fancifully inclined people might spend a lifetime following in imagination the fortunes of these humble domestic drudges, whose ultimate end is inevitably the ash-pile, but who, during their brief existence, enter so intimately into the home life of the people among whom their lot is cast and who, from their vantage point behind the door, or their place beside the hearth, hear many an interesting tale.

STILL ANOTHER "NATIONAL WAY."

We have made in previous issues of HARDWARE some note of the four new carpet sweepers which the National Sweeper Company, Marion, Ind., are exhibiting at the World's Fair, St. Louis. Judging by the favorable comments that are being passed by the most critical judges we are lead to believe their sweepers are all the Company claims for them, most emphatically the best constructed, handsomest designed and finest finished carpet sweepers manufactured. The Louis XV Roller Bearing Sweeper is fashioned strictly after the same name, treasured among the choicest possessions of many homes. The case is made of the rarest fancy woods, tastefully embellished with the most beautiful and dainty hand carvings. Trimmings are of Roman gold and French gray or polished silver, in keeping with the general design. The Hepplewhite Roller Bearing Sweeper is designed after another old-time popular furnishing. The case is made of a choice variety of woods and imported pearls; there are over 200 distinct pieces of inlay in each case. The trimmings are in harmony with the fashion of the case: French gray or lustre silver. The Sheraton Roller Bearing Sweeper, while very handsomely constructed, is designed along more modest lines and appeals to the fancy of those whose tastes demand a simple and refined elegance. All lines of case and trimmings are straight and massive. The case is made of built-up veneers with borders of fancy inlaid woods on top and bevels. Heavy nickel trimmings only. Ye Mission Roller Bearing Sweeper is designed for those whose tastes prefer the style of our forefathers. The name alone is sufficient description of this unique sweeper, as it is strictly modern Mission in every respect. Trimmings old copper. It will pay our readers to write for this Company's World's Fair Offer.

ENTHUSIASM.

Enthusiasm is one of the finest of all human qualities. It puts piquancy into life. It lends zest and brilliancy to all occasions. Without it man is like a smoking fire on a rainy day. He is an aggravation to his friends and a disappointment to himself. He throws out neither light nor heat. But give him a touch of enthusiasm, and immediately he sparkles and burns.

Many a salesman is faithful, patient, persistent; yet his orders are small. He does not advance in his profession. He never scores a brilliant victory. In fact, he is seldom found in a contest of any kind, because he is too slow and dull to arouse opposition. He never meets an occasion that puts him on his mettle. He is just an average man—or even a little below the average. He is ordinary. He fills a place in business, of course, but nothing like the place he might fill if he were set on fire with enthusiasm.

We are all indebted to the enthusiast for the good cheer he imparts. The quality is infectious. No man can have it and keep it to himself. As Lord Lytton says, "Nothing is so contagious as enthusiasm. It is the real allegory of the tale of Orpheus—it moves stones, it charms brutes. Enthusiasm is the genius of sincerity, and truth accomplishes no victories without it." You handle a first-class line of goods. Indeed, you are willing to admit that they are superior to any similar line. They have first-rate talking points. Well, why aren't you enthusiastic over them, then? You have nothing to apologize for; quite the contrary, you have something to be proud of. Go in and win!—*Exchange.*

♣

Jack—I was up at Dayton's house last night. He's got a great collection of pipes, including a rare old water pipe. Ever see it?

Dick—Yes, and it isn't a water pipe.

Jack—No?

Dick—No; I've smoked it. It's a sewer pipe.

♣

Ethel—I offered Chollie a penny for his thoughts.

Edith—Well, I'll never let you do any shopping for me!

Digitized by Google

GERMANY'S CHEMICAL INDUSTRIES.

Germany's chemical industries have in 1903 worked as profitably as in former years. Some of the largest joint stock companies declared from 24 to 26 per cent dividends on their share capital, besides carrying heavy amounts of their earnings to reserves and liberally writing off on their real estate and manufacturing plant. In the manufacture of dyes (the product of coal tar, etc.) the German chemical works have almost a monopoly, supplying, as they do, their industrial competitors (England, France, Belgium, the United States, etc.). The same may be said of synthetic indigo, which at this day already supplies more than one half of the world's entire use of indigo and will before long drive the natural article out of the market. A German chemical factory is now manufacturing synthetic camphor after a new process of its own, which, it is said, will have the same effect upon the camphor market as the introduction of the artificial indigo has had upon the indigo market.—RICHARD GUENTHER, *Consul-General*, Frankfort, Germany, May 18, 1904.

GERMAN COMMERCIAL INTERESTS IN JAPAN.

In 1900 there were 65 German warehouses in Japan doing business, with an aggregate capital of $5,000,000. German industrial enterprises in Japan at that time were valued at $3,000,000; German interests in Formosa were valued at $1,500,000; and the capital invested in Korea was estimated to be about the same amount. It is not probable that these figures have been much changed during the past four years. Since 1900 Germany's trade with Japan has shown some progress. In 1903 the total exchange of products betwen the two nations amounted to $16,065,000. Of this sum $13,494,600 fell to Germany. It will be seen therefore that the Empire's trade with the Island Kingdom shows to great advantage, and this has been the case since 1900. In 1903, 427 German vessels with a total of 1,277,278 registered tons, discharged cargoes in Japanese harbors. Last year Germany imported $500,000 worth of camphor from Formosa.—*Ernest L. Harris, Commercial Agent, Ebenstock, Germany, May* 13, 1904.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Alton, Kansas.—The Beardslee Hardware Company has been incorporated. The capital stock is $10,000, and the incorporators: Harry H. Beardslee, of St. Louis; Charles L. Beall and Levi Davis, of Alton. The object is to engage in the Hardware and implement business. The building at Second and Ridge Streets will be completed in about two months, when the new company will begin active business.

Baltimore, Md.—The Ford & Norris Company has been incorporated to deal in rope, paper, brushes, tinware, glassware and Hardware, by Milton H. Ford, Richard T. Norris, Edward C. Wollman and William S. Carr, of Baltimore, and Charles L. Leach, of Tuxedo, Baltimore County. The capital stock is $2,000.

Clinton, Iowa.—Merle Adams, of Gilmore, will open an implement store here.

Daytona, Fla.—The Gruber-Morris Hardware Company has been incorporated with a capital of $25,000. to conduct a wholesale and retail Hardware, plumbing and tinning business; to deal in building supplies, undertakers' supplies, furniture, general merchandise, etc. The officers of the company are: M. E. Gruber, president; L. L. Gruber, vice-president; and J. D. C. Morris, secretary.

East Douglas, Mass.—H. S. Farnum & Son, of Uxbridge, will shortly open a furniture and Hardware store on Main Street.

Jackson, Mo.—The Ford Hardware Company has been incorporated to do a general Hardware business; capital stock $10,000, all paid. Incorporators: J. D. Allen, A. C. Ford and R. W. Ford.

Jennings, La.—The Morse Hardware Co. of Jennings and Welsh, has been incorporated to succeed L. L. Morse & Sons. Capital stock $100,000. Officers: Lucius L. Morse, president; Frank E. Morse, vice-president; Bertha E. Morse, secretary; Walter D. Morse, treasurer. These, with Maurice E. Morse, constitute the board of directors.

Rockford, Ill.—The Rockford Manufacturers' Supply Company has been incorporated. The incorporators are: Frank G. Hoagland, E. C. Traner and George Traner, and the capital stock is $10,000. The idea is to make the new concern a branch of the Lock Company. The latter expect to do a jobbing business, handling cabinet Hardware and other supplies for the manufacturers and the new company is formed to take particular care of this branch of the business.

Saratoga Springs, N. Y.—Bessette-Burwell Hardware Co. has been incorporated. Capital $10,000, and directors: L. N. Bessette, F. W. Hardner, of Saratoga Springs, and J. H. Burwell, of Glens Falls.

Springfield, Mass.—Allen-Randall Company, Hardware, has been incorporated; capital $15,000; president, Perry D. Randall; treasurer, Stuart M. Robson.

Changes.

Alliance, Ohio.—L. E. Heisler has sold out his Hardware store to M. H. Curtis, who will continue the business.

Auburn, Iowa.—G. M. Parker has purchased the Mueller Hardware store.

Bessemer, Ala.—Howard Lovejoy has sold his interest in the Smith-Davies Hardware Company to Messrs. Smith and Davies, who will continue the business under same firm name, with W. K. Smith, Jr., president, and George Davies, secretary and treasurer. Mr. Lovejoy has accepted a position in Birmingham.

Carroll, Iowa.—Wm. Arts has purchased the Hardware business of W. Byring.

Corning, N. Y.—Bailey & Ingerick, dealers in agriculture implements, have dissolved partnership.

Corning, N. Y.—Leon H. Ferenbaugh has disposed of his interest in the Hardware firm of McCarthy & Ferenbaugh to William A. Owen, of 63 Ontario Street. The new firm will be known as McCarthy & Owen. The business of the firm has been moved from No. 7 East Pulteney Street, to 77 Bridge Street.

Corning, N. Y.—The Hardware firm of Frost & Williams have dissolved. They started in business in September, 1897, and since that time have done a prosperous business. Mr. Frost has been the active manager until recently, when his health failed. Aaron F Williams succeeds to the entire ownership of the business For several years he has given close attention to studying the Hardware trade. He will be assisted in the management by J. O. Reynolds of Hornellsville, who has been connected with the Hardware store of Rose & Co. for 12 years.

Ellson, Iowa.—L. E Anderson succeeds to the Hardware business heretofore conducted by F. W. Long.

Fairbank, Iowa.—R. M. Merriam has disposed of his Hardware business to John Louck.

Fremont, Ohio.—A. A. Wormwood and G. W. Sprout, the latter of Kansas station, have jointly purchased the Frank Heflinger Implement and Repair Store on West State Street. The new firm will be styled Sprout & Wormwood, and the title of the firm will be "Farmer's Supply Co." The concern will handle all kinds of farming implements, buggies, pumps, windmills, twine, stock food, oils, etc., etc.

Garey, S. D.—E. A. Huffman has purchased the Hardware business of W. E. Austin.

Goldfield, Iowa.—Wm. Braden succeeds to the Hardware business formerly conducted by A. MacEashron

Houghton, Mich.—The Portage Lake Hardware Company of Hughton has purchased a diving outfit and will cater to the marine repair business. John Richards has been employed as a diver.

Johnstown, Pa.—Buterbaugh & Claycomb, Hardware dealers, have moved their store into their own building on Graham avenue.

Lisbon, N. Y.—Akin & Long have purchased the Hardware stock of Mac Kelley. Mr. Kelly intends going west.

Lubec, Me.—The firm of McCurdy & Geagan, proprietors of the Hardware store in the Gillise block, has been dissolved by mutual consent, and in the future the business will be conducted by John H. McCurdy, who assumes all liabilities and will collect all bills due the firm.

Manson, Iowa.—Charles Burke has disposed of his Hardware business to Morton & Whittlesey.

Massena, Iowa.—Chas. Lewis has been succeeded in the Hardware business by A. H. Carside.

Middleton, Mich.—Mr. Harner, of Dimondale, has purchased the Hardware stock of P. D. Pease.

Moscow, Idaho.—Collins & Sherer, a Hardware firm, have dissolved partnership, Mr. Sherer retiring. Hal C. Orland, a last years graduate of the University of Idaho, purchased the interest of Mr. Sherer. The new firm will incorporate under the name of the Collins Hardware Company, limited. Mr. Sherer, the retiring member of the firm, will remain in Moscow and engage in some other business.

Nashville, Tenn.—Cato & Miller is a new Hardware firm, succeeding R. A. Cato, who has taken into partnership John K. Miller, a prosperous farmer.

Oshkosh, Wis.—The Oshkosh Hardware Manufacturing Company, with E. P. Sawyer as president, and capitalized at $150,000, decided to dissolve, as the result of differences between the promoter, F. N. Perkins, and stockholders.

Paton, Iowa.—Jobes & Patterson have succeeded to the Hardware business of J. F. Pemble.

Piqua, Ohio.—The Hardware firm of Woodcox & Taylor, consisting of I. N. Woodcox and Willis Taylor, has been dissolved, I. N. Woodcox assuming all the indebtedness of the said firm, and receiving all money due.

Pittsburgh, Pa.—The property occupied by Logan, Gregg & Co., wholesale Hardware merchants, on Seventh Street, which is owned by the firm of Arbuckle & Co., has been purchased by the former for a consideration of $185,000 cash. The property contains 8,300 square feet space and is improved with a modern six-story brick and stone office building and warehouse. Logan, Gregg & Co. have purchased the property for their own use and will continue in it their business.

Poland, N. Y.—E. C. Cruikshank has sold out his furniture and Hardware business to Arthur Sprague, who has taken possession.

Sterling, Ill.—Samuel Frank has sold his interest in Frank Brothers' implement store to his brother Jacob, who will conduct the business alone in the future.

Tacoma, Wash.—The Henry Mohr Hardware Company has bought two lots, the consideration being $650 each. It is the intention of the firm to erect at an early date a building on the premises for the accommodation of their wholesale Hardware business.

Waco, Texas.—The Bomar Hardware & Buggy Company amended its charter by increasing its capital stock from $20,000 to $40,000.

West Lima, Ohio.—W. I. Griffith succeeds to the Hardware business formerly conducted by S. C. Ommerman.

West Union, Iowa.—The Hoyt Hardware Company have disposed of their business to Henry A. Ebert.

Yazoo City Miss.—The Crane-Himman Hardware Company will replace the building recently destroyed by fire with one that will be almost an exact duplicate. Work has already begun, and the building will be pushed to completion as soon as possible.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Bloomfield, N. J.—The Combination Rubber Manufacturing Company has been incorporated; capital, $150,000. Incorporators: Edward H. Garcin, Harry L. Hepburn and Alfred H. Howe.

Bridgeport, Conn.—The Grant Manufacturing Company has been incorporated. The company will deal in metals, machinery, tools, etc. The authorized capital stock is $50,000, and business will be commenced with $30,000. The incorporators are: J. G. Kingsbury, Theodore R. Hugo, George B. Thorpe, Fayette C. Clark and A. E. Kingsbury, all of Bridgeport.

Chattanooga, Tenn.—The Volunteer Disc Plow Co., with a capital stock of $50,000, has been incorporated for the purpose of manufacturing plows exclusively, and work on the plant will commence in the near future. The incorporators are: L. W. Llewellyn and C. A. Raht, S. V. Weeks, L. W. Llewellyn and R. R. Cooke.

Chicago, Ill.—Chicago Tool and Supply Company has been incorporated; capital, $15,000; manufacturing pneumatic and electric tools and supplies; incorporators: Carl R. Green, George H. Hayes, Thomas J. Peden.

Easton, Pa.—The Eagle Fibre Company has been incorporated to manufacture fibre vessels, such as pails, etc. They are erecting two brick buildings at Stockertown, which will be 40x150 and 36x90 feet respectively, in which to manufacture their goods.

Gibsland, La.—Mr. Bishop, of Tatum, Texas, will start a factory for the manufacture of cant-hook handles, axe helves, base ball bats and other varieties of woodwork.

Lafayette, Ind.—The Lafayette Stove and Foundry Company is a new concern organized for the manufacture of stoves. The following are the directors: Jeptha Crouch, Evan Shelby, J. D. Bartlett, George E. Kendall and Frank S. Moore. The directors have been instructed to incorporate at once. There will be a meeting held for the election of officers.

Lebanon, Pa.—The Imboden Harrow and Roller Company has been incorporated by Gobin & McCurdy. Isaac C. Grant and Philip Imboden are the incorporators and directors. The purpose is the manufacturing of combined harrows and rollers in North Cornwall township. The capital stock is $5,000.

Norfolk, Va.—The H. W. Rogers Cutlery Company has been incorporated. The capital stock is not to exceed $10,000, and W. H. Rogers is named as president.

Paterson, N. J.—Favorite Pan & Utensil Co. has been incorporated. Objects, manufacture and sale of household novelties and utensils; capital, $25,000. Incorporators: Jacob H. Nellis, Andrew A. Kaeffer, Hugo J. Seibert, Matthew D. Connell, Paterson.

Philadelphia, Pa. — The Chamberlain Metal Weather Strip Company has been incorporated. Capital stock $5,000.

Phoenix, N. Y.—The Michael C. Ryan Company has been incorporated. It is proposed to manufacture and sell novelties, metal goods, Hardware specialties, etc. The capital stock is $5,000. The directors for the first year are as follows: Michael C. Ryan, of Phoenix; Rollo G. Jermyn, of Scranton, Pa., and George H. Bond, of Syracuse.

Pittsburgh, Pa.—The Keystone Axle Works has been incorporated. Capital stock $18,000.

Rochester, N. Y.—The Ricker Manufacturing Company has been incorporated to make and sell elevators, refrigerators and tool making machinery; the capital stock is $25,000. The directors are: Wentworth G. and Marcena S. Ricker and Richard J. Cooper.

Shelby, Ohio.—The Standard Manufacturing Company has been incorporated; capital, $10,000; washing machines, by Francis Brucker, A. L. Stump, J. A. Bushey, Charles L. Bushey, Margaretta Brucker.

St. Louis, Mo. — Ford Manufacturing Company has been incorporated by Ethelbert T. Ford, St. Louis; Charles and Edward S. Sieber, Webster Groves, Mo.; to deal in and manufacture machinery, implements, etc.; capital stock, full paid, $15,000.

St. Paul, Minn.—The North Star Wrench Company, a $1,000,000 concern, has been incorporated. The company will manufacture a patented wrench and other automatic tools. The incorporators are: R. B. Bigbee, Thomas L. Billingsley and Franklin H. Griggs. Thomas L. Billingsley, one of the principal incorporators, is assistant superintendent of the Twin City Rapid Transit Company, and Frank H. Griggs is a St. Paul attorney.

Streator, Ill.—The firm of Gahm & Doermann, which is soon to erect a factory building 42x60 feet, and one story high, intends to manufacture Hardware specialties, grain elevators, and other patented articles.

Tacoma, Wash.—The Everett Sash and Door Company has been incorporated. The capital stock is $10,000. The incorporators are: Philip McConnell, William Rasmussen and L. G. McConnell. This action is taken preparatory to the enlarging of the present plant.

Toledo, Ohio.—The Toledo Stove and Range Company has been incorporated. Capital stock $150,000. Incorporators: George G. Metzger, A. K. Detwiler, Frank Coughling, George D. Wellis and W. B. Duck.

Washington, D. C.—National Steel and Automatic Tool Company has been incorporated; $750,000; Frank H. Farnham, Benjamin P. Friederichs, Joseph Griffith, Albert Popkins, Emmett P. Bunyea, James L. Skidmore and John W. Tucker.

Washington, D. C.—The Southern Disney Shade-Fixture Company has been incorporated; capital stock, $5,000; incorporators: H. K. Kondrup, W. A. Green and William Disney.

Changes

Brantford, N. Y.—The Verity Plow Company announce that they will proceed immediately with the work of erecting large extensions to their factory. The capacity of the company will be doubled, and there will be employment provided for 250 more men.

Carthage, N. Y.—D. J. Renaud, manager of the Carthage brass foundry, has secured the right to manufacture the famous Deer River plows, and the patterns, equipment, etc., are to be removed to Carthage, where the business will be carried on in connection with the brass foundry on Parham Street.

Gadsden, Ala.—The A. & J. Stove Works in this city are spending $10,000 in improvements and enlargements and the plant will start up again at once with double the ordinary force. The mounting room building has been enlarged by the addition of a room 60x100 feet, thus doubling the floor space. The warehouse has also been greatly enlarged and a great deal of improved and very costly machinery is being placed, all of the very latest pattern. When the stove foundry starts up it will give employment to fifty men and will turn out seventy-five complete stoves every day. The plant is being operated under the personal supervision of Otto Agricola, the president.

Hanover, Pa.—The Hanover Plow Handle Company have moved their machinery, tools, supplies, etc., from the shops they have hitherto occupied, in the old Penn box factory building near power house, in the West End, to their newly erected shops in the East End, opposite the foundry and machine shops. The new shops comprise a brick main building 50 by 150 feet, two large dry kilns, engine and boiler house, and other smaller buildings.

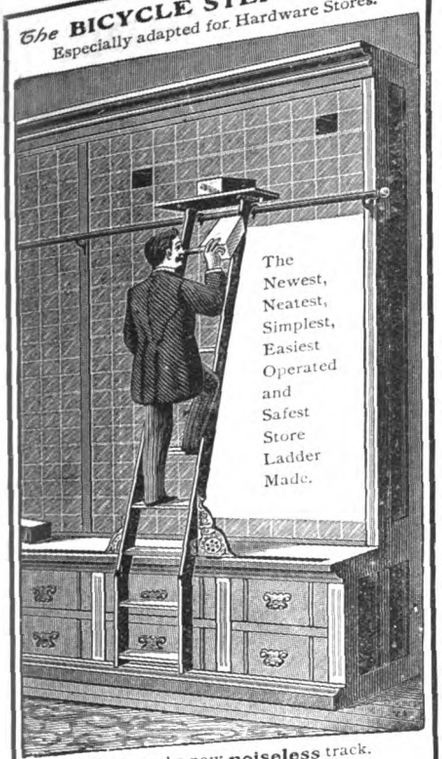
Huntsville, Ala.—The Turner, Day & Woolworth Handle Company of Louisville has purchased the Gurley Handle Company and will operate it as a branch plant. The company, it is understood, contemplates establishing an immense finishing plant in Memphis.

Little Falls, Minn.—An amendment to its articles of incorporation was filed by the Anderson Company, making St. Paul the company's headquarters. The concern manufactures and sells agricultural implements.

Quincy, Ill.—The Gem City Stove Co. have moved into their handsome new office and salesroom at the foot of York Street.

Sharon, Pa.—The South Sharon works of the American Steel & Wire Company will be enlarged by the addition of 70 wire nail machines of the latest pattern. The nail mill will close July 1 for three weeks to install the machines.

Stoughton, Wis.—J. L. Irving, trade manager for the Moline Plow Company, has arranged to invest $400,000 in new shops to employ about 1,000 men in the manufacture of such agricultural implements as have heretofore been purchased at wholesale by the company from other factories. A tract of eleven acres within the city is being secured by the company.



Fires.

Dubuque, Iowa.—Fire destroyed the Fox-Hagge Company handle factory. Loss, $14,000, with only $2,000 insurance.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Akron, Ohio.—The Alkali Rubber Company, with a capital stock of $1,000,000, has been incorporated by George G. Allen, Frank H. Watters, James W. Hoffert, Harry Williams and Clara L. Smith, all of Akron. Work on the erection of a new factory to be located here is expected to be started in a few weeks, and it is said the company's goods will be in the market before the end of the Summer.

Buffalo, N. Y.—National Battery Co. has been incorporated. Capital stock, $500,000.

Chanute, Kan.—The Chanute Hardware Company has begun business with a complete stock of Hardware, bicycles and sporting goods. P. H. Dunning and E. M. Bales, the partners in the enterprise, removed to Chanute from Sioux Falls, S. D.

Cleveland, Ohio.—The Worthington Ball Company has been incorporated with a capital stock of $10,000 to manufacture golf balls and similar articles.

Indianapolis, Ind.—The American Manufacturing Company is a new company which has been organized to manufacture children's lawn swings.

Ithaca, N. Y.—Motor & Mfg. Works Co. has been incorporated with $25,000 capital stock.

Kansas City, Mo.—Ninety-seven acres of land adjoining Holmes Park, about fourteen miles south of Kansas City, have been purchased by the Excelsior Powder Manufacturing Company. Work will be begun right away on the plant, which is to be in operation by November 1. The plant will have an annual capacity of 240,000 kegs of powder and will employ about 100 men. This company was recently incorporated in New Jersey, and has a paid-up stock of $100,000, much of the stock being owned by St. Louis and Eastern parties.

Portland, Me.—The F. O. Bailey Carriage Co. has been incorporated with $150,000 capital stock.

Reading, Pa.—Daniel Gerhart, an experienced gunsmith, and Henry Trout have formed a partnership and opened a store and shop for the sale of fishing tackle, sporting goods and the repair of firearms, etc.

Springfield, Mass.—Bowman & Gregg Company, motors, lamps, etc., has been incorporated; capital $3,000; president, William M. Gregg; treasurer, George W. Bowman.

Syracuse, N. Y.—Lee, Cowan & Bowen, manufacturers of automobile springs, have incorporated, with an authorized capital stock of $50,000.

Toronto, Can.—A company has been incorporated in Toronto and active preparations begun to erect a factory and equip it with machinery for the manufacture of the sub-target gun machine, invented by Henry H. Cummings, of Malden, Mass., and made in this country by the Sub-target Gun Company, of Boston and Saco, Maine. The Canadian company has established an office in the Canadian General Electric building in Toronto. Its title is the Sub-Target Company, Ltd. Its capital stock is $1,000,000.

Washington, D. C.—The Anglo-American Arms & Ammunition Company has been incorporated by D. S. Fletcher, N. A. Smith and E. J. Dimmick.

Waterloo, Iowa:—Waterloo has another manufacturing plant which will produce racing bicycles for horsemen. The location of the plant is on Newell Street. The proprietor is S. E. Jerald. From the raw material is produced the finely finished article for the market. Not only is the racing bicycle made, but also light wagons, sulkies, etc.

Changes.

Allegheny, Pa.—Artzberger Automobile Co. have commenced the erection of a new three-story brick garage and factory at 526-528 Second Street, which will be completed about September 1. The property is 40x140 feet.

Augusta, Me.—The Rhode Island Electromobile Co. has increased its capital stock from $500,000 to $700,000.

Boston, Mass.—National Automobile & Motor Co. have changed the firm name to Monroe Engine Co.

Brainerd, Minn.—A. E. Veon has purchased the stock of sporting goods and the business of Edward White, Front Street, and will carry a full line of guns, tackle and all sporting goods.

Buffalo, N. Y.—Buffalo Motor Car Co. has moved from 918 Main to 893 Main Street.

Buffalo, N. Y.—Ephriam Bros. recently removed from their old stand to new and larger quarters at 577 Main Street, where they are now carrying a complete line of sporting goods, bicycles, cameras, automobiles and supplies of all sorts.

Buffalo, N. Y.—E. R. Thomas Motor Co. have purchased the factory formerly operated by the Conrad Motor Carriage Co., containing 40,000 square feet. It will be used mainly for making bodies for Thomas cars. Its size will shortly be doubled and the company also contemplate the erection of additional buildings on a new plot of ground just contracted for.

Buffalo, N. Y.—George Andrews has succeeded to the business of the Hayes Automobile Company.

Burlington, Wis.—S. A. Wright & Co. have leased new quarters on the corner of Pine and Washington Streets, where they have installed their stock of sporting goods and bicycles.

Chicago, Ill.—Roach, Hirth & Co. have removed from their old store to their splendid new quarters in the Powers Building on Wabash Avenue and Monroe Street.

Chicago, Ill. — The Egyptian Powder Company has increased its capital stock from $100,000 to $150,000.

Chicago, Ill.—The Federal Manufacturing Co., of Cleveland, has gone out of the bicycle parts manufacture and will make automobile parts instead. Its saddles and other bicycle parts will be made in the Pope factories here.

Cleveland, Ohio.—The Gatham Powder Company has decreased its capital stock from $100,000 to $10,000.

Denver, Colo.—S. H. St. John & Son have moved from 526 Eighteenth Street to their new storage and repair station at 1416-1418 Court Place. This building is 50 x90 and they occupy the ground floor and basement, giving their attention to storing, repairing and manufacturing automobiles.

Detroit, Mich.—Dingfelder Automobile Co. have moved from 958 Jefferson Avenue to 41-43 Washington Avenue.

East Toronto, Can.—The Warren Sporting Goods Company has succeeded McDowall & Co., dealers in sporting goods at 10 King Street. A new and complete stock has been added, especially in the line of fishing tackle. A. R. Warren, the new manager, was for a number of years with McDowell & Co. and Charles Stark & Co.

Emporium, Pa.—The Keystone Powder Company, whose plant near Emporium was wrecked recently by two terrific explosions, has been erecting new buildings to replace those lost, and installing new machinery.

Holyoke, Mass.—Matheson Motor Car Co. will remove their plant to Detroit, Mich.

Latrobe, Pa.—The J. Kowalsky Engine Co. has removed to its former location at Verona, Pa., and in addition to automobile engines will manufacture 16-foot gasoline launches.

Milwaukee, Wis.—A sporting goods department was estabished by the Boston Store recently. Firearms, fishing tackle, golf, base ball, tennis and other outing goods and games are carried in stock.

Montreal, Quebec.—General Automobile Co. of Canada have moved to 1022 Dorchester Street. Their downtown garage has been moved to 308 St. James Street.

Newark, N. J.—Coover-Ball Co. has increased its capital stock to $50,000.

New Brunswick, N. J.—India Rubber Company have moved their offices to 16 Warren Street, New York City.

New Haven, Conn.—The Winchester Repeating Arms Co. will erect a factory and office building each to be three stories high with basement. The factory building will cover 45x200 feet of space, while the office building will be 50x120 feet in size and will contain two large fire-proof vaults. The material will be brick.

New York, N. Y.—Charles E. Miller, 97 and 99 Reade Street, has opened a branch store, Nos. 202 and 204 Columbus Avenue, Boston, Mass. This new Boston store is in the center of the automobile district of that city, and has an additional entrance at No. 36 Isabelle Street. It fronts on three streets, Columbus Avenue, Isabelle Street and Berkeley Street, being triangular in shape.

New York, N. Y.—John Wanamaker has removed his automobile department from 138-140 E. 57th Street to store at Broadway and 10th Street.

New York, N. Y.—The Upton Gear Co. has been succeeded by the Upton Motor Co., a corporation capitalized at $20,000.

Philadelphia, Pa.—The Helios Mfg. Co., Bridesburg, Philadelphia, is a reorganization of the old Helios Upton Co., which failed some time ago.

Pleasant Prairie, Wis.—Rebuilding of the plant of the Laflin & Rand Powder Co., destroyed by fire late in May, was immediately commenced, and when finished will be one of the largest in the West.

Red Wing, Minn.—Wm. Hendel & Son has moved to 1917 Fifth Avenue, South Minneapolis, Minn.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

From

BLACKLOCK FOUNDRY

are

Unequalled for Durability.

Each set has Wrought Iron Dead Black Finish.

As lively sellers they are unsurpassed. Let's give you further information about them.

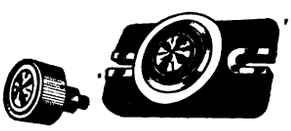
BLACKLOCK FOUNDRY,

SOUTH PITTSBURGH, TENN.,
U. S. A.

Improved Natural Stone Germ Proof Water Filters

Every Filter guaranteed perfect and absolutely germ-proof.

Display Card with every shipment.

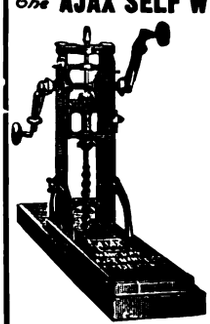


Send for prices and discounts.

We manufacture Sanitary Stone ware of every description.

Fulper Pottery Co. Flemington, N. J

SHEET METAL STAMPING, BLANKING, FORMING COMBINATION AND DOUBLE ACTION DIES made to order.



Our ability is the product of 25 years of experience. All work guaranteed.

HUNT & DORMAN MFG. CO.

15-21 Bright St., Cleveland, Ohio.

The **AJAX SELF WITHDRAWING WOOD BORING MACHINE**

does not require a special auger; will bore to any depth; strong and durable—all important parts of malleable iron. Sold by the whole sale hardware trade.

AJAX MFG. CO.,

Pittsburgh, Pa.

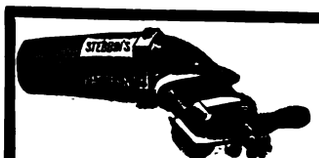
Manufacturers of the Ajax and Phillips Wood Boring Machines, Standard and IXL Saw Gummers, Collins Self Feed and Dudgeon Style Tube Expanders, Cutters, Swages, etc.

UDELL

DRYING RACKS

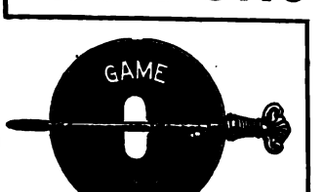
It's up to you whether you intend to worry along with Drying Racks that give little satisfaction to your customers.

It is needless for us to remind you that our



Globe Rack

is the strongest made. Stretchers are of Hard Wood, held open by Malleable Iron Hinge Braces. Closes compactly.



Five feet high. 13 stretchers. Weight 120 pounds per dozen

The Udell Works

Indianapolis, Ind.,
U. S. A.

The TAYLOR & BOGGIS FOUNDRY CO.

MANUFACTURERS OF

LIGHT GRAY IRON CASTINGS,

BUILDERS' HARDWARE.

Dampers, Oil and Gas Stoves, Furnace Lamps, Molasses Gates, Letter Boxes, Hardware Specialties.

OUR GASOLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.

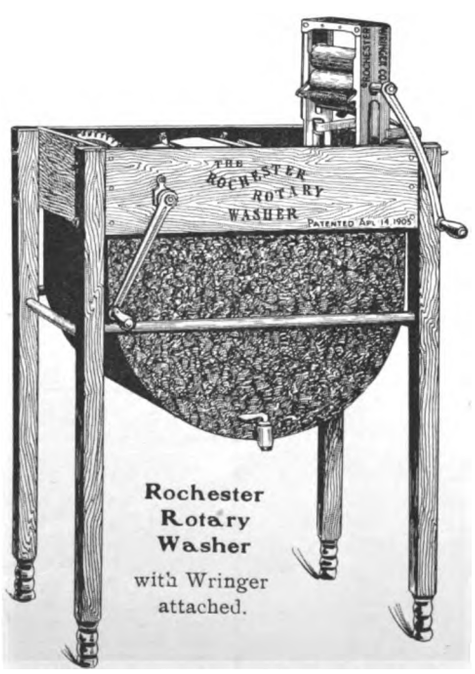
WHY IS THE O.K.

The Best Rotary Washing Machine?

BECAUSE



1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing,** reducing **the friction** and thus making machine so **light running** and almost **noiseless.**
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without **rubbing** them to pieces.
4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

New York Office. 139 Centre Street.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

"Cheer Up and Seven Other Things"

By CHARLES AUSTIN BATES.

"Charles Austin Bates always wields a vigorous pen, but his latest work "Cheer Up and Seven Other Things," contains eight of the most stirring business talks that have ever appeared over his name.

The titles "Cheer Up," "Making A Front," "Making Good," "Other Peoples Brains," "The Ill Fortunes of Brother Bill," "Things That Can't Be Done," "And All Is Advertising," and "How Shall A Young Man Succeed?" indicate the nature of the book. Rugged, straight-from-the-shoulder common sense is the keynote, yet the vein of humor running through every page makes it wonderfully entertaining.

The head of the firm can read "Cheer Up" with much profit, and every young business man who wants to make his mark will find the book worth many times the price.

"A small volume packed with sharp edged chunks of wisdom. Mr. Bates is an expert writer on advertising and what he does not know about the right way and the wrong way of advertising so as to attract public attention is hardly worth knowing.

"His bright little essays in the volume are all on the subject of advertising or business hints, and business men can hardly fail to profit while being entertained by reading them. Other people will also enjoy the little book for its practical wisdom and the cheerful spirit pervading its pages."—*The Cleveland Plaindealer.*

"In his own way Mr. Bates has the same kind of shrewd humor that made the "Letters From a Self-Made Merchant" so popular, and a good deal of the common sense business morality that marked the equally popular "Letter to Garcia." There are fun and snap in this little book."—*The Outlook,* New York.

There's a Reason

why every Hardwareman in the land should own one of **Daus's "Tip Top" Duplicators.**

¶ With **Daus's "Tip-Top"** you can make from 50-100 pen or typewritten copies from one original bill, circular, invoice or letter. A ten days' trial—no deposit required—will convince you of its merits. Shall we send it?

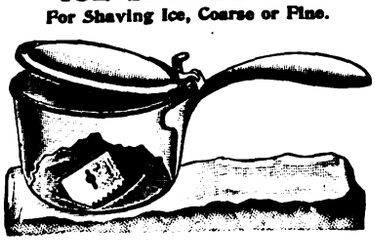
"For Those Who Want the Best"

DOUBLE FALCON WRENCH



An inch and three-quarter off-set to allow work close to the wall or ceiling. Each one has two jaws, right and left hand. Made on an improved principle over the alligator wrench. Fixed and flaring jaws, the combination of the grasping jaw and serrated face, with the bearing jaw with straight bearing face. Grasps and releases a pipe with ease and certainty, the curved outline of the pipe finding a tangential bearing in all parts of the opening. The curved jaw first engages the pipe, and then the straight jaw slips under the pipe until jammed tightly into the opening between the jaws, the action being entirely automatic. A forging of the finest tool steel, teeth accurately milled, hardened in the best possible manner, polished and finished with cyanide.

HARDWARE

The Mexican Permanent Exposition Co., Mexico City, announces that their representative, E. H. Talbot, will be located until November 30th in the Mexican section, Manufactures Building, St. Louis, where arrangements can be made by American manufacturers for space in the Mexican Exposition, which will be ready about October 1st.

✤

The Rogers Iron Company, Springfield, Ohio, have changed their name to "The William Bayley Co." This change does not in any way affect the management. The capital stock is held exactly as heretofore. William Bayley, the president, has for a term of years been the head of the institution, and during this time he has originated many mechanical contrivances that have improved the product and increased the output, and consequently have reduced the cost of manufacture. William Bayley's sons have grown up with the business, and during later years have taken prominent parts in its management. Many of the men who have to do with design of work, and of the artisans who have to handle the actual execution of the work, have been in their present positions during terms of ten and some of them twenty years.

✤

The O'Neill Elevator Co., 628 Cherry Street, Philadelphia, Pa., manufacturers and erectors of Elevators and Dumb-waiters, have incorporated. John T. O'Neill, the president, has been actively engaged in the elevator business for the past fourteen years. Harry K. Yarnall, the treasurer, has been associated with Mr. O'Neill for many years in the business, and he has a thorough knowledge of manufacturing and erecting elevators. Thos. Madden, the secretary, has been in the Hardware specialty business for a number of years, and is well acquainted with the wants of the trade. The company report a good business with the Hardware merchants.

✤

Consul Alban G. Snyder, Bogota, Colombia, says in a recent report: "This consulate-general has recently received a great many requests for catalogues of various kinds of American goods, such as watches, knives, shoes, rifles, shotguns, revolvers, and all kinds of sporting arms and ammunition, engineering goods, and drawing instruments. I have established a public reading room here, which is open to the public from 2 to 4 o'clock each afternoon except Saturday and Sunday. If American manufacturers and merchants will send me their different catalogues they will be placed on file in this room, and it will be seen that the greatest good possible results therefrom."

✤

NASHVILLE'S HARDWARE BUSINESS.

The Hardware business for the six months just closed, says the Nashville, Tenn., *American*, shows a gratifying increase in volume over the preceding years. The Hardware business of the city for 1903 was almost $4,000,000. The six months just closed showed a gross business of, easily, $2,250,000, and at that rate of increase 1904 will show at least a half million greater business than the year before. While it may not be generally known Nashville is the fourth Hardware center of the United States, the order of the cities whose business exceeds Nashville being St. Louis, Chicago and Louisville. A continued increase like that shown for the first six months of the year will tend towards elevating Nashville to third or possibly second place within a few years.

THE WILKE MFG. CO.

The Wilke Mfg Co., Anderson, Ind., in its Worlds Fair exhibit in the Agriculture Building, Aisle A, Block No. 123, presents a complete and elaborate line of fine glass-lined Refrigerators. In addition is shown a complete Refrigerator automatically chilled with self-contained diminutive refrigerating plant, the refrigerant being anhydrous ammonia, power ¼ horse-power electric motor, and the system direct expansion per coil in brine tank placed within ice bunker. The machine is thoroughly automatic, regulating temperature within provision compartment per thermostatic government of damper in cold air downfall. They also show their Triple Cooler, in which there are three enameled iron tanks, the central one being for ice water, which chills the adjacent tanks, which may be used for cream, milk or other liquid. Another novelty is a line of porcelain Cigar Cases.

M. S. BENEDICT MFG. CO.

We notice on the first page of the June 25th issue of the *East Syracuse News* two photographic reproductions having reference to the continued success of the M. S. Benedict Mfg. Co., of that place. One large group of twenty persons, representing the officers and representatives of this enterprising and progressive company, while the larger group represents every one of the 250 employees, whose smiling countenances give ample evidence of a satisfactory environment and happy conditions of labor, in which they add to the prosperity and reputation of this well known company. The photographs were taken on the occasion of a recent gathering of a number of the officials of the company, including a majority of the travelling representatives who visit the factory at least once a year for the purpose of looking the plant over and selecting a line of samples suitable for the Fall trade. The business done by this concern during the first six months of 1904 at this factory is the greatest in its history. The working force is the largest ever employed and the factory is running twelve hours a day in order to fill the orders which they are receiving from all parts of the United States and Europe. The factory at Ottawa, Ill., employing 125 people, is running on full time and there is a great demand for the line of goods manufactured there. Owing to the increase in the volume of business done at the East Syracuse plant, the company are now erecting a modern building, size 40 by 40, with a brick vault adjoining, size 14 by 14, wholly for office purposes. The part of the factory now used for office purposes will be converted into a stock room as soon as the new offices are completed.

✤

An experimental dairy is to be established by the Spanish Government at Valladolid, Spain. This ought to prove a good opportunity for the introduction of American-made cream separators and other dairy apparatus.

TRADE WINNING METHODS.

E. Curtis McKenney, 314 Central Street Saugus, Mass., shows plenty of "down East gumption" in his advertising methods, samples of several "flyers" have been forwarded to us. He believes in getting such announcements before the prospective buyers as frequently as possible, he having received excellent returns from their distribution. In his opinion it would pay any Hardware man to put out well written flyers that appeal to the consumer. One in his original style is the following:

Why Not Trade in Saugus?

The Hardwareman's
- Flyer No. 1. -

SEASONABLE GOODS.
HEADQUARTERS FOR

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The vacation season being at its height, the working forces left at work are able to cope with the labor problem in their respective establishments, and even then business affairs do not paralize all their energies; they could stand a greater degree of activity.

Every preparation is being made for a good average Fall Trade in which a continuance of prosperous conditions are assured but the programme regarding the wants of the season's business is laid out on conservative estimates. Perhaps it is just as well no evidence exists at present of any fluctuations in the market prices of leading staples that would inspire a buyer with any speculative anticipations. Productions of many of the lines that are subject to a possible recession in prices and in which raw material at lowest prices for the season, has been used, have been so restricted in the output in a way that a scarcity may be anticipated, the market remaining firm.

Stocks in dealers' hands, either the jobbers or the retailers, on a great many of the strictly Hardware lines, are far from being in overstocked condition. The lateness of the opening of the Spring business prevented a number of supplementary orders going forward, some portions of which under present conditions might have shown up in the annual inventory. As it is those lines are in small volume, and the stocks on hand are in favorable condition to stimulate good orders when the time comes to make them up for the Season's requirements

The business among the Manufacturers has been held so well in hand, there was little urging of large orders late in the Spring, under the customary pretext of a promised advance at a later date, that would affect prices for Fall trade. Inability, from a state of limited production, to ship promptly in all lines, kept the manufacturers "off the road," and business was permitted to pursue its usual and more regular channel of progression; all of which seems to have had an influence, and stocks today are in a remarkably good state.

Notwithstanding sundry localities where strikes prevail to a large extent in other and non-analogous departments of labor, the Building trades promise in the general outlook, an encouraging season, in which promoted projects will be pushed to their fulfilment. Many operations that were laid aside on account of trade union dissensions are now being reconsidered and if smooth sailing is predicted for the immediate future, the Fall and Winter will give abundant evidence of a restoration of confidence in this important line.

The crops, however, in a year when the election turmoil is apt to prevent too close a concentration on commercial projects, are the main reliance of our political economy. It is fully believed, no matter what wild rumors may occasionally prevail for stock jobbing purposes, that with the expanded territory that has been prepared and planted we shall have, with every drawback or handicap fully discounted, a crop well above the average for a gross value and one of promise to the agriculturalist, who is usually willing to spend his money for improvements, especially when he does not have to borrow it.

Its all right for the Hardwareman and his clerks to take an interest in political affairs, but it must be remembered that talking politics won't sell goods.

A great deal of talk has been heard recently to the effect that the past fiscal year has been a bad one for railroads. The annual report of the Interstate Commerce Commission talks in a different vein. It says that during the past year the track mileage has increased 5505 miles, a larger gain than in any year since 1890. The number of persons on the payrolls was 123,222 greater than during the preceding year, the whole number employed being 1,312,537 The roads carried during the year 45,013,030 more passengers than during 1902

DON'T TALK POORHOUSE.

Is business dull? Then the first thing to do is to eliminate that graveyard sigh and the almshouse line of talk. No sane man would ever think of telling all his neighbors that his wife had cold feet or that his mother-in-law was in the habit of reading curtain lectures to him. Why is it then that so many business men, just as soon as trade drops off a little, put on a long face and go about telling how business is going to the bow-wows and that its "me to the poorhouse" in a few short moons. People in general dislike to disappoint a sad man and if you persist in telling folks that you have embarked for that institution of charity no one will be unkind enough to pull you off the train.

Suppose trade is dull; be thankful that it is not worse. Then wipe your spectacles and go hunting around for some method of injecting a little life into things, and do it with a smile. If you must look sour once in a while, go down cellar behind the nail kegs and have it out with yourself; then come up with a smile that don't come off until you feel compelled to retire and have another round.

A recent magazine writer tells of an old man who lay on his back for fifteen years, yet no one ever saw him when he wasn't bubbling over with gratitude. He thanked the Lord for his former health and strength; for his fortunes and that his misfortunes were not greater; for the sunshine of the hottest day and the rain of the most protracted storm; for the pain that chastened his spirit; and when he was dying he thanked the Lord that it was during a spell of good weather, so that they would have a pleasant day for the funeral.

Look pleasant, be thankful and hustle.

B.

DEATH OF WILLIAM W. JENNINGS.

William W. Jennings, vice-president of the Russell Jennings Mfg. Company, of Deep River, Conn., died at Deep River, Tuesday, July 5, aged 67 years. He was born in Easton, Conn., September 9, 1836. At the request of his uncle, Rev. Russell Jennings, inventor of the Jennings Bit, he went to Deep River to assist in the management of the business, the Russell Jennings Company being formed in that year, William W. Jennings becoming its assistant treasurer. He afterward became a more important factor in the management, and was its vice-president for a number of years He was a veteran of the Civil War and served in the General Assembly of Connecticut for several terms.

THIS LOOKS LIKE PROSPERITY.

The foreign commerce of the United States in the fiscal year 1904 is the largest in its history; the exports of manufactures are larger than in any preceding year, and the exports of domestic products exceed those of any other country.

This is the substance, in a single sentence, of the record of the year's commerce just announced by the Department of Commerce and Labor through its Bureau of Statistics. It shows, taking up the figures in detail, that the total exports during the year ending June 30, 1904, are $1,460,829,539, against $1,420,141,679 in the fiscal year 1903, an increase of $40,687,860; that the imports for the year are $900,745,084, against $1,025,719,237 in 1903, a decrease of $34,974,153; and that the excess of exports over imports is $470,084,455, against $394,422,442 in 1903, an increase of $75,662,013 in the excess of exports over imports.

Comparing the figures of 1904 with those of earlier years, it may be said that the total exports are larger than in any preceding year except 1901, that the imports are greater than in any preceding year except 1903; and that the total commerce—the imports and exports combined—in 1904 is greater than that of any preceding year. The total commerce of the year amounts to $2,451,574,623, against $2,445,860,916 in 1903, and $2,310,937,156 in 1901, the years in which imports and exports, respectively, made higher records than those of 1904. Thus, while neither imports nor exports for 1904 reach the high record of a single earlier year the total of imports and exports combined in 1904 exceeds the total commerce of any earlier year.

In manufactures the exports of the year will make their highest record. While the figures of manufactures exported for the full fiscal year 1904 have not yet been completed by the Bureau of Statistics, the fact that the eleven months' figures already completed exceed by 17 million dollars those of the corresponding period of the record year, 1900, makes it apparent that the total exports of manufactures in 1904 will be greater than those of any preceding year.

It is also apparent that the exports of domestic products from the United States in the fiscal year just ended will exceed those of any other country. The United Kingdom is, next to the United States, the world's largest exporter of domestic products, and until within recent years surpassed the United States in its total. During recent years, however, the United States has rapidly gained upon and finally overtaken the United Kingdom in the race for supremacy as an exporter of domestic products.

The first year in which the exports of domestic products from the United States exceeded those from the United Kingdom was 1898, the excess in our favor in that year being about 98 million dollars. In 1899 the pendulum swung the other way, the exports from the United Kingdom exceeding those from the United States by about 35 million dollars.

In 1900 those from the United States exceeded those from the United Kingdom by about 35 million dollars. In the year ending June 30, 1902, those of the United States exceeded those of the United Kingdom by about 8 million dollars. In the fiscal year 1903 the United Kingdom was again at the front, her total of domestic exports exceeding that of the United States by 22 million dollars. In the fiscal year 1904 the United States will apparently be again in the lead, since figures of eleven months already in hand show for that period an excess of 38 million dollars in favor of the United States.

✤

The value of artificial and chemical fertilizers annually used in Italy is estimated at 8,250,000 among which mineral superphosphate, Thomas slag, Chile saltpeter, and ammonia sulphate are the principal items.

✤

The commercial agent of Canada, representing the Dominion's trading interests in Australia, reports that the towns and settlements of Tasmania, Victoria, and South and West Australia are rapidly introducing calcium-carbide lighting plants and implements.

THE IRONMONGERY OF THE DARK CONTINENT.

Peculiar Goods on Exhibition at Peabody Academy.

A Hardwareman would find better business in Africa than would a clothing dealer; or, at least, this was the impression of the writer as he looked over the exhibit of African Hardware in the Peabody Academy of Science, in Salem, Mass. In Africa, spears and knives are huge in size and of heavy metal. But a king's robe of state consists of a curious carved metal collar, while the costume of a girl is so scant that even a statuesque poser on the glistening sands of the modern Atlantic Summer resort would rush into the concealment of old ocean did she wear it as a bathing suit.

Perchance the African savage might welcome the Hardware drummer as a friend, for he is a connoisseur in certain forms of Hardware to be described later, and he might find a warm spot in his heart for the goods of the Hardwareman. But, he might also welcome the clothing dealer, having for him a warm spot in his stomach.

African metal goods have a character of their own. Spears and knives are the chief products of the African smiths, and making them by crude hand processes, the smiths found time to practice the advice now given by the seer of the Roycrofters, and combined art with their handicraft. The African savages don't know how to make steel, but they produce a peculiarly tough and hard iron, considering their utensils. The flames of an African forge are forced by air from a leathern bag driven through an animal's horn, a crude form of bellows.

Although native art is displayed in some of the African implements, yet they are undoubtedly intended more for use than for ornament. For instance, the Peabody Academy of Science collection contains many curiously wrought spears, some broad and flat, some triangular, some flanged, and some of no particular shape. But they all look wicked, and sure to kill.

A glance over the African knives in the Academy's collection takes from the civilized man the dread of the modern surgeon, with a fine kit of bright, sharp steel tools and proclivities towards diagnosing the stomach ache as appendicitis. The African had no fear of the surgeon. A medicine man's rattle, snugly reposing in the corner of the Academy case, shows the savages patent medicine against the devils of disease.

But the African knives beat the world in one feature, that of eccentricity. If any Yankee cutler attempted to reproduce any of the stylish African patterns, he would undoubtedly be shipped off to Mr. Keeley's remodelling factory, or the brain repair shops. One African blade, a simple pattern, looks like a woodcut of a half moon in the Old Farmers' Almanack. Another richer pattern looks like an inverted Kansas corn stalk. It has a main blade, from which spring out on either side at oblique angles two auxiliary blades. All three blades are grotesquely twisted, and their use, or advantage, is a mystery to the civilized mind. This knife, which is about three feet long, came from the Oueille River region.

Another blade isn't so fascinating because it bears the card, "A beheading knife from the BaNagla tribe." The main blade of this knife is in three eccentric curves, and a smaller blade projects from its centre.

Some queerly shaped knives from the Armini tribe cause wonder as to their use until one reads that this is a tribe of cannibals. Very probably the knives were used for fancy carving. An iron spoon, resembling an American small coal shovel both in size and shape, might have been used for missionary soup. A number of wooden spoons, all as big as ladles, indicate that their former owners might have been huge eaters. Sacrificial knives are other cutlery of these African savages, and they are quite as strange looking as the weapons previously described.

Some African hatchet maker employed nature in the manufacture of a strange looking hatchet exhibited in the museum case; a small branch of a tree, and its hardwood knot served for the handle and hammer of the hatchet, while a chisel-like blade, driven into the knot, and sharpened, made a cutting edge. An African axe resembles the cleaver of an American butcher.

Locks, bolts and bars, agricultural, factory, house building and house keeping implements are unknown to these men of the woods. Hence the display at the Peabody Academy of Science of African Hardware is limited almost entirely to weapons of war. A few musical instruments are shown, but most of them are of wood, or animals' horns.

An inspection of the exhibition excites wonder at the simple ways of these picturesque savages, and also stimulates a healthy appreciation of the advanced stages of enterprise and enjoyment of the products of the Hardware trade of this country.

Assignment of Debt—Creditor Not Prevented from Bringing an Action for the Balance.

QUESTION: I owe a man $150, for which I gave him my note payable in three months. On the day the note was due I could not pay the entire amount, but told him I would give him $75 in full settlement of the debt. He accepted the $75 and gave a receipt. The next day he sent me a bill for the remaining $75, and threatens to sue me for this amount. Did not his accepting the $75 in *full payment of the claim* prevent his recovering anything more from me? There was no dispute as to the amount of the original debt.

REPLY: On the facts stated you are clearly liable for the remaining $75. In cases of this kind the law draws a clearly defined distinction. In your case you say there was no dispute as to the amount of the original debt for which you had given your note. You were therefore legally bound to pay $150 on the day the note was due. If the creditor promised to accept $75 in full payment of the claim there was no consideration for his promise, since in paying him the $75 you were only doing what you were already legally bound to do. The mere doing of a part of that which a person is under a previous legal duty to perform, is not a consideration for an agreement to release him from the balance of his legal obligation.

Had there been a dispute as to the amount due, as for example, might be the case when services were rendered or work done, in regard to the value of which the parties honestly differed, then a payment of a certain sum and the acceptance thereof in full payment of the debt would estop the creditor from bringing an action for the balance. Where there is a bona fide disagreement in regard to the extent of the debtors liability, the law favors the adjustment of the controversy without judicial intervention, and will not permit the creditor to accept and retain money which has been tendered by way of compromise, and then successfully litigate with his debtor for the recovery of a greater sum. But this rule has no application where the amount of the debtor's liability is not in good faith disputed, but the payment is less than the sum admitted to be due.

Where Judgments Hold.

QUESTION: A man in Chicago owes me $1,000, which he refuses to pay me. I live in New York State and consequently have not been able to see my debtor personally? I have heard, however, that he is coming to New York to live. I understand that he has considerable property in Chicago, but I do not think that he has any here. Can I reach his property in Chicago?

REPLY: If you sue your debtor in New York State and obtain a judgment against him you can only reach the property of your debtor which is situated in the county where your judgment is docketed or where a transcript of it has been filed. However, the judgments of the courts of record of one State are given full faith and credit by the courts of other States and you could therefore sue in Chicgo all your judgments obtained here, and in this way you could reach your debtor's property if you knew its whereabouts. If your debtors were within the State you could obtain jurisdiction over his person, but not over his property unless the property were within the State.

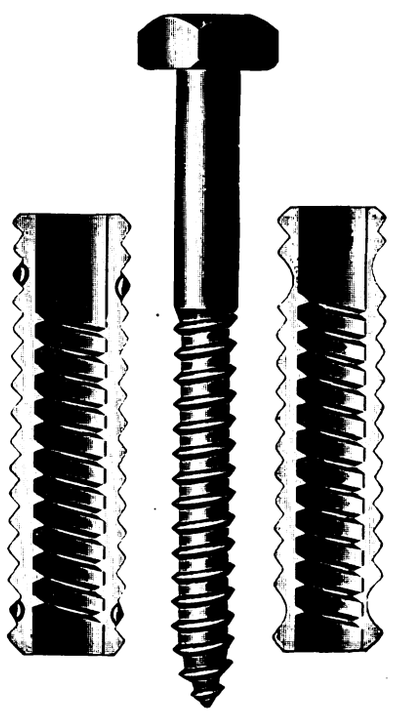
Validity of Prior Will.

QUESTION: In 1885 my brother made a will by which he left me considerable property. Lately he married and shortly after this he made another will by which he revoked the will made in 1885 and disposed of his property in a somewhat different manner. A year go his wife died and he took the will he had last made and destroyed it. My brother has recently died, and the only will found is the one made in 1885. Does this will stand or not?

REPLY: Whether the will made in 1885 is valid depends upon certain facts which are not before us. If a will is made revoking a will already in existence and is then destroyed, the former will is not thereby revived unless it appears by the terms of such revocation that it was the intention of the testator to revive his first will, or unless after such destruction or cancellation of the second will the testator duly republishes his first or prior will. If, therefore, this intent cannot be shown or it cannot be shown that the prior will was re-executed, your brother died intestate, and his property would be distributed according to the statutes of descent and distribution. We would strongly advise you to consult a lawyer personally and to lay all the facts before him.

An Agent's Responsibility.

QUESTION: Some time ago I consigned a quantity of goods to the care of my agent preparatory to his filling several large orders. I heard, a few days ago, that all the goods had been destroyed by fire while in my agents charge. Can I hold him responsible for the loss?



REPLY: We are of the opinion that you cannot hold your agent responsible for the destruction of goods by fire unless you had a distinct agreement with him to the effect that he would be responsible for the goods in this way. If, however, you could show that your agent was negligent and careless in the way in which he cared for the goods, and that the fire occurred as the direct result of such carelessness, you would have a cause of action against him to recover the damages which you sustained by reason of the loss of such goods.

Employer's Liability—Defective Appliances.

The Supreme Court of Minnesota held, in the recent case of Anderson, Administrator, vs. Fielding et al., that a negligent act will not be excused by the fact that it is customary; that proof of custom is evidence but not conclusive as to whether the act is negligent, and that this rule applies to the act of the master in selecting and furnishing tools and appliances for the use of his servant. In the case before the court it was held that a servant was not chargeabe with the assumption of the risk or with contributory negligence as a matter of law by continuing to use for a reasonable time a machine or appliance which he knew to be unsafe, where he had complained of it to the master and the master had promised to remedy the defect, unless the appreciated danger of using it was so imminent that a man of ordinary prudence would refuse longer to use it unless it was made safe; that what was a resonable time in such a case was a question of fact, and that the questions whether the defendants were negligent in furnishing the plaintiff unsafe appliances for his use in doing the work assigned to him, and whether he was guilty of contributory negligence in using them, were made by the evidence in the case questions of fact for the jury. The court further held that expert testimony was admissible as to whether a block and hook constituting a part of a painter's apparatus for supporting himself on high structures was reasonably safe.

DIAMOND EXPANSION SHIELDS IMPROVED.

With the recent adoption by manufacturers of G. P. lag screws, of standard threads to fit the Diamond Expansion Shield, there has also been made an important improvement in the shield itself. The threads in the shield are now omitted for a space of about three-quarters of an inch, thus allowing the unthreaded portion of any standard make of lag screw to enter the shield. In

DIAMOND EXPANSION SHIELDS IMPROVED.

the past it has been necessary to use special lag screws threaded the full length of the shield. The United States Government Engineer Corps sometime ago adopted a Standard Bronze Diamond Expansion Bolt and have recently placed several large orders with the manufacturers through local dealers, for use in connection with electric wiring on Government fortifications. The Diamond Expansion Shield illustrated herewith is manufactured by the Diamond Expansion Bolt Co., of 9 Murray Street, New York.

RECENT TRADE PUBLICATIONS.

THE PENINSULAR STOVE COMPANY, 162-4 West Van Buren Street, Chicago, Ill., are the authors of an extremely high-grade pamphlet catalogue which has an attractive cover bearing the picture of a full fledged porcupine over which is printed in red letters "Points That Will Stick." Inside they illustrate and describe their "Granite Peninsular," "Household Peninsular," "National Peninsular" and their "Crown Peninsular." They call especial attention to the superb quality of their nickel work. They claim that for brilliancy and long lasting qualities it is absolutely unrivaled, which they state is the result of a secret process known only to themselves. Their nickeling department, they claim, is larger and more complete than that of any other stove manufacturer in the world, their vats having a capacity of over 7,000 gallons of nickeling solution, which in part enables them to obtain such satisfactory results. They claim for their Peninsular Ranges a combination of finish, symmetry and strength, which they justly deserve. They invite inspection of their salesroom and warehouse at the address given above. They carry a complete stock on hand at all times.

THE RADIUM STOVE COMPANY, 310 Dublin Avenue, Columbus, Ohio, have recently placed in the hands of their patrons a 1904-'05 catalogue of attractive appearance devoted to their Radium Base Heating Gas Stoves which they state are the only ones of their kind on the market up to the present time. They are a radical departure in style from the old shapes of gas heaters variously known as "Triples," "Processes," "Actions," "Ruples," etc., also they claim the most powerful gas heater ever produced. It heats the floor first, just where heat is wanted. Radiator stoves, they argue, heat the ceiling first, just where you do not want the heat. The Radium is built on the same principles as a hard coal base burner, and has a large radiating surface in addition to the circulation, is gas and air tight, unique in style, beautiful in design, has fine castings and mountings, and they state, the catchy details of construction make it a trade winner. Their catalogue is of pamphlet form, is finely gotten up, giving a very good illustration of a gas fuel stove, also a sectional view of the same, with general description, dimensions, prices, etc. The book may be had upon application.

THE UNITED STATES STEEL LOCK COMPANY, Lyons, Iowa, have just sent us a copy of their new catalogue No. 5 and Price List No. 12. Their catalogue is a bound book of 216 pages finely printed on coated paper, and would add materially to any Hardwareman's business library. It is devoted to locks, knobs, escutcheons, store door handles, push and pull plates, sliding door latches, etc., etc., each one finely illustrated and minutely described. In the back of the catalogue sixteen pages are devoted to a ist of sets showing combination of detail as regularly packed. Other combinations can be made by specifying full detail on order. An extended numerical index is given of all goods in this catalogue giving description of detail comprising sets. Their price list No. 12, which accompanies this catalogue, is one which shows the expenditure of much time and labor in compiling, and will be found indispensable for use in connection with catalogue No. 5.

JAMES P. DUNN, Cleveland, Ohio, manufacturer of Bailey's Steel and Iron Portable Hoists, has issued a pamphlet exploiting the merits of the same, and giving eight pages of testimonials, which leave no doubt as to the excellent qualities of Bailey's Hoists. These are made in four sizes, two, four, six and ten-ton. One man can raise full capacity of each hoist and hold load at any point. In lowering, the load lowers itself and can be lowered at any desired speed. The hoist chain is separate from the hoist so that in putting the hoist in position the chain can be put on afterwards. A Bottom Block is sent with every hoist so that double purchase can be used when full capacity of hoist is required. In construction the machine is very simple and can be operated by any one without any previous experience. The company state that, adding cheapness to all its other qualifications, its price is less than that of other hoists of equal power. The pamphlet gives explicit directions for ordering and will be found a help for those interested in hoists.

AMERICAN STEEL & WIRE COMPANY, Chicago, New York, Worcester, Denver and San Francisco, under date of April, 1904, distributed a catalogue exploiting their product in the line of Wire Rope and Fittings. It is an extremely neat catalogue of the highest grade. It includes in the contents hoisting ropes of every description for elevators, mines, etc., towing hawsers, mooring lines, tiller rope and ships' rigging; power transmission rope; street railway, mine haulage and surface haulage cables; dredge and logging ropes, suspension bridge cables, guy strands, sash cord and clothes lines, and flat rope for hoisting purposes, etc. Also they make special rope of any description to order. All of these ropes are made of iron, crucible cast steel, plow steel or galvanized iron or steel according to requirements. They also furnish copper cables and strand for all electrical purposes, and fittings and appliances for use in connection with rope. The above book is a source of exhaustive information on the subject of Wire Rope, how to order, etc.

THE MELROSE SILVER COMPANY, 255-259 High Street, Hartford, Conn., have recently sent out a new catalogue of their Electro Silver Plated Table Ware. The book is finely gotten up and is doubly valuable, being printed in both English and Spanish. They use in the manufacture of their spoons, forks and serving pieces 18 per cent. nickel silver. This metal is white clear through, even when the plating wears off after years of service, there are no black spots nor rust and when well finished is almost as bright and pure as silver. Their claim is that there is none better in well balanced patterns, in quality and finish, their system in the factory, their long experience in this line of work, material and labor, all insuring the customer purchasing the "Melrose" table ware that he is getting honest value. They state they do not turn out cheap work of any kind, but their prices are as low or lower than other firms making the same class of Plated Table Wares. They make a specialty of attractive combinations and put them up in neat cases, that are both useful and beautiful. The above catalogue will be mailed upon application.

JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J., have issued another of their attractive little envelope size booklets; this time on "Slipping Belts," with some observations on leather belting, the causes of its slipping and the conditions which justify the use of a belt dressing, with especial reference to Dixon's Traction Belt Dressing and Leather Preservative. They give on the last page of their booklet the following directions for applying their dressing: "Thoroughly clean your belts with a stiff brush or wooden scraper of all accumulations of dirt and grease. If the dressing is cold and thick, warm it until it is thin; then apply it lightly and evenly with a brush or swab. The cleaner the belts the better the results. Use only a little at a time. One pound of dressing should put in order eighty-one square feet of leather belting." The dressing is sold in 10, 25, 50 and 100 pound pails and in barrels of 375 pounds.

THE LUFKIN RULE COMPANY, Saginaw Mich., have just sent us a copy of their latest catalogue No. 7, accompanied by a fac simile in half size, which is intended for universal distribution. The books are in pamphlet form and contain 64 pages. The covers are a soft gray rough finish, with artistic black lettering, and are devoted to exploiting the tapes and rules which they manufacture. They state regarding their "Reliable" steel measuring tape that the main feature is the new winding attachment by which all the objections against every other flush handle which depends upon a strong finger nail as an agent for opening, are overcome. This arrangement presents a perfectly flush appearance when closed, and the handle is opened by simply pressing a pin on opposite side of case. This pin pushes against the winding knob or handle when closed, and thus lifts cover or handle. Extraordinary care is exercised in preparing and graduating their tapes, and they state none but the finest grade of steel is used. They state they will furnish steel tapes nickel-plated when desired, but they do not recommend it; also all tapes will be furnished with the metric measurements when desired. Send for a copy of the above catalogue.

NEW GOODS AND SPECIALTIES.

A RECENT IMPROVEMENT.

J. Stevens Arms & Tool Co., Chicopee Falls, Mass., have recently improved their No. 17 Favorite Rifle by the addition of

STEVENS' IMPROVED SIGHTS.

special sights illustrations of which we give herewith. From July 1st they are furnishing this Rifle with Rocky Mountain Front and Stevens Folding Leaf rear sights, without making any change in the list or cost price of the rifle.

SCHILL BROTHERS, STEEL RANGES, ETC.

The Schill Brothers Company, Crestline, Ohio, are manufacturing a line of Steel Ranges, Steel Cooks and Heaters that have proved popular and quick selling in every locality where they have obtained a foothold. The illustration below shows "The Schill Oak," for wood and coal, which is made in five sizes, from 12 to 20 inch, and proves to be one of the most taking styles in their line of "The Schill Oaks."

"SCHILL OAK" PARLOR HEATER.

The Schill Oaks are made in five sizes regular, and five distinct styles. On one page of catalogue they show same with base, which style is made in four sizes as shown and can be furnished with plain or nickeled base, as may be desired. Other pages show regular Oak, style of illustration with and without hot blast, and also with double section made in two sizes and with prismatic or triangular rolling grate, made in three sizes, thus presenting a complete line. All Oaks have self-locking door latches, and have screw drafts, enabling one to close all doors and drafts air tight, thus making it the most perfect air-tight construction on the market, and as a fire keeper it has no superior. All Oaks are mounted with No. 16 gauge, patent levered, cold rolled polished sheets.

The line of Schill Brothers Steel Ranges take up a number of pages in their catalogue, showing up to excellent advantage, and containing special and novel features not found in other lines.

The Grate is the regular duplex style, but differs from others in the manner in which it is supported in fire box, grate bars being supported by cross bars at each end, and the grate frame has been dispensed with, insuring longer life to liners, besides no grate frame to burn out, a thing so common in other stoves and ranges.

The reservoir casing is cast iron, the front of which is covered with sheet steel, thus giving it the appearance of a steel front, besides saving labor in blacking. Right end of casing is handsomely ornamented, and bottom of casing has drip cup to take up and absorb all drippings from reservoir, and not allow same to run into bottom of range.

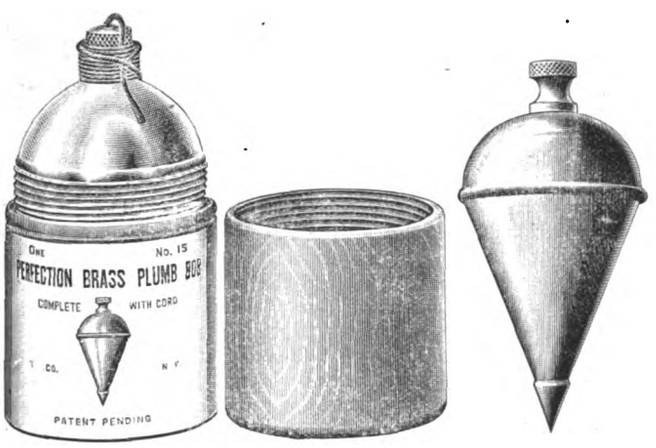
The oven in the Schill Range differs from all others, inasmuch as it is a complete oven, having an end riveted in same, and the body of the range does not form the rear end of the oven. It has two cast iron braces riveted diagonally across bottom to prevent bottom from buckling or warping and is made of 14 gauge cold rolled sheets. Oven is not riveted to body of range, but is put in with stove bolts, and can easily be removed and replaced if necessary by the use of a screw driver. It has balance oven door fitted carefully to cast frame and not to steel body, and is ventilated.

SCHILL STEEL RANGE.

"NEW IDEA."

The body is made of one sheet of 18 gauge cold rolled sheets and is asbestos lined. The top is fastened to body of range by means of malleable lugs securely riveted to body and not bolted through sheet flange. Smoke flue has cast shoe at bottom, has extra bottom riveted in same in addition to flue bottom to prevent scorching floor. Damper can be removed and replaced by removing two stove bolts and without disturbing any parts of range. It has front or pouch feed with draft door below same, which can be opened to light fire. Can furnish same either with or without base; or with copper or enameled reservoir; in the absence of instructions we ship enameled. Also made with extension fire box, which is furnished only when ordered. Also made in polished or blue steel, which are furnished only when so ordered and at additional cost. Black japanned are always shipped unless otherwise ordered. It is very handsomely nickeled and decidedly the latest in stove construction.

The above cut shows the Schill Steel Range with pouch feed and drop door. All ranges shown in their catalogue can be furnished with this style feed door if desired. Same are furnished only when specified in the order. In the absence of instructions swing door is shipped. They can furnish cast iron enameled or copper reservoirs. In the absence of instructions they ship cast iron enameled. If copper reservoirs are wanted, it must be stated in the order.

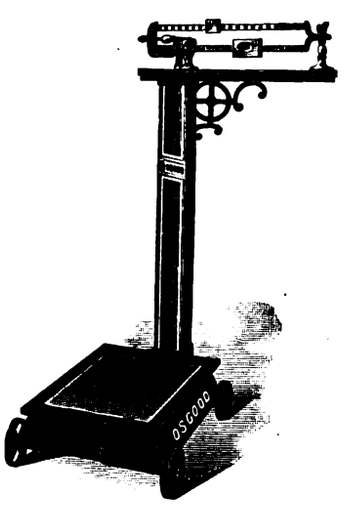


Schill Brothers make also a line of warm air furnaces to the exploiting of which an entire catalogue is devoted. They are made in all sizes from heating dwellings to churches and public buildings. We present herewith a small cut illustrating the "New Idea" Furnace with casing, one of their most popular styles, for a full description of which, and also "The Schill" and "Schill's O. K." our readers are referred to their Furnace Catalogue.

THE PERFECTION PLUMB BOB.

Tower & Lyon Co., 95 Chambers street, New York, are placing upon the market through the Hardware and supply trade, The Pefrection Plumb Bob illustrated in this article, on which a patent is pending. They are made by a new process with a steel spindle that is centered to secure an exact even balance of weight, the suspending line and the hardened point of the stem always settling to a line exactly perpendicular. This novel and unique feature is claimed to possess an actual advantage over anything on the market, and obtained its accuracy for this Plumb Bob by making

Digitized by Google



its walls of unvarying uniformity as to thickness, so that when filled with molten lead the steel pintle forming its center secures its exact balance over a shell formed with an absolute precision that ensures a true perpendicular from the steel point at the base, following up through the line either shorter or longer as may be used. They are finished in brass, highly polished or nickel-plated as preferred, the projecting rim or bead at its greatest circumference with the corresponding enlargement of the stem

below the bulb, form bearing points which serves to protect it from bruising or disfigurement by contact with other bodies or rough surfaces. All the points are hardened. They are put up in a manner especially attractive to the trade, each plumb bob with cord attached is packed in a solid wooden box fitted to its bulk, forming a neat, substantial and permanent receptable. They are made in five sizes, from eight ounces to three and a-half pounds.

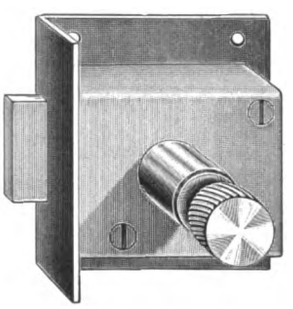
OSGOOD PORTABLE PLATFORM SCALE.

Out of the fine line of scales shown in their latest catalogue of the Osgood Scale Company, Binghamton, N. Y., we give an illustration of a Grocery scale which is certainly up-to-date. With full capacity, brass beam, nickel plated and polished. This scale is considered by the Company one of their finest productions; in many ways the most useful scale they make. It possesses the distinct advantage of having the beam on the top of the cap instead of under it, making it much easier to see and operate. It does away with loose weights of any kind, as the weiging is done on the beam with the sliding poises. The upper bar is marked in half pounds up to 100 pounds; the lower bar is graduated and notched in 100-pound notches to the full capacity of the scale. The beam is delicately sealed and makes the most accurate and

OSGOOD PORTABLE PLATFORM SCALE.

rapid weigher of any scale of its capacity. Every part is made with extreme care by skilled workmen. The pivots and bearings both in the beam and under the platform are made of strong, finely tempered steel. The beams, poises and thumbscrews are all made of highly polished brass. The castings are heavy, and the platforms full size. The axles run through the frame, and the pillar, cap and board are of the best seasoned hard wood. The company manufacture of regular portable scales, all the popular sizes and capacities and all principal modifications, including drop lever, bag rack, double beam, iron platforms, etc., all of which are fully described in their catalogue.

CRONK B. S. PLIER NO. 95.

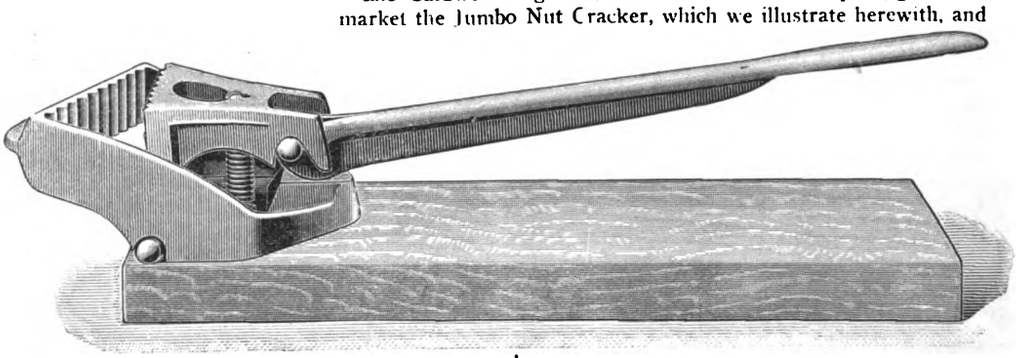


Among the many specialties placed on the market by the Cronk & Carrier Manufacturing Company, Elmira, N. Y., the Cronk's B. S. Plier No. 95 has enjoyed a reputation for quality, utility and general merit second to none. It is made only in one size, 6-inch, and in two finishes, polished and nickel-plated.

CRONK B. S. PLIER NO. 95.

THE "CRAIG" KEYLESS LOCK.

The Miller Lock Company, Frankford, Philadelphia, Pa., are placing on the market the "Craig" Keyless Lock, which is made suitable for drawer or locker. An illustration of half actual size is given herewith. It is made of brass and steel. The lock is



THE "CRAIG" KEYLESS LOCK.

quickly and reliably operated by aid of its "clicks," which may be easily felt when the knob is rotated. A few are to be counted to the left, a few to the right, and again a few to the left; a turn to the right will then open. Among the numerous advantages of the "Craig" Keyless Lock attention is called to the following: It is easy of application; the clicks can be both felt and heard by operator; it is easy and simple in operation; in large series it varies as to the number of clicks required in each movement to open, thus affording an exceptionally high grade of security. The owner can change the combination at pleasure, and will find that this lock affords the highest possible security. Each is packed in a box, with screws and simple directions complete. The novelty and security of this lock will give it a speedy popularity for the purposes it is intended.

THE JUMBO NUT CRACKER.

The Caldwell Mfg. Co., Rochester, N. Y., are placing on the market the Jumbo Nut Cracker, which we illustrate herewith, and

THE "JUMBO" NUT CRACKER.

based as it is on a unique application of the power and strength of the lever principle, it makes an unusually effective article for the purposes designed. Its length of arm permits effectively the cracking of the hardest nut with only a light pressure being necessary. It is done so easily, the usual mashing of the meat in other appliances of this character is controlled and avoided. Its great capacity compared with other nut crackers, may be judged, when it is known the jaws extend from ⅜ to 1½ inches. It will prove a salable specialty for fall trade. Write to the manufacturers for circulars, etc.

Digitized by Google

THE SITUATION IN THE SOUTH.

An Interesting Review of Conditions and Prospects.

NEW ORLEANS, July 21 (Special Correspondence).—Just now the local Hardware trade is wondering which way the current of business will run when the new crop season opens in September. At present all agree that the present season is disappointingly less remunerative than that of 1903. The conditions which have contributed to this are easily understood, but this does not lessen the chagrin with which the situation is greeted by all. Coming as it does after a Winter and Spring which surpassed all expectations, several of the houses have been compelled to reduce forces, and to otherwise temporarily curtail expenses. However, the situation is regarded as being merely temporary, for all crop reports are good, and the country tributary to New Orleans has every prospect of being actually as prosperous now as at any time in the last three years; just as capable of purchasing, and just as likely to purchase when the moving crops release tied-up capital.

Three elements have contributed to the comparative stagnation. First, the clogging of the lumber business, due to the greatly decreased demand for lumber during the past two months, has caused nearly all the mills in the lumber belt of Louisiana and Mississippi to run on reduced time, and even necessitated the stopping of a considerable number in the Mississippi Gulf section. Second, labor troubles in the building trades began in New Orleans early in the Spring, spread to many of the smaller towns and cities in a radius of two hundred miles and dealt a staggering blow to what promised to be the very best season in years for all manner of Building and Household Hardware. However, the third and most important cause of the temporary stagnation in Hardware lines would seem to be the completeness with which the cotton belt supplied its needs last Winter and Spring—when cotton was soaring near fifteen cents and every planter's pockets were crammed with ready money.

Prices having eased off through the past two months seems not to have applied any effective stimulant to the condition of affairs; and while this easing off has affected chiefly the basic goods, the philosophy of the situation is applicable to other lines as well. All these circumstances which have combined to make the Summer trade less than was expected are regarded as merely temporary. The lumber and timber trade is expected to brighten in domestic lines when the labor troubles are settled and the election is over. The settling of the labor troubles will start building, and building will start the saw mills. Thus mill supplies, Household Hardware, and heavy building material will be in demand once more.

OUTLOOK FOR NEW TRADE.

Above all, however, the freeing of the capital now locked up in the cotton fields, the cane fields, and the rice swamps will set to moving all the wheels of business. Last Winter and this Summer the cane planters were very circumspect in their buying. Last Winter they couldn't buy. This Summer they have been afraid to buy, dreading a repetition of the past. Last Winter and Spring the cotton planters surfeited all their needs and desires This Summer there has been nothing left for them to purchase. Last Winter the rice planters were wondering what to do with their surplus crop, and this Summer they have been very cautious. Now from all the section tributary to New Orleans the best tales are told. The cane belt is said to have the finest crop in prospect that has come to the section in two decades. Already the planters are beginning to furbish up their refineries and sugar houses. Already they are coming to town to interview their bankers and commission merchants on the "outlook." All this means a Fall demand for all manner of Farm Hardware: for the sugar planters have done little buying for two seasons and many of them will, if conditions permit, purchase complete new outfits. It means more mill supplies for the sugar houses—packing, belts, waste, piping, bolts, nuts, and the thousand and one odds and ends and incidentals which keep a large plant going. It means new cars on the plantation field railroads, repaired engines on the roads; it means new cane-carts, new wagons, new harness, trace chains, buik leather for repairs, etc.; it means new corn shredders, new baling machines, new farming implements of all kinds.

A conservative estimate is that the crop of cane as it now stands is fully thirty per cent. and more, probably forty per cent., better than it was at the same time last year. As last year's crop depreciated considerably in July and August in 1903 the present crop, if it maintains its present standing to the end of the season, will mean almost a half more gross revenue to the planters than was gained last season. It means a three hundred thousand-ton crop as against one that barely passed two hundred thousand tons. The effect of this on the purchasing power of the cane belt is readily perceived.

In the cotton belt the outlook, roughly speaking, is for a crop considerably larger than that of the year just gone, perhaps eleven per cent. greater, but prices are ranging steady and at a point sufficiently high to justify the belief that the purchasing power of the cotton region will be fully as great as it was last year. With this true, the trade for the cotton belt will be almost as good as it was last season, if not better, so far as volume is concerned; and will probably be in a class of goods more profitable to the trade. Last season the cotton planters supplied the piled-up wants and desires of two seasons. Many of the purchases were of materials that usually last several seasons, heavy articles on which the prices run closer to the cost. During the coming season, the trade will probably call for higher priced articles, better finished goods, the luxuries of the Hardware business rather than the necessities. Last season the cotton planters bought farm wagons. This year they will buy road wagons, buggies, and pleasure vehicles. Last season he bought nails and barbed wire. This year he will buy ornamental iron fences and woven wire. Last year he bought new hinges for his door; this year bronze door knobs will be in demand for the planter's country house. Last year he bought a new bath tub; this year he will buy a coal-oil heater for his bath room. However, there is one phase of the cotton belt situation which bears roughly on the implement men. The hay crop is very scant; and the corn crop was more neglected than was supposed early in the season. This means that the customary trade in feed-stuff handling implements will be very short during the coming Fall and last Summer. Last season a great many baling presses, rickers, forks, etc., were purchased, with an immense quantity of shredders, and similar implements. It would seem that there will be hardly any demand for these articles from the cotton belt until more than a year hence. The implement men are looking only for the regulation Autumn orders of heavy plows and woodland implements. However, a good demand for mill supplies for the ginneries is expected; while the cotton seed oil mills are preparing for heavy Autumn runs.

The rice belt is on the eve of a tremendous crop; but conditions in that section, scattered along the Gulf coast from New Orleans almost to Galveston, are such that there is considerable hesitation among the Hardwaremen about venturing heavy risks just now. It is believed that the rice planters will have a crop they cannot dispose of to any very great advantage, for lack of an adequate demand. However, several agencies are working to overcome this condition of affairs. The American Rice Distributing Company is working overtime to create a foreign demand in the West Indies, while other agencies are striving to build up a permanent trade in the Middle West. However, the rice farmers and the suppliers of the section are watching one another warily, and one would seem as chary of buying as the other is of selling.

CITY DEMAND.

Such is the outlook for the country. In New Orleans the prospect is decidedly mixed. The building troubles are yet unsettled; and the season is too nearly over for any great demand in Building Hardware to arise. The trades unions have killed the demand until next Spring. Household Hardware is at its very dullest just now; and with the few residences built during the Summer, the outlook is for a restricted demand during the Autumn. However, the refitting of old houses, the renovation of residences by persons who have been away during the Summer, promises well.

Heavy contracts in sewerage and drainage work, all containing clauses compelling the favoring of local sellers wherever possible for all material, have created a considerable and what will be a permanent demand for cement and heavy building material during the next five or six years. During the Summer great quantities of cement, lime and kindred material has been disposed of. Some large contracts, approximating $2,000,000, will be let for steel sheds, new wharves, piers, etc., along the river front. This will come from the proceeds of a $2,000,000 bond issue authorized to be made by the Dock Commission of the port of New Orleans. The contracts will all contain, so it is said, clauses specifying the favoring of local houses for supplies. This demand will not begin to be felt for six months at the earliest.

TRANSPORTATION DEVELOPMENTS.

During the Summer work has progressed steadily on the two new trunk lines, which will be running trains into New Orleans before the opening of the next Spring. The various new steamship connections which were made last Spring have been doing good business until the last month, when all lines have slackened. The New Orleans Hardware trade has taken particular pains to spread its lines along the Texas coast to Brownsville and into Northern Mexico by the new steamship company entering there.

Particular attention is being given in a number of trade circles among them none more interested than that of Hardware, in the work to launch the Mississippi and Orient Steamship Company, which has the backing of the Panama Canal Commercial League, and the New Orleans Board of Trade. Pearl Wight and Col. T. J. Woodward, of Woodward, Wight & Co., are both deeply interested; while James W. Porch, of Lukens Iron Works, New Orleans branch, is at the head of the enterprise.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washin ton, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED JULY 5, 1904.

365,802. BROOM HANGER. Rion D. Dow, Hartford, Conn.
365,809. FURNITURE CASTER. Ephraim Hambujer, Detroit, Mich.
365,823. CARPET STRETCHER AND TACK DRIVER AND EXTRACTOR. George F. Kolb, Phila., Pa.
365,834. DINNER PAIL. Franklin Maranville, Clinton, Ohio.
365,871. FASTENING FOR HINGED AND SLIDING DOORS. George G. Smith, St. Albans, Vt.
366,020. LANTERN. John W. Orphy, Rochester, N. Y.
366,098. FRAME FOR WIRE MATS. Christian C. Hill, Chicago, Ill.
366,099. SHOVEL. Jeremiah Hinchman, Seneca Falls, N. Y.

PATENTS ISSUED JULY 5, 1904.

763,980. SASH LOCK AND STRIKER. Robert B. Hugunin, New Haven, Conn.
764,026. HINGE FOR DOUBLE SWING DOORS. H. J. Wright, New York, N. Y.
764,050. CARPET SWEEPER. Lewis H. Halladay, Marion, Ind.
764,084. MONKEY WRENCH. C. L. Verac, New York, N. Y.
764,085. ANIMAL TRAP. William Walton, Atlantic City, N. J.
764,111. LAMP SUPPORTING BRACKET. Frederick Clarke, Clearlake, Minn.
764,171. ANGLING DEVICE. A. F. Bingenheimer, Milwaukee, Wis.
764,232. BATH-TUB SEAT. J. P. Eustis, Newtonville, Mass.
764,233. SIGNAL FOR LETTER DROPS. M. S. Field, Boston, Mass.
764,305. SASH HOLDER. J. L. River, San Francisco, Cal.
764,398. FISHING ROD. Geo. W. Upton, Warren, Ohio.

PATENTS EXPIRED JULY 12, 1904.

366,205. COMBINED SCREW DRIVER AND BRAD AWL. Wm. Cronk, Havana, N. Y.
366,230. CAN FAUCET. John Marshall, Brooklyn, N. Y.
366,380. CAN OR POT FOR MEASURING MILK, ETC. J. Cuthbertson, Lowell, Mass.
366,439. REVERSIBLE SCREW DRIVER. Theodore Troy, Three Rivers, Mich.
366,508. TOOL HOLDER. A. Rippien, Reading, Pa.

PATENTS ISSUED JULY 12, 1904.

764,574. SAFETY RAZOR. Henry J. Gaisman, New York, N. Y.
764,577. AX HEAD WITH REMOVABLE BIT. L. L. Gilks, Patten, Me.
764,590. CURTAIN FIXTURE. Charles L. Hopkins, Chicago, Ill.
764,785. SHEET METAL HINGE. C. S. Van Wagoner, Cleveland, Ohio.
765,155. CAN OPENER. H. W. Thurlow, San Francisco, Cal.

PATENTS EXPIRED JULY 19, 1904.

366,670. SAD IRON. R. F. Klopp, Mason, Mich.
366,678. COOKING OR HEATING ATTACHMENT FOR STEAM OR HOT WATER RADIATORS. A. W. Newell, Bradford, Pa.
366,711. DOOR SPRING AND CHECK. J. Bardsley, Brooklyn, N. Y.
366,723. SASH HOLDER. J. H. Haughawout and Wm. S. Hogoboom, Fairmont, Neb.
366,792. LIFTING JACK. F. Quint, Willows, Cal.
366,826. BIT BRACE G. Gavin and L. W. Cromer, Eureka, Nev.

PATENTS ISSUED JULY 19, 1904.

765,172. SASH LOCK AND LIFT. Ozia A. Essix, Canton, Ohio.
765,213. MEMORANDUM ATTACHMENT FOR TELEPHONES. Robert W. Thompson, Minneapolis, Minn.
765,249. HOSE COUPLING. S. J. McDonald, Detour, Mich.
765,271. SASH HANGER. N. H. Campbell, Binghampton, N. Y.
765,285. POCKET KNIFE. E. Kaufmann, Solingen, Germany.
765,288. STEP LADDER. W. C. King, Weimar, Cal.
765,289. HASP LOCK. A. T. Kingsley, Wallingford, Conn.
765,302. SCREW DRIVER. George E. Wood, Southington, Conn.
765,372. COMBINED SPRING AND LOCK HINGE. W. F. Bading, Grand Haven, Mich.
765,450. CAN OPENER. F. White and F. Winkler, Newark, N. J.
765,482. ARTIFICIAL FISHING BAIT. W. A. Hardy, Monticello, Ind.
765,543. EGG TESTER. A. Blum and E. D. Mann, Savannah, Ga.

The ministry of public works in Cairo, Egypt, will purchase a large quantity of telegraph materials to be delivered at Suakim from October 1 to December 1 next. Among the supplies required are 220 miles length of insulated wire, 6,000 usulators, wooden telegraph poles, etc.

PRACTICAL HINTS ON ADVERTISING.

BY

CHARLES AUSTIN BATES.

The best advertisement is the one which says what there is to say in a clear, concise, simple manner and then stops. Brief, chatty descriptions of goods are always effective, but in trying to write at people from their own level don't make the mistake of becoming commonplace.

Individualities and not generalities are the things to advertise. There are a number of features in the business of every man which makes it totally different from that of any other man. These are the points to be emphasized.

Always remember that newspaper space represents more or less cash, and in most cases, the percentage of profit realized on the investment is dependent on the matter that goes into the space.

A three-inch or a six-inch single or double column ad in every issue of one or two daily papers in a medium-sized city does not involve a very great expenditure in proportion to the amount of business that should be done, but, at the same time, the ads must be written with the idea of getting the greatest possible benefit from the space. By all means, cultivate a terse, epigrammatic style if you can, but don't sacrifice intelligibility to brevity. Endeavor to infuse what might be called a personal tone; write your ads precisely as you would talk.

Don't misunderstand me. When a good idea suggests itself to you don't spread it out unnecessarily to the extent of three or four paragraphs, but on the other hand, don't boil it down to such an extent that when it appears in cold type, it will be jerky and in a measure disconnected. Make your advertisement timely. Before you begin to write, decide what it is people want most at that particular time and make that the principal thing in the ad.

As a rule, every ad should quote a price or prices, but prices mean nothing unless the goods are fully described. Hundreds of advertisers make the mistake of never quoting prices, while others go to the other extreme and eliminate the descriptions entirely, so that there is no room for anything but prices. More space should be devoted to the descriptions of the goods than the prices. There is no object in telling people that you can sell a given article at a certain price unless you give a fairly accurate idea of what that article is and why it is desirable. Don't have very much to say before you commence talking about what you have to sell. A catchy headline and a few lines of general matter by way of introduction are enough.

Speaking of headlines, have you ever noticed the delightful ambiguity of the average newspaper heading? Instead of making the headline an index to the ad, the average advertisers feature a few words that are admirably adapted to conceal the true object of the ad. Newspaper men long ago recognized the value of headlines that told something and so to-day by simply glancing over the front page of the newspaper, we can glean practically all the day's news by a perusal of the headings. Why shouldn't the advertiser adopt the same method?

In the first place, you must remember that if you want your ad to be read, your headline must be prominent enough to attract attention, and in order to achieve that prominence, the head must be set in large type. I believe that from one to four words are, as a rule, quite enough for a headline unless the ad happens to be unusually large. If you use from six to ten words in the headline they must be set in very small or very condensed type and thus you lose the display. The best method of preparing a headline is to read your ad over, think of the idea it conveys and then try to express that idea in the most terse manner possible.

Then you will have the ideal headline. The way to test its value is to consider it separately: that is, see if in itself it con-

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.

Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

veys some definite information without regard to the matter to follow. If it fulfills these requirements, it is good.

Above all things, avoid beginning an ad with the words "We

have," "We are" or expressions of a like nature which means absolutely nothing in themselves. If your headline reads $3.00 Shoes at $2.50, it may not be especially unique or original, but it does tell something and if you were to simply print your name beneath, you would probably sell some shoes.

It is the wisdom of the owl and not the base cunning and sheer force of the fox, that makes successful advertising.

The fox disguises himself with smooth, nice sounding words, finds a conspicuous place in the family papers, and trys by his cleverness to persuade honest people to toss their good money at him.

They do it. But when they see that it is another clever trick of the foxy advertiser "his goose is cooked."

Some business men are inclined to think that this sort of advertising is the cleverest and best ever. So it is—as a foxy, cunning, deceptive method of advertising, but not as honest, legitimate advertising that builds good reputations and brings the greatest successes.

The big advertising foxes have their imitators in the little fellows who are trying to secure money from people by foxy cunning.

Better secure a few customers through your advertising and make them steady patrons and living, breathing advertisements

for your store than to secure many temporary customers at the expense of your business reputation.

✤

E. D. Bangs, a former photographer of Milwaukee, has invented a device for keeping household refrigerators cold without the use of ice. He has applied for patents upon the device and when they are granted intends to put it upon the market. Without divulging his secret too much, Mr. Bangs explains that his device is a combination of metals. The inventor says that his device can be attached to the domestic refrigerators commonly in use.

REVIEW OF THE MARKETS.

WIRE NAILS: Demand is light, stocks at the mills large and prices are reported as usual during such times, somewhat irregular, however no changes have been made in regular quotations, which are as follows: F.o.b. Pittsburgh sixty days, or two per cent discount for cash in ten days.

Jobbers, carload lots.....$1.90
Retailers, carload lots 1.95
Retailers, less than carload lots 2.05

New York. The usual midsummer volume of trade. Quotations: Single carloads, $2.10. Small lots from store $2.20.

CUT NAILS: It is reported that the larger stocks and a consequent desire to prevent further accumulation, has resulted in a shading, in some instances, of from 5 to 10 cents from the regular quotations.

Jobbers' carload lots .....$1.75 base
Jobbers' less than carload lots..... 1.80
Retailers' less than carload lots..... 1.90

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms 60 days, less 2 per cent. off in 10 days.

New York. The following prices prevail:

Carloads on dock $1.89½
Less than carloads on dock 1.97½
Small lots from store 2.05

CORDAGE: The prospect of better business in the Fall and the continuance of the present moderate demand until that time is the belief of manufacturers at present. Quotations on the basis of 7-16-inch diameter and larger are about as follows: Pure Manila, 11½ cents per pound; other grades of Manila, 10¼ to 11 cents, according to quality; pure Sisal, 9 cents; mixed Sisal, 7½ cents.

LINSEED OIL: An advance of 2 cents per gallon in the price of raw oil went into effect on the 15th. Demand is light and confined mainly to small lots. Quotations are as follows: City Raw, in lots of five barrels or more, 44 cents per gallon; in lots of less than five barrels, 45 cents per gallon; State and Western Raw, 42 to 43 cents per gallon. Boiler Oil, the usual 2 cents per gallon over Raw.

BARB WIRE: The amount of new business is small, and the following are the general quotations f.o.b Pittsburgh, sixty days or 2 per cent. discount for cash in ten days.

	Painted.	Galv.
Jobbers, carload lots	$2.20	$2.50
Retailers, carload lots	2.25	2.55
Retailers, less than carload lots	2.35	2.65

SMOOTH FENCE WIRE: Irregular quotations caused by lack of new business reported. Official quotations remain as follows f.o.b. Pittsburgh, terms, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads $1.80
Retailers, carloads 1.85
Less than carloads 1.95

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

CLEVELAND LETTER.

OUTLOOK FOR FALL TRADE IMPROVING.

If the expense of handling staple goods was added to the cost price it would be an element of safety. Selling staple goods below the cost of handling and adding the difference to the price of other goods, creates the opportunity for catalogue houses who do not handle the goods sold without profit, and can, therefore, sell other goods at a less margin.

The merchant who keeps only the goods regularly called for is not a good merchant. He should create a demand for desirable articles by showing them.

Constant improvement is furnishing new and useful articles that somebody will sell.

No merchant can afford to let his customer learn of improvements in the line he sells, and compel him to go elsewhere to get them, and if he is alive all over, he will not. Some merchants put too much emphasis on price and too little on quality. They overlook the great change that has taken place in the ability to pay for the best and compel their customers to go to the city, or order from abroad to get what they want. To keep goods above the quality that is called for is wiser than below, as that will hold the best trade. To keep some of the very highest grade and sell them at a moderate profit is the best possible advertisement. When the writer was keeping a country dry goods store, his habit was to buy a few paterns of the latest, toniest, dress goods and sell them at prices that would keep the ladies talking the whole season on the comparison of his prices, with those they paid in the city for the same goods. Brain mixed with muscle helps trade. We are invoicing in July and we like it, as the days are longer, lighter and warmer than in January. Invoicing and the St. Louis Fair will affect our trade for the first half of July, but with the prospect of fair crops and return to sanity by the Democratic party, the outlook for fall trade is improving. Nothing in American politics has been so discreditable as the defacement of the Democratic party by popularism. The Old Guard who valued the party for its use to the country felt disgusted and disgraced by the attempt to use the country for the good of party. With two sane patriotic parties the defeat of either would not create disaster to business, and it would be a wholesome restraint against irrational legislation, but the change is so radical, it will mystify those who believed in the last Democratic platform.

TROUBLE WITH BINDER TWINE.

Poor quality of binder twine is making endless trouble. To the consumer; those who sell it, and to the manufacturer. Postal card quotations have been sent out, at prices a little above the price of the hemp, which should be used in making it, and a good many merchants who emphasize price, have purchased it and when their customers began to use it, their troubles commenced. Delay in the harvest field; waiting to secure twine that would do the work, is expensive. Returning the twine and refusing to pay for it does not cover the loss. Cheap twine will be at a discount in many places and those who make it or sell it must either reform or go out of business. Barnum said, "People like to be humbugged," but if he had heard the talk in the wheat fields this season when everything waited to exchange twine, he would have learned that the merchant who bases his business on that maxim is out of date. The goods made by manufacturers who always make good goods, are increasingly wanted, as the ability to pay for them has improved.

The Lockwood-Taylor Hardware Co.

BETTER PROSPECTS IN PITTSBURGH.

Business seems to be picking up a little with prospects for greater activity in the Fall. The Carnegie mills at Homestead recently resumed operations in full, working double turn. This will directly affect over 7,000 workmen, giving them steady and profitable employment. The whole town celebrated the event with fireworks and music. It is also reported that the Penna. Railroad is rushed with work owing to a large number of men having been laid off some weeks ago and that they will increase their working force in the near future. Excessively hot weather for the past few days and the absence of many people on vacations tend to retard business, but on the whole things are moving along in a very satisfactory manner.

The West Virginia trade excursion of the Merchants' and Manufacturers' Association was a grand success and stirred up much enthusiasm. It is evident that the retailers of that section look upon Pittsburgh as their natural source of supply and only discrimination in freight rates and poor train service has prevented this city from securing a much larger trade from this district. These matters are now being vigorously taken up both by the Merchants' and Manufacturers' Association and by the trade in West Virginia. It is hoped and expected that changes will be made which will greatly increase the amount of jobbing business coming to Pittsburgh.

Logan-Gregg Hardware Co.

THE ELKS AT CINCINNATI.

"The farmers are all busy, and our traveling men are all in the city attending the Elks convention," said Mr. Berger, of the Kruse Hardware Company, "and between the two we are not over-crowded with orders." The Cincinnati Gun Club, the largest and most noted gun club in existence, held its third annual tournament at flying targets during the Elks reunion on the 19th, 20th, 21st and 22d, at the club's grounds in St. Bernard's. The meet was international and open to amateurs and professionals alike. The W. F. Robertson Steel and Iron Company has purchased 78 feet on Elm by 200 feet on Commerce Street on which they will begin at once to erect a $10,000 plant.

Thoburn.

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN., U. S. A.
Improved Carpenters' Tools.
SOLD BY ALL HARDWARE DEALERS.

DAVENPORT LETTER.

As a guest of the owners of the good steamer *Eclipse* the writer has just returned from a most enjoyable trip on the upper Mississippi to the Pineries of Wisconsin and desires to state that riding on this boat and being entertained by the Lindsay & Phelps Lumber Co. under the immediate care of Capt. Lancaster, beats peddling Hardware as much as the small boy told his grandmother a circus beat a prayer meeting. It is an uphill proposition to settle down to work again after this delightful trip, and an impossibility to write either intelligently or interestingly on the present conditions of trade. We simply find that the store has been running along smoothly and doing about the same amount of business as was done during the corresponding period of a year ago. It hurts one's pride to know of how little importance any one man is to this or any other position nowadays, but in common honesty we have to admit the fact. This summer so far has been unusually pleasant, farm products abundant and extensive building operations are uninterrupted by any unfavorable conditions. What more can we ask?

Sickels, Preston & Nutting Co.

GOOD JULY BUSINESS IN COLUMBUS.

A short while ago we were crying for warm weather, but for the last few days it has been hot enough to suit any one and the people are singing another tune, or possibly the same tune to different words. It is hard to have things to suit everybody. Most of us are grumblers, any way. The weather now is right for farmers, and the comfort of city folks is a small matter compared to a corn, hay and potato crop. We can stand almost any kind of weather on a full stomach if it hasn't cost too much to fill it. Trade has been excellent for several weeks, but will no doubt ease off a little during August. The outlook for Fall business is good and as both presidential candidates are of the same mind on the most important policy, *i.e.*, sound money, there is no cause for capitalists or manufacturers to be alarmed. The butcher strike is a bad thing to have, but it could not come in a better time. Vegetables are plenty and cheap and we will all be better off without meat this hot weather. It may be tough to go without steak, but as a rule it is tough when you get it. The screen and haying tool business has been a record breaker this year, also lawn mowers. Ordinarily this trade is about over by July 4th, but this year it is going to run close to August. Prices with manufacturers are holding pretty steady, but not so with jobbers—some goods being sold for less than they can be replaced. Three big skyscrapers are being erected on High Street in our city at present. Columbus is doing very well, thank you.

The Smith Bros. Hard,are Co.

IMPROVING IN CHICAGO.

With the people at large, the difference between the National Republican platform and the one lately adopted by the Democratic party in St. Louis is so slight that we feel that politics will cut very little figure as regards mercantile business during the Fall trade. Speculators in Wall Street and throughout the country have evidently come to this decision, because of the way they have lately taken hold of railroad and industrial stocks. Then, too, the general business of the country seems to be improving even through the past couple of weeks of warm July weather. The corn crop of the Northwest from present indications assure us of a fairly good crop of this most important commodity. Money seems to be plenty throughout the West and from the above indications we confidentally believe and expect that the Hardware trade from the first of August for at least 60 or 90 days is going to show a very decided improvement over the business of the Spring months. Prices seem to be fairly well held and with some commodities prices will compare very favorably with the low prices of four or five years ago. Our traveling salesmen have done unusually well during June and the first half of July, and our mail order trade is better than usual at this season of the year.

Wells & Nellegar Co.

CROP CONDITIONS IN THE NORTHWEST.

Due to excessive rain, cloudy and rather cool weather, our crop prospects are not what they would be, did we have the proper kind of weather. It has rained almost every day, making it impossible to cut and cure hay. The cool weather has prevented corn from growing, so the only thing that looks right is wheat, but this even is rather questionable on low ground. We still have time to get a bumper crop if the right kind of weather will arrive and stay for several weeks; otherwise our average will be below the ordinary. We are glad that prices in the Hardware line are holding firm. It means a good deal to all dealers in our line and we favor a holding up on production rather than a reduction in price, as a falling market is a hard one to do business in. We believe that present prices will be maintained during this year.

Hackett, Walther, Gates Hardware Co.

THE SAN FRANCISCO TRADE.

Two exceptionally well attended and enthusiastic California meetings were those of the San Francisco Retail Hardware Dealers' Association, held in this city, and the Pacfic Coast Hardware and Metal Association, held in the famous Hotel Potter in Santa Barbara, an up-to-date hostelrie the trade is very fond of visiting. Both these meetings were annual election rallies, each resulting harmoniously in the following selection of officials: San Francisco Retailers' Association—President, M. M. Brown; vice-president, Geo. M. Hickman; treasurer, J. L. Lawless; secretary, Johnson Reynolds. Executive Committee—M. M. Brown, Geo. M. Hickman, H. C. Bennett, C. H. Philpott, F. W. Wright and C. J. Dean. Pacific Coast Wholesalers' Association—President, Joseph Sloss; first vice-president, L. C. Scheller; second vice-president, T. L. Enwright; treasurer, Ralph W. Kinney; secretary, Hamilton W. Barnard (fourth term). Executive Committee—Wakefield Baker, Andrew Carrigan, E. H. Kinney, William Schan, E. W. A. Waterhouse, A. A. Watkins and W. R. Wheeler. Advisory Board—Brace Hayden, H. J. Morton and A. C. Rulofson. Hearty and unanimous feeling is being expressed in the respective trade circles regarding the fortunate presidential election each of the associations has made, a general uplift in wholesale and retail trade relations being predicted as the sure result to follow the highest office promotions respectively of Messrs. Joseph Sloss and Max M. Brown. An ironbound unity of feeling was easily recognizable in the hearty voting of the Coast Association on a resolution in harmony with the National Hardware Association's action discouraging catalogue house patronage; likewise a resolution favoring the Quarles-Cooper bill, enabling the inter-State commission to enforce its decisions, and a resolution against any parcels post legislation, believing such legislation would work great injury by draining from the Pacific Coast hundreds of thousands of dollars that would otherwise be spent here and help upbuild our local communities.

Industrial Press Association.

THE WESTERN MASSACHUSETTS OUTING.

The tenth anniversary of the Western Massachusetts Hardware Association was celebrated by an outing and annual meeting at the Pequot Club, Morris Cove, New Haven, Ct., on Wednesday, July 13.

The day was almost entirely devoted to the enjoyment of sports of the seaside, and an excellent dinner, little business being transacted beyond the election of officers.

Alderman & Carlisle, of Springfield were elected members. They have recently purchased the business of C. J. Blackstone, who was elected an honorary member.

The following officers were elected:

President, C. N. Bacon, the B. L. Bragg Company, Springfield.

Vice-President, F. E. Stacy, the E. S. Stacy Machine Company, Springfield.

Secretary and Treasurer, O. H. Dickinson, the B. L. Bragg Company, Springfield.

Executive Committee: These officers, and C. A. Foster, C. A. Foster & Bros., Northampton; Fred Shepard, James H. Bryan Company, Westfield; C. W. Rackliffe, Holyoke, and M. J. Hall, the Highland Hardware Company, Springfield.

CONNECTICUT STATE CONVENTION.

The annual outing of the Connecticut State Association of Retail Hardware Dealers was held July 13th at Momauguin, New Haven, East Shore. The meeting was called to order by President W. A. Church, and after the reading of the minutes of the annual meeting, ex-President A. H. Abbe, of New Britain, made his report as the association's delegate to the National Association's Convention, referring in a manner full of enthusiasm to the work accomplished.

The resignation of Secretary Charles L. Way was announced, Mr. Way having severed his connection with the Hardware trade. A nominating committee brought in the name of James De F. Phelps, of Windsor Locks, Conn., who was unanimously elected to fill the position.

The report of a committee appointed to consider the advisability of establishing a Hardware Mutual Insurance Company in Connecticut was read by Eli C. Birdsley, of Meriden. The report was in part as follows:

"Your committee unanimously agree that the so-called 'Board Rates,' which we are all now paying, are excessive and in some locations have been recently increased, and that there is no reason why the retail Hardware dealers of Connecticut should assist to pay the large salaries of the officers of the old companies or contribute to the losses by the payment of excessive premiums to these companies, occasioned by the large conflagrations in various portions of the country during the last year. Your committee also agree that while some time in the future it may be advisable to organize a company on these lines among the members of this association, that there are many good and substantial reasons why such a company should not be organized at present."

After partaking of an excellent dinner the Association was again called to order by President Church, who expressed his keen disappointment that there were not present a large representation of the Builders' Hardware manufacturers of New England who had been especially invited to this meeting. Only one firm was represented, the American Screw Co., represented by Wm. G. Smythe.

Short addresses were made by Ex-President Abbe, Chas. G. Agard, Eli C. Birdsley, John Nelson, F. T. Blish and I. C. Treat, discussion being mainly on the relation between manufacturers, jobbers and retailers.

AS DID THEIR FATHERS.

Some men do things in a certain manner because their fathers did so before them and were successful. They cannot realize that the wonderful of to-day become the ridiculous of to-morrow. The man who is content to follow where others lead, who lets somebody else do his thinking for him—never counts for progress in business. Nearly every man you meet thinks that if he was in some other line of trade his success would be greater. The other man's job always looks easier. The field for ingenuity and originality is as great in one line of business as in another. Doing "something different" is the keynote to business advancement. Among competitors, unreasoning jealousy of one another's success is the cause of many unwise proceedings, price cutting and losses. Competition is the great bugbear that frightens the wits out of one half the people who conduct business. The other half care very little about it—manage things in the right way—and make money. Cultivate pleasant trade relations with trade opponents. It makes business strife more endurable and will save you many dollars.

PROGRAMME OF MICHIGAN ASSOCIATION.

At the Hotel Pantlind, Grand Rapids, Mich., Aug. 10-11, will be carried out the following programme, the occasion being the tenth annual convention of the Michigan Retail Hardware Dealers' Association:

Wednesday Morning, August 10, 1904.
Eleven O'clock Sharp.
OPEN SESSION.

Meeting called to order by President—John Popp, Saginaw.
Appointment of Committees on Credentials, Constitution and By-Laws. Question Box and Nominations.
Reading of Minutes.
Reception of Communications.
Payment of Dues and Receiving of New Members.

Wednesday Afternoon.
Two O'Clock Sharp.
OPEN SESSION.

Address of Welcome—Hon. Edwin F. Sweet, Mayor of Grand Rapids.
Report of Committee on Credentials.
Annual Address of the President.
Annual Report of the Treasurer.
Annual Report of the Secretary.
Address—"The Retail Merchant as an Educator." J. H. Whitney, Merrill.
Voluntary Remarks by Members.
Address—"Our Social Relations."—C. L. Glasgow, Nashville.
Remarks by Delegates, suggested by the above.
Paper—"Some Points Which Contribute to the Successful Retailing of Hardware."—E. S. Roe, Buchanan.
Discussion of same.

Thursday Morning, August 11, 1904.
Nine O'Clock Sharp.
OPEN SESSION.

Paper—"Capital and Credit, It's Use and Abuse in Our Daily Business."—A. K. Edwards, Kalamazoo.
Remarks by members on above subject.
Paper—"Collections."—J. H. Murray, Cadillac.
Experiences of Delegates in Collecting Accounts.
Address—"The Catalogue House Problem."—W. P. Bogardus, Pres. N. R. H. D. A.
Discussion of same.
Address—"Salesmanship as a Science."—A. F. Sheldon, New York.

Thursday Afternoon.
Two O'Clock Sharp.
(CLOSED SESSION FOR RETAIL HARDWARE DEALERS ONLY).

Reports of Committees on Resolutions and Constitution and By-Laws.
Consideration of Committee Reports.
Unfinished Business.
New Business.
Miscellaneous Business.
Opening of the Question Box.
Election of Officers and Selection of next place of meeting.
Short Talks from Everybody.
Adjournment.

The officers of the Michigan Association are as follows: President, John Popp, Saginaw; vice-president, Frank M. Brockett, Battle Creek; secretary, A. J. Scott, Marine City; treasurer, Henry C. Weber, Detroit.

The Executive Committee have decided to accept members from now until December 31st for $2, just half of the annual dues.

OUR BRITISH LETTER.

(By our Special Correspondent).

London, July 15, 1904.

AMERICAN IMPLEMENTS AND MACHINERY AT THE "ROYAL."

The annual show of the Royal Agricultural Society of England was held at Park Royal, London, from the 21st to the 25th ult. The weather was simply perfect, but unfortunately the attendance fell far short of the standard. The entire show was well arranged, and agriculturists were pleased with the facilities given them for inspecting the different prize cattle, horses and sheep, and other exhibits interesting to farmers. A large portion of the agricultural implement and machinery business is carried on by ironmongers and Hardwaremen, who look upon this branch of trade as a staple industry. All the leading British firms were well in evidence, and the Implement Yard was full of engines, thrashing machines, stack lifters, grain elevators, food-preparing machinery and harvesting appliances. It was difficult for the casual visitor to judge of the merits of the respective stands, so many firms have improved their implements and machines during recent years, and brought them to a high state of perfection. Although there are some British manufacturers of harvesting machinery who stand out conspicuously for their excellent appliances, and who have a strong hold among the farming interests, it is allowed on all sides that Canadian and American manufacturers of harvesting machinery find British farmers constant patronisers of their specialties. Indeed, there are many districts in Great Britain where American harvesting machinery holds a premier place. The wonderful energy with which the International Harvester Company has exploited this country speaks well for the commercial enterprise of the manufacturers of the United States, nearly all the divisions of this large company have permanent location in Great Britain, and through their London central depots distribute large quantities of harvesting machinery in all parts of Great Britain and Ireland, as well as in many British colonies. Such British firms as Ransomes, Sims & Jefferies, Ltd., of Ipswich; John Fowler & Co., of Leeds; Blackstone & Co., Ltd., of Stamford; E. R. & F. Turner, Ltd., of Ipswich, and others make traction engines and thrashing machinery for all parts of the world, and their leading lines were well represented at the "Royal." Some British firms have been very successful in the introduction of American machines which they have run side by side with English implements for which they have long been agents. F. C. Southwell & Co., of Southwark Street, London, S. E., run the "Ohio" hay loader with great success, and their "Kid Kangaroo" ploughs and "Cockshutt" cultivators are also well known. Such firms as the Noxon Co., Ltd., the Frost & Wood Co., Ltd., the Walter A. Wood Mowing & Reaping Machine Co. and the Massey-Harris Co., Ltd., had excellent stands of harvesting machinery. Of course, branches of the Harvester Company already referred to, included such popular names as Osborne, Plano. Deering, McCormick and Milwaukee. The dairy section at the recent "Royal" was specially interesting, several new makes of separators being introduced, one of these quite unknown in Great Britain—the Aktiebolaget Pump Separator of Stockholm—were successful in carrying off a silver medal offered by the R. A. S. E. The Richardson Manufacturing Co. are handling the "Worcester-Kemp" manure spreader in this country, and George King, the energetic manager of the firm's business in England, was very much in evidence at the "Royal." He is a typical American, has plenty to say, and understands his business; all throughout the exhibition he was generally able to gather a small crowd round him and obtain an interested audience while he expatiated on the advantages of the "Worcester-Kemp" machine. Markt & Co., of London, showed the "Twentieth Century" manure spreader, which is an American machine; and Duke & Ockenden had a good display of galvanized steel windmills, light, airy and effective. Whatever the show might have been from a business standpoint it possessed many features of interest to implement agents and agriculturists who spent much time in comparing the relative merits of the different stands of implements and machines.

THE LONDON IRONMONGERS' ASSOCIATION RIVER PICNIC.

During the summer months the social side of association work comes prominently to the front; ironmongers are gradually learning that there is something to be gained from friendly talks and excursions in which the real characters of association members are brought out. Controversial discussions and debates on problems proposed, as well as regulations suggested for the betterment of the Hardware trade at large, are not always the best means of promoting the welfare and happiness of the Hardwareman. The softening influences of river picnics, and long drives amidst pleasant surroundings, tend to promote good will, and enable members when they again meet for business to understand one another better. They prevent the imputation of wrong motives, dispel suspicion and elevate the standpoint from which others are viewed.

The members of the London Ironmongers' Association recently passed a glorious day upon Old Father Thames, and with the exception of short breaks for refreshment and sundry tours of inspection, spent the whole of the time upon a large steam launch, beginning the day at Reading and journeying to Windsor. The last few minutes of the sail were passed under the walls of the Castle of England's Sovereign, the members of the association loyally joining in singing the National Anthem. Your correspondent was present, thus indirectly HARDWARE was represented. One of the events of the day was a call at the river residence of W. B. Fordham, founder of the well-known firm of factors (Fordham & Sons, Ltd.), through whose hands so many American goods find their way into the shops of British ironmongers. Councillor Timpson, the president of the London association, and a goodly number of ironmongers and ladies were present, and among the guests were W. J. Bacon, J. P., the president of the I. F. A.; Councillor Theedam, of Dudley, and others. Only one firm of manufacturers was represented among the guests, and that was the American firm of carpet sweeper manufacturers (the Bissell Carpet Sweeper Company), whose popular British manager, James Pollitt, was resplendent in yachting costume. The limits of my letter prevent me from enlarging further, but I may say in conclusion that these social events are becoming more numerous, and English Hardware associations in all parts of the country have had, or intend celebrating, one of these summer excursions this year.

A LARGE ORDER FOR AMERICAN HARDWARE.

The extension which has recently been carried out at the Savoy Hotel, Strand, London, has completely Americanized that locality. The buildings, which are excellently appointed, have been fitted up with the latest improvements in American locks, builders' ironmongery and other fittings. The bulk of the building operations have been carried out by James Stewart & Co., an American firm. Yale locks have been fixed upon all the doors in the building. Self-locking entrance door latches of American make have been used; these lock themselves when the door is closed, but are so constructed that should the occupant desire, he can, by pressing a button, enable anyone outside to unfasten the door. Suites of rooms are fitted with specially constructed locks of American make; "Cremorne" bolts and casement stays which prevent windows from rattling, have also been used. The elevators throughout the building have been erected by the Otis Elevator Company, and the ventilation has been carried out by the Sturtevant Engineering Co., from which it will be seen that a large portion of the builders' ironmongery employed is of American type and manufacture. Other large buildings are now being put up in different parts of London, and there is a decided preferance in favor of the novel and ingenious contrivances placed on the market by American firms. These goods are beautifully finished and work smoothly and well. British ironmongers, too, find a ready sale for American Hardware, and some of the London and Birmingham factors who handle American specialties speak well of the progress they are making in the sale of American Hardware. Colonial shippers constantly have in view the importance of good packing, neatly-made boxes, yet strong enough to withstand the rough usage of long sea voyages and transit over rough roads when arriving at the port of destination, and therefore frequently recommend American Hardware for the sound packing of which the manufacturers of the United States are so justly celebrated.

HARDWARE AT THE AGRICULTURAL HALL, ISLINGTON.

The popularity of Hardware exhibitions appears to be continually increasing, judging from the interest shown by ironmongers, many of whom have already visited the Ironmongery, Hardware, and Electrical Trades Exhibition which is now being held at the Royal Agricultural Hall, Islington. The Exhibition was opened on the 12th inst., and visitors were agreeably surprised to find the stands ready for inspection. Some wonderfully pleasing exhibits are being made, American tools, domestic novelties and

CONSULAR COMMERCIAL COMMENTS.

WINDMILLS IN SYRIA.

(From United States Consul Ravndal, Beirut, Syria.)

ANCIENT IRRIGATION SYSTEMS.

Will the ancient irrigation systems, existing remains of which stagger even bold and resourceful engineers of to-day, ever be fully restored? It certainly is to be hoped they will. Here one finds ruins of aqueducts led along frightful cliffs, where goats can scarcely keep their feet, and carried for miles across ravines and rivers on lofty arches; over there in the wilderness traces of subterranean canals of astounding length and nicety of construction. Phœnician, Greek, and Roman engineers also knew how to irrigate by reservoirs—*i.e.*, by storing water. Near Homes an artificial lake was created in olden times which still furnishes water for thousands of acres of land below. By digging a number of wells within a half circle, so as to form a fan, and combining the meager capacity of the wells into one stream, quantities of water were coaxed forth where now nothing can be discovered on the face of things but sad desolation.

It is probable that the extensive system of canals and other means of irrigation, remnants of which meet us everywhere in Syria and Palestine, must be studied in connection with the magnificent irrigation works on the Tigris. Chaldeans set the pace and adjoining peoples followed.

Consequently we find to-day traces of irrigation undertakings even in the desert regions to the east of the Orontes and the Jordan, which in their magnitude and perfection compel our profoundest admiration. I believe there can be no doubt but that the Ras-Baalbec Springs were utilized in ancient times to feed a canal, set carefully with cut pieces of rock and covered most of the way, which can now be followed from Lebweh over the northern declivity of Anti-Lebanon, toward Palmyra, a distance of at least 120 miles. Queen Zenobia's capital was also supplied by several streams created by the employment of the fan-shaped well system above alluded to. Only recently one of these subterranean passages was unearthed and water struck. The whole desert slopes slightly toward the Euphrates and thus facilitates this kind of "drainage."

The re-creation of Chaldea, once the richest and most coveted part of the East, is probably near at hand. Mesopotamia seems about to be reclaimed. The Bagdad Railway is advancing from the West, and European civilization is scattering before it the Arabian locusts which have so long held possession of these plains.

WINDMILLS IN USE.

Syria and Palestine, on account of the defective means employed for utilizing the subterranean water supply, are justly called semi-arid regions. The introduction of boring and pumping machinery is certain to prove a great boon. No artesian wells exist so far, but experiments are progressing with a hope of locating basins that may be tapped. All over the country large tracts of land are lying idle for lack of water.

Windmills have been tried for operating grist mills in the absence of water power. Petroleum engines seem to give better satisfaction.

Plows, sickles and threshing methods, handed down from the days of the patriarchs, are still supreme in Syria and Palestine; but on larger estates modern implements and machinery are gradually driving out the ancient tools and tactics, and further encroachments are merely a question of time.

As a result of recommendation made by this office, several American windmills were introduced in this country two or three years ago. Four of them may be seen along the Damascus road, just outside Beirut. Others were installed in the interior. Somehow, these pioneer outfits do not seem to have created that spontaneous demand for up-to-date windmills which I anticipated. It is probable that the natives expected too much of them. They are admittedly a success when employed for domestic use, but for industrial and irrigation purposes they have not as yet,, in the native mind, vindicated their reputation. Native farmers, I fear, expected heavy irrigation work from small wind engines, costing, laid down here, $150. By and by saner views will prevail and American irrigation windmills, at from $300 to $500 per outfit, will have a chance to compete with native "na'uras" and oil-motor pumps.

I would again call attention to an offer made by the firm of H. Sabbag et fils, of Beirut, published in my report in *Advance Sheets of Consular Reports* of April 12, 1900, to assist in paying the expenses of an American expert in irrigation matters, eventually coming out here to canvass the field.

Correspondence about windmills should be addressed to Michel Nasser, representing H. Sabbag et fils, Beirut, Syria; Meshaka & Nachman, Damascus, Syria; American Exchange Company, Haifa, Syria.

WATER SUPPLY, WELLS AND PUMPS.

At present in Syria and Palestine in the rainless season, which lasts from May till November, water is obtained from natural springs and open wells. From the latter the water is drawn by horse, mule, ox or donkey power in buckets attached to ropes revolving over a large drum directly above the well. One side descends while the other rises, carrying the small buckets with them; those descending are empty while the ascending ones are full. and as they pass over the top they discharge into a trough, which conveys the water into a cistern or into irrigating ditches. The buckets are fastened to the hawsers about 2 feet apart, and the system is fairly effective, being usually applied to wells 12 to 20 feet deep, though it may also be utilized to a depth of 150 feet. If the animal turns the wheel rapidly, which it rarely does, a bucket with about 2 gallons of water will be carried over the top and be discharged into the trough every second, but very few native pumps will steadily do as much. Machinery of this kind consists of a wide cogwheel, which is moved horizontally with a sweep, by some animal. This turns a larger one perpendicularly, over which the hawsers revolve.

The wheel and bucket (of different sorts and sizes) is an apparatus much used where the water is near the surface, and also along rapid rivers. For shallow wells it is merely a wheel, whose diameter equals the desired elevation of the water. The rim of this wheel is large, hollow, and divided into compartments answering the place of buckets. A hole near the top of each "bucket" allows it to fill, as that part of the rim, in revolving, dips under the water. This, of course, will be discharged when the bucket begins to descend, and thus a constant succession of streams falls into the cistern. The wheel itself is turned by oxen or mules.

This system of wheels is seen on a grand scale at Hums, Hamath, and all along Orontes. The wheels there are of enormouh size. The diameter of some of those at Hamath is 80 or 90 feet. The great advantage of this apparatus is that it is driven by the river itself. Small "paddles" are attached to the rim, and the stream is turned upon them by a low dam with sufficient force to carry the huge wheel around with all its load of ascending buckets. "There is, perhaps," says a distinguished writer, "no hydraulic machinery in the world by which so much water is raised to so great an elevation at so small an expense. Certainly I have seen none half so picturesque or so musical. These wheels, with their enormous loads, slowly revolve on their groaning axles, and all day and all night each one sings a different tune, with every imaginable variation of tone, loud, louder, loudest, down to the bottom of the gamut—a concert wholly unique and half infernal in the night, which, heard once, will never be forgotten."

Another successful mode of drawing water is used in the interior. A large buffalo skin is so attached to cords that when let down into the well, it opens and is instantly filled, and being drawn up, it closes so as to retain the water. The rope by which it is hoisted to the top works over a wheel and is drawn by oxen, mules or camels, that walk directly from the well to the length of the rope and then return, only to repeat the operation until a sufficient quantity of water is raised.

Much is to be said in favor of all these processes in this land of cheap labor. The wheels are simple in construction and easily worked and they raise surprising quantities of water. However, the value of human and animal labor is steadily on the increase, and our experience during the last five years shows conclusively that this country is ripening for labor-saving machinery, particularly along agricultural lines, as agriculture and pastoral pursuits are the main industries of the land.

Water is found at depths varying from 25 feet or less in certain parts of the littoral plains to 200 feet or more farther inland. So far all wells in operation have been dug. Pumps are used to a very limited extent and are operated by hand, wind, or petroleum power. Well-drilling machinery is urgently required in this country. All modern windmills in Syria were made at Kendallville, Ind., and Batavia and Chicago, Ill. In my district, comprising nearly all of Syria and two-thirds of Palestine, there are hardly more than a dozen really modern windmills, while there would seem to be need of thousands.

TRANSPORTATION AND FREIGHT RATES.

Goods exported from Syria to the United States now go mostly by Italian steamers effecting transshipment at Naples into trans-Atlantic boats belonging to the same company. It is known that by the Italian line goods from New York reach here in nineteen to twenty-five days. I believe I am justified in calling the attention of American exporters to the Italian route. Its agents in New York are Hirzel, Feltman & Co., 11 Broadway.

COMMERCIAL WATERPROOF CLOTH.

It would seem that inventors have not kept pace with the demand, the need, of sportsmen and every person whose calling takes them outdoors in stormy weather, of fabrics which, when made up into clothing, will turn moisture while at the same time being endurable if not comfortable when the sun is shining. The rubber-coated cotton goods so commonly employed are fit for wear at no other time than when rain or snow is falling, and some of the so-called mackintosh goods are so impervious to the circulation of the heated air thrown off by the body as to become wetter inside than out if worn long when the air is warm. Neither are they warm for ordinary wear nor flexible enough to be comfortable. The thin goods heavily coated with oil and worn as "oilskins" by sailors and as "slickers" by riders of the plains are ideal waterproof garments but intolerable for other wear, for, while they are wind proof, too, they become rigid and rattle in freezing temperatures; are "noisy," as the stillhunter says of any clothing, which, when rubbed together or against any other substance, gives forth sounds fatal to the pursuit of game.

While it has long been the practice to regard some solution of India rubber as essential to cover the cloth that is used for waterproof garments, it appears that a rival to India rubber has just entered the field. Shower proof cloth is known as that which repels water very largely and yet remains porous, appearing in all respects exactly like ordinary wetable cloth. The methods of treatment of such cloth are often trade secrets, and even the patent specifications do not divulge all that must be done to achieve a satisfactory result. *Petroleum* says that the oil to which that paper owes its name is one of the most successful showerproof preparations. It says that the only reliable shower proof is obtained by impregnating the cloth outside and in with a fine film

OUR BRITISH LETTER.

(*Continued from page 32*)

household ironmongery being very conspicuous on many of the stands. It is not always easy to pick out American goods, inasmuch as although some factors devote themselves exclusively to the introduction of American novelties, other firms select special lines from the States which they place side by side with British made goods. The experienced eye, however, quickly traces the American origin of many articles shown, in consequence of their excellent finish, clean boxing, and attractive presentment. The system of boxing Hardware has largely been adopted by English and German firms, still there is something which often indicates that certain articles have "crossed over the water," and that they are many miles from their place of origin. J. C. Plimpton & Co., of Liverpool, who have a place in New York, show "New England" lawn mowers, Mann's popular bone cutters, American garden tools, and other novelties, all of which appear to be popular in this country. If any retail dealers from the States visit the stand of John G. Rollins & Sons they can scarcely fail to recognize the American chafing dishes, "Gem" food choppers and other household lines which are now selling so freely in many British ironmongers' establishments. Of course, "Bissell" carpet sweepers are very much in evidence, and such names as "Grand Rapids," "Parlor Queen" and "Standard" are talked about freely. The Anglo-American Trading Co., Ltd., of London, have a well staged exhibit of porcelain enamelled baths, lavatories and fittings, and they show some interesting aluminum goods and knife sharpeners. George Owen & Co., Ltd., who handle the Chicago Flexible Shaft Company's horse clipping machines and automatic grinders in this country, have examples of these specialties, as well as a good show of American cabinet handles and tools. British manufacturers are, of course, largely in evidence, and in builders' requisites, grates, mantelpieces and so on, have the field all to themselves. Some excellent goods are shown, many new patterns being exhibited for the first time. The exhibition is well staged throughout, and the managers have introduced many interesting features, from which it is pretty certain that the interest will be sustained during the remainder of the time the exhibition is open.

A gentleman never speaks sneeringly of a person not so well informed as he.

Are You Fair ?

Did you ever send for one of our catalogues and, really, give it a thorough examination ?

Grant every man a hearing. That's fair. We "drum" by catalogue only. Will you not grant our only "man" a hearing—in fairness to us?

To your own self, be fair. We were, less than thirty years ago, making an insignificant start. We are, to-day, one of the country's six big wholesalers. We must be giving values and service. Surely, values and service are of interest to you ?

Goods in more than fifty different departments, truthfully pictured, clearly described—prices printed, net, and guaranteed until a mentioned date—practical talks on ways and means of doing more business—these, and more, are in every catalogue of ours. Could there be a "man" more deserving of a hearing from you?

In fairness to us—in fairness to yourself—won't you send for our July catalogue and look it over thoroughly? This July catalogue is numbered C C 507.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Baltimore, Md.—The McClellan Hardware Company has been incorporated by Jas. E. McClellan, William L. James, Condon E. Varina, John H. Meagher and Geo. F. Smith. Capital stock is $20,000.

Boston, Mass.—Peter F. Tague Co. has been incorporated. Iron, steel, Hardware. Capital $5,000. Promoters: Peter F. Tague, C. T. Tague.

Catlettsburg, Ky.—The Ben Williamson Hardware Co. of Boyd County has been incorporated, with $100,000 capital stock. Ben Williamson, Guff Wellman and Lillian Eastham of Catlettsburg are incorporators.

Dale, O. T.—The firm of S. E. Alexander & Son has been organized and have opened a new store to deal in Shelf Hardware, stoves, agricultural implements, etc.

Humboldt, Neb.—Work has been commenced here on the excavations for a large brick store building on the west side of the square to be occupied by the firm of Wozab & Ford, Hardware dealers.

Norwalk, Ohio.—The Norwalk Hardware Co. has been incorporated with a capital of $15,000.

Ogdensburg, N. Y.—John Barr has opened a new Hardware store in addition to his present business and connected with it by an arch in the side wall.

Palouse, Wash.—The Palouse Hardware & Implement Co. has been incorporated with a capital stock of $30,000. The company has acquired the Hardware business formerly carried on by W. F. Chalener and will also handle furniture.

Parkers Landing, Pa.—A new Hardware store has been opened by Messrs. Coe & Shira.

Springfield, Mass.—Chapman & Brooks Co. has been incorporated. Objects: To buy, sell and deal in at wholesale and retail all kinds of Hardware and wooden ware. Capital, $40,000. President: Harvey Chapman, Stafford Springs, Conn.; treasurer and clerk, A. Olin Brooks, Springfield.

Utica, N. Y.—Geo. J. Gregory has opened a new Hardware store in the Symonds block.

Changes.

Beiview, Minn.—Thompson-Brown Hardware Co., with E. H. Brown as manager, have succeeded the New Hardware Company.

Bridgeport, Neb.—B. L. Neff has disposed of his Hardware and agricultural implement business to Elter & Co.

Carthage, Mo.—The Drake Hardware Co. have succeeded Drake-Bahney Hardware Co.

Gloucester, Mass.—Fred K. Burnham has purchased the grocery and Hardware business which was carried on for a number of years by his father, and will continue to do business at the same stand.

Goshen, Ind.—The Hardware firm of James A. Riley Son has been dissolved and its successor will be known as George A. Riley & Co., the father having transferred the establishment to his son. For the past six months Mr. Riley Jr., has been connected with the firm of Albaugh Bros., Dover & Co., of Chicago, a large mail order house, but the health of his father necessitates his retirement from business. He will therefore return home and take up the business which the senior Mr. Riley has conducted for the past twenty-two years.

Haddam, Kan.—Driskell & Stanley have purchased the Hardware and furniture business formerly conducted by Sellers & Sons.

Irwin, Iowa.—Peter Steenhusen has purchased the general Hardware business formerly conducted by Charles McConnell.

Kingston, Tenn.—J. A. Mulcke, dealer in Hardware, has just completed a new warehouse, 24 by 60 for buggies and wagons.

Lebo, Kan.—Haigler & Lewis have disposed of their Hardware, stove, paint and implement business to Lewis & Kirkham, who will continue the business.

Manila, Iowa.—Denny & Hockett, dealers in shelf and heavy Hardware, stoves, pumps, and wind mills, have been succeeded by I L. Hockett.

Mason City, Ia.—The Mason City Implement Company has changed its name to Loomis & Dunlay and has increased its capital stock from $15,000 to $25,000.

Mason, Tex.—Louis Schmidt, Hardware dealer, is putting up a new store building on the lot he now occupies.

Norristown, Pa.—Mr Elston, who for twenty years has conducted a Hardware house furnishing, crockery, etc., store, will retire from this business on account of pressing outside interests.

Oak, Neb.—I. W. Harrison has bought the general Hardware business formerly conducted by J. C. Hartsough.

Oakland, Ia.—Maloney Bros of Red Oak and Elliott, wso have several other Hardware stores in Western Iowa, have just purchased the large Hardware store of David Wentz.

Providence, R. I.—E. T. George & Co. retail Hardware dealers, at 31 Weybosset street, will sell out their stock and retire from business.

Schuyler, Neb.—Craig & Morris have purchased the Hardware and implement business of T. E. Molacek, which has been established for twenty-three years.

Shreveport, La.—The Vordenbaumen-Eastham Co., Ltd., Hardware dealers, have taken over all the stock of the Lake Bros. Hardware Co., of Dallas, Tex. J. A. Lake, of the Dallas concern, will remove to Shreveport and go in as secretary of the consolidated company, which will continue under the old name.

South Fork, Pa.—Messrs. George Bros. have about completed the erection of a large two-story warehouse.

Steubenville, Ohio.—Weir & McClave have purchased J. D. Porter's Hardware business and will continue at the old stand.

Steubenville, Ohio.—A. W. Weber, formerly in business at Irondale, Ohio, has recently associated himself with the Steubenville Hardware & Supply Co.

Topeka, Kan.—The Pratt Bros. have purchased the Holman Building on the corner of the Avenue and Laurent street, and will move their Hardware and implement store to these new quarters.

Toronto, Can.—T. C. Weir, one of the members of the Toronto Hardware Co., Toronto, Ohio, has formed a partnership with Mr. McClave, under the style of Weir & McClave, and they have purchased the Hardware business of J. D. Porter, at Steubenville, Ohio. Mr. Weir still retains his connection with the Toronto Hardware Co., his interest in the new firm being in addition to his present business.

Watertown, N. Y.—Spratt & Corcoran have moved their large Hardware stock to 18 Public Square.

Waterloo, Iowa.—The Hardware store at 108 East Fifth street has a record of having been disposed of more times in a short time than any other business in Waterloo. Within seven weeks five different parties have been at he head of the establishment and the present proprietor is negotiating its sale again. On April 4th, F. W. Totten opened the place in the building formerly occupied by Todd Bros. drug store. May 7th the business was disposed of to H. A. Pench, who remained in control about three weeks. In the last three weeks four other men have been managing the place. The business has changed hands as follows: F. W. Totten to H. A. Pench to Mr. Webberking to Chas. Phifer to Dell Sumner to A. J. Ackerman. Mr. Ackerman acquired possession through a real estate deal with Mr. Sumner, and will probably dispose of the stock, either by private sale or by auction.

Weymouth, Mass.—J. E. Ludden will operate the business formerly conducted by the Baker Hardware Co.

Winfield, Kan.—Winfield & Miller have dissolved partnership, and the Hardware stove and plumbing business will be continued by W. S. Miller, under the firm name of Miller Hardware Co.

Fires.

Clare, Mich.—On July 2d fire damaged the Clare Hardware Co. to the amount of $10,000.

Jamestown, N. Y.—On July 7 fire was discovered in J. K. Miller's Hardware store at the Chautauqua Assembly grounds. Two public buildings, the Temple and Kellogg Hall, were burned. The total loss is estimated at $50,000.

Jefferson, Tex.—On July 1st the stock of the Gorrans Manufacturing Company, dealers in Hardware, implements, etc., was damaged to an amount between $75,000 and $90,000; insured for about half its value.

Paducah, Ky.—The wholesale and retail store of the Scott Hardware Co. was damaged to the extent of $38,000, with insurance for $30,000.

Reading, Pa.—On July 3d the Bright & Company Hardware store was damaged to the extent of $10,000.

Miscellaneous.

Nashville, Tenn.—On June 30th the Gray & Dudley Hardware Company mailed checks to its stockholders for the quarterly dividend of 1¾ per cent., declared June 15.

THE HAMMOND TYPEWRITER

A clogged track on a barn door originates more cuss words in two minutes than a man would ordinarily use in a year, and the owner of that measly barn door does not harbor any affection for the dealer that sold it to him.

The Bischoff Doorhanger, owing to the angle shaped track, sheds dirt, snow and ice as a duck does water. It can't clog, neither can it jump the track, another trick of the average hanger.

You can quickly demonstrate these strong features with our handsome display model, which we send free with one dozen pairs Bischoff Doorhangers.

Doorhangers $8.75 per doz. pairs.
Track 6 cents per ft., f. o. b. your city.
Goods returnable at end of 30 days collect.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published,

New Incorporations, Etc.

Buffalo, N. Y.—The Tuttle Manufacturing Company has been incorporated. The company is capitalized at $50,000, and will manufacture and sell Tuttle posthole augers and other tools and implements. The directors are C. L. Tuttle and C. B. Ernst of Rochester and F. M. Higgins of Warsaw.

Chattanooga, Tenn.—The Gonce Lock Mfg. Co. has been incorporated with a capital stock of $10,000, to manufacture keyless combination locks, the patents for which have bene secured in this country and Europe.

Chicago, Ill.—Strube Machine Works has been incorporated. Capital $50,000. Manufacturing machinery and implements. J. B Paine, Wilbur Bassett, Edith Edgren.

Cincinnati, Ohio.—The Dana Mfg. Co., of Cincinnati, capital stock $10,000, has been incorporated to make ice cream freezers. S. F. Dana, George F. Dana, Frank Snook, Frank M. Roosa and J. Edward Sullivan, incorporators

Cincinnati, Ohio.—The Bennett Stove Co. has been incorporated with $20,000 capital, by Charles H. Bennett, Oliver B. Strauss, Thomas B. Paxton, Jr., J. D. Meeker and Enoch L. Stricker.

Cincinnati, Ohio.—Great Central Novelty Works has been incorporated by Horace D. Jones, George S. Bishop, Milton J. Schloss, Thomas W. Stevenson, Louis J. Haber. Capital stock $25,000. They will make display figures, etc.

Creston, Ohio.—The Wayne Handle Company has been incorporated. Capital stock $10,000. Josiah Williams, James S. Taylor, A. S. Tuttle, J. G. Matteson and W. J. McGrew incorporators.

Cleveland, Ohio.—The Dublin Crude Oil Company has been incorporated with a capital stock of $50,000. The incorporators are: D. H. Arthur, William A. Babcock, Charles B. Bleiler, M. J. Von Swearinger and F. W. Pendexter.

Frankfort, Ky.—The Foster-Mother Mfg. Co., of Boyd County has been incorporated. Capital $15,000. Hardware manufacturers.

Fulton, N. Y.—The Michael C. Ryan Co. of Oswego County, has been incorporated. To manufacture and sell novelties, metal goods, hardware specialties, etc. The capital stock is $5,000. The directors for the first year are as follows:: Michael C. Ryan, of Phoenix, Rollo G. Jermyn, of Scranton, Pa., and George H. Bond, of Syracuse.

Hanover, Pa.—The C. S. Garman Co. has been incorporated to manufacture Sarven, Warner, Star and plain wheels, spokes, hubs, rims, shafts, neck yokes, poles and whiffletrees.

Nashville, Tenn.—The Goodpasture, Tennison & O'Sullivan Mfg. Co. is another manufacturing concern that will soon be added to Nashville's list of enterprises. The firm will be located at 139 and 141 North Market street, and will manufacture all kinds of saddles and harness.

Oakland, Cal.—The old property at Benicia so long occupied by Baker & Hamilton for their agricultural implement plant has ben sold to a newly organized company incorporated under the laws of the State of Nevada as the Benicia Iron Works. It is understood that his change of ownership means a large increase in the capacity and output of the plant.

Pittsburgh, Pa.—The Chamberlain Weather Strip Co. has been incorporated with a capital of $5,000. James Bredin of Butler, Pa., is one of the principal shareholders.

Rochester, N. Y.—The Rochester Ideal Specialty Co. has been incorporated to make and sell a vegetable slicer and other novelties, with $3,000 capital stock. The directors are: Charles Erdle, Frederick J. Lander and Raymond A. Carroll.

Stamford, Conn.—The Davenport & Tracy Company has been incorporated. The corporation is organized with a capital stock of $130,000 for the purpose of manufacturing piano and other Hardware.

Syracuse, N. Y.—The Farmers' Industrial Union has been incorporated to manufacture agricultural implements. Capital $100,000. Directors: Walter McMullin, Syracuse; J. L. Kyne, East Syracuse; Charles H. Root Caledonia.

Syracuse, N. Y.—Syracuse Cutlery Company has been incorporated; to deal in cutlery. Capital $40,000. Incorporators and directors for the first year: John Gardiner, F. P. Cortigan, A. Klein, Syracuse, N. Y. They have taken over the business of the Juengel-Klein Company and will extend the business in the building at North Salina and East Willow streets. Next year the company will erect its own factory building.

Miscellaneous.

Cleveland, Ohio.—The Van Dorn Iron Works have secured a contract from the Board of Public Safety of Youngstown, O., for steel cells for a large annex to the city jail.

Kansas City, Mo.—At a recent meeting of the directors of the Landis Stove Company, W. E. Winner, president, resigned, and W C. Whetenburg was elected to the place. The board of directors was increased from six to nine and Mr. Whetenburg, M. Burns and W. P. Burns elected members.

Lafayette, Ind.—A meeting was held on June 25th by the directors of the Lafayette Stove Foundry Co., at which Superintendent Kendal was instructed to continue the work of arranging the building and making the necessary improvements. It is hoped that the factory will be in operation by the middle of August.

Syracuse, N. Y.—Arthur Klein of the Syracuse Cutlery Co. will go to Germany next month for the purpose of consolidating the original factory located there with the factory in Syracuse. This company will eventually erect a large factory building in Syracuse.

Changes.

Ashland, Ohio.—The Ashland Steel Range & Manufacturing Co. is prospering to a greater degree than its most sanguine friends expected it would. The company began doing business in January. Early in the spring a large foundry was built and now a wareroom 56x98 is being erected This latest addition extends north from the main buiding. It will have a basement and be the same height as the main building.

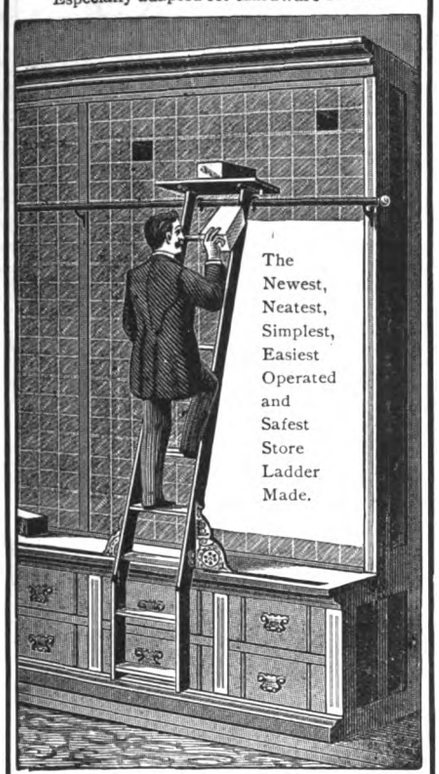
Chattanooga, Tenn.—The Chattanooga Plow Co. is erecting a power plant and grinding department and compressed air and electrical devices will be installed in the plant for the painting of plows and for driving the machinery of the plant. These improvements will involve the expenditure of $50,000.

Lansing, Mich.—The Central Implement Company of this city has been making extensive additions to its plant in Standish for the manufacture of farming tools. The company purchased the plant the first of the year on account of its proximity to the timber used in the manufacture of farming tools, and new buildings which will greatly increase its capacity have just been completed. Two new buildings of cement construction have been added to the plant. One of them is 58 by 178 feet and the other is 24 by 40 feet.

Newcastle, Pa.—The size and output of the Baldwin & Graham stove works of this city are to be largely increased. This has been decided by the board of directors of the Pittsburg Stove and Range Co., which controls the local plant, and seven other stove foundries of this district.

New Haven, Conn.—The general and executive offices of the National Wire Corporation are to be removed to New York for lack of facilities here.

Omaha, Neb.—Within the next few weeks work will be commenced on a new three-story brick building by the Allen P. Ely Co. at 1106 Douglas street. The building is to supplement the one now used by the company, which deals in machinery, engines and heavy Hardware. The building will be of brick and will cost about $30,000. It is to be 40 by 120 feet.



Pittsburgh, Pa.—The Pittsburgh Shovel Co., Frick Building, Pittsburgh, have just completed the erection of a new forge department at heir works at Leechburg, Pa. The new work includes an additional forge shop 40 by 60 feet, in which a complete line of modern drops, hammers, etc., for use in the manufacture of welded shovels has been installed.

Torrington, Conn.—Work has been commenced for the foundation for a two-story brick factory addition, 50 by 102 feet, to the large plant of the Union Hardware Company. The new building will be of regular mill construction.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Davenport, O. T.—Gassett & Son have opened a new retail store here to deal in sporting goods, Shelf Hardware, paints, etc.

Grove, I. T.—The Grove Hardware Company has been incorporated to deal at wholesale and retail in sporting goods, Hardware, stoves, oils, etc.

Huntsville, Ala.—James F. Burnam, Milton Banier and C. C. Green have organized the Wear-Proof Pneumatic Tire Protector Company, incorporated with a capital stock of $2,000 for the manufacture of a leather tire protector patented by Burnam. The manufactory will be located in Huntsville.

Parsons, Kan.—H. C. Morehead has opened a new store at 115½ North Central Avenue to deal in sporting goods, cigars, books, etc.

Wellsville, N. Y.—The Kerr Turbine Company has been incorporated with a capital of $100,000. Incorporators: C. V. Kerr, Rutherford, N. J.; T. J. Applebee and W. L. Ward, Wellsville, N. Y.

Changes.

Bowling Green, Ohio.—Jones & Niver, dealers in sporting goods, Hardware, stoves, etc., has sold their business to G. W. Loomis & Co.

Bristol, Conn.—The New Departure Manufacturing Company is about to establish a branch factory at Berlin, Germany, for the manufacture of bicycle parts. A. F. Rockwell, manager of the company, and John Peterson, foreman of the assembling department, are now in that city to superintend the work. The new plant will employ about 50 hands. The company has shipped part of their automatic machinery to Berlin. The new plant will be in operation about August 1.

Chicago, Ill.—The Federal Mfg. Co. have sold the business, good will, etc., of the Thompson plant to H. J. Cassidy, and Mr. Cassidy has leased the plant.

Chicago, Ill.—Moran & Wolfersberger Gun Company have changed the firm name to Moran & Wolf Gun Company; capital increased from $10,000 to $100,000; directors increased from three to five.

Columbus, Ohio.—At a meeting of the directors of the Columbus Hardware Co. some time ago, it was decided to separate the wholesale and retail departments, which were being conducted at 143 South High Street. Promptly following this announcement came an offer from Leslie C. Mithoff to purchase the retail store, which culminated in a sale June 16, and the store will hereafter bear the name of the new proprietor, Leslie C. Mithoff. Mr. Mithoff is a thoroughly practical Hardwareman, having spent his entire life in the business, and this, coupled with the fact that the store room has been occupied for over 75 years by the Kilbourne-Jones Company and the Columbus Hardware Company respectively, is assurance that this latest move in ownership will prove a success. A full and complete line of strictly first-class Hardware and the largest line of sporting goods in Central Ohio will be carried, while an addition of kindred lines is now being considered. Frank Siebert, the city's pioneer gun man, will continue in charge of the sporting goods department.

Hillsboro, Iowa.—B. M. Eastburn & Son have purchased the sporting goods, Hardware, stove, agricultural implement and paint business heretofore carried on by H. H. Masden.

Norway, Kan.—Strain & Burton have disposed of their sporting goods, Hardware, stoves, farm implement and paint business to D. J. Burton.

Portsmouth, Ohio.—Lloyd, Adams & Simpson have moved their pistol manufacturing plant to their own new building at Front and Jefferson Streets.

Sand Point, Idaho.—E. D. Farmin has been succeeded by Thomaston Bros. & Hanson in the sporting goods, Shelf and Heavy Hardware, etc., business.

Seneca, Kan.—G. W. Williams is successor to William Winkler in the sporting goods, Hardware, stove, implement and paint business.

Springfield, Mass.—The whip stock of the late Alexander J. Comstock was sold at auction on July 8th.

Fires.

Evansville, Ill.—Damages to the extent of $3,000 was caused to the shop of H. E. Chandler, the bicycle dealer, recently. It was caused by the explosion of a brazing forge which resulted in the total destruction of the establishment, with all the bicycles in it.

Jamestown, N. Y.—A bicycle store conducted by W. L. Fox was totally destroyed on July 7th.

Wakefield, Mass.—The bicycle shop of Hughes & Dinan on Center Street caught fire from a naphtha lamp on July 10th and caused a loss of $300.

Miscellaneous.

Bellefontaine, Ohio.—The Orr spoke factory here has received an order from Spalding & Co. for a carload of baseball bats.

Elkhart, Ind.—The Acme Bicycle Co., which passed into the hands of a receiver some months ago, is still being operated by order of the court. The order is renewed from time to time.

Albany, N. Y.—The Albany Saw Company, at its annual meeting, elected Alexander H. Spierre president, Linneaus H. Burdick treasurer, Gaylord Logan attorney, and declared a dividend of 10 per cent.

Hartford, Conn.—The Hartford Rubber Works Co. made several changes in their board of directors at a meeting held June 7. C. H. Dale was elected president; William Seward, Jr., first vice-president; C. H. Hunter, second vice-president; James W. Gilson, secretary and treasurer. Henry Plows was appointed assistant to the secretary-treasurer, J. D. Anderson, and James W. Gilson were elected directors. Lewis D. Parker retired from the presidency.

SOME OF THE REASONS WHY HE WAS NOT PROMOTED.

We watched the clock.
He was always grumbling.
He was always behindhand.
He had no iron in his blood.
He was willing, but unfitted.
He didn't believe in himself.
He asked too many questions.
He was stung by a bad look.
His stock excuse was "I forgot."
He wasn't ready for the next step.
He did not put his heart in his work.
He learned nothing from his blunders.
He felt that he was above his position.
He chose his friends among his inferiors.
He was content to be a second-rate man.
He ruined his ability by half doing things.
He never dared to act on his own judgment.
He did not think it worth while to learn how.
He tried to make "bluff" take the place of ability.
He thought he must take amusement every evening.
Familiarity with slipshod methods paralyzed his ideal.
He thought it was clever to use coarse and profane language.
He was ashamed of his parents because they were old-fashioned.
He imitated the habits of men who could stand more than he could.
He did not learn that the best part of his salary was not in his pay envelope.—Orison Swett Marden in *Success*.

WORTH CONSIDERING.

Farwell, Ozmun, Kirk & Co., St. Paul, Minn., send out a little letter in which they give the addresses of a number of towns where they believe Hardware men could profitably locate. These towns include Baker, Minn.; Hawick, Minn.; Canton, Minn.; Simpson, Minn.; Russell, Minn.; Akely, Minn.; Clarissa, Minn.; Ruthton, Minn.; Randall, Minn.; Downer, Minn.; Brushvale, Minn.; Laurel, Minn.; Taylors Falls, Minn.; Butternut, Wis.; Taylor, Wis.; Hixton, Wis.; Trempealean, Wis.; Ogema, Wis.; Prairie Du Chien, Wis.; Fayette, Ia.; Troy, Idaho; Wardner, Idaho; Moreton, N. D.; Osnabrock, N. D.; Petersburg, N. D.; Edwall, Wash.; Provo, Utah; Mt. Pleasant, Utah; Ogden, Utah; Havre, Mont.; Chinook, Mont.; Kendall, Mont.

The Part that does the Business.

SAVE 1-2 YOUR FUEL
BY USING THE
ROCHESTER RADIATOR
IT WILL DO IT

TAKE a common sense view of heating—if you wish to heat a poker you will hold it over the fire, not at the side. We hold 96 to 120 pokers or tubes over the fire, each having a hollow air space in centre through which a current of air rapidly passes, sending the heat to all parts of the room, getting much greater results than any **DRUM** or side heater can give.

Inquiries from your town in answer to our advertising in all the leading Magazines and Family Papers are referred to you when you carry our goods in stock. Thus we sell them to you and then sell them for you.

Over 100,000 of them in use.
Write for Descriptive Catalogue and Prices

ROCHESTER RADIATOR COMPANY, 150 Furnace St. Rochester, N. Y.

Heating Stoves for Gas

The most complete line of specialties for the

NATURAL GAS TRADE

Appliances of all kinds for fuel gas. New Catalog 36 ready after August 1st.

Catalog 24 Natural Gas Fittings.
Catalog B Natural Gas Burners.

REINEKE, WILSON CO.

Factory, Johnstown, Pa.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

No. 1 Fire Pot
$6.00 net.

What would you think of a man who would purchase an old fashioned reaper, one of the kind that drops the grain in little piles requiring four or more men to follow it in order to tie up the bundles?
Foolish, sure.
Still many men are buying Fire Pots and Torches that are old fashioned, out-of-date or made after worthless and abandoned ideas, thus handicapping themselves and making it hard if not impossible for them to compete with the wide-awake competitor who has confined his trade to the "Your money back if you are not pleased line." Our catalog is free and it will save you many dollars if consulted. Jobbers supply at factory price.

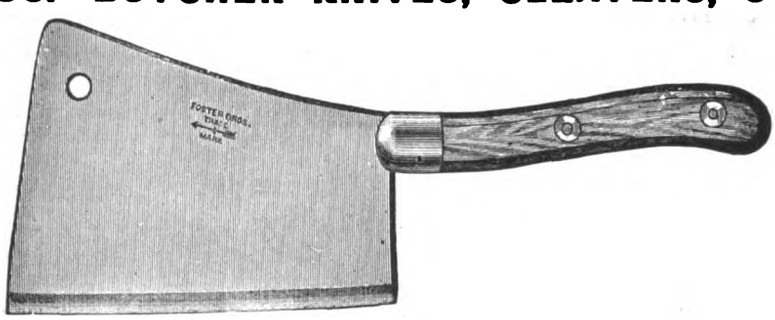
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

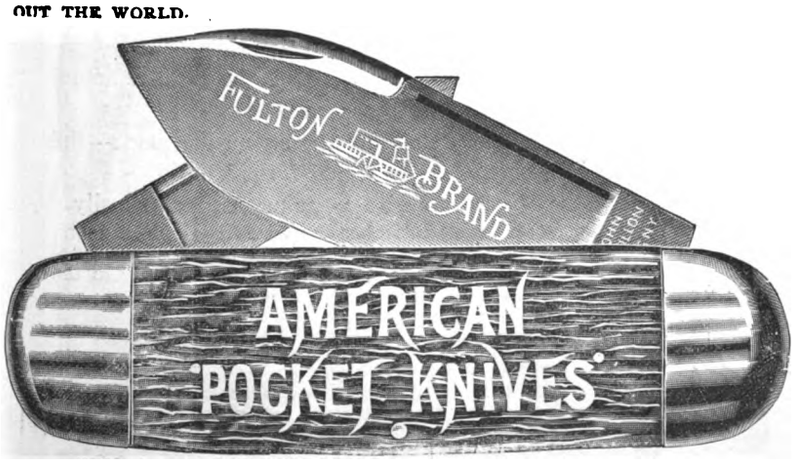


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

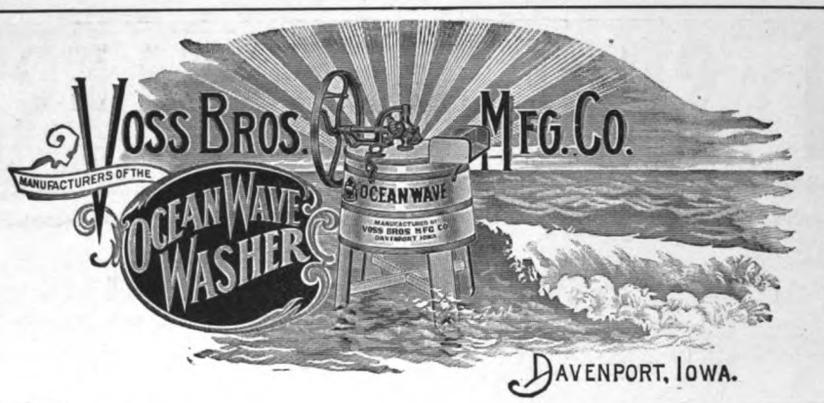
FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.



Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

ESTABLISHED 1835

JOHN CHATILLON & SONS, New York City.

The Taylor Quick Adjusting Self Locking Clamp

FOR GENERAL USE.

The most powerful and best steel bar clamps made for their weight

Great Time Savers.

No notches to weaken the bars.

Continuous use by concerns who need superior quality, have proven these clamps to withstand the most severe tests and have been given preference over all others.

Send for booklet and learn more about them. JAMES L. TAYLOR, Newark, N. J.

WHY IS THE **O.K.**

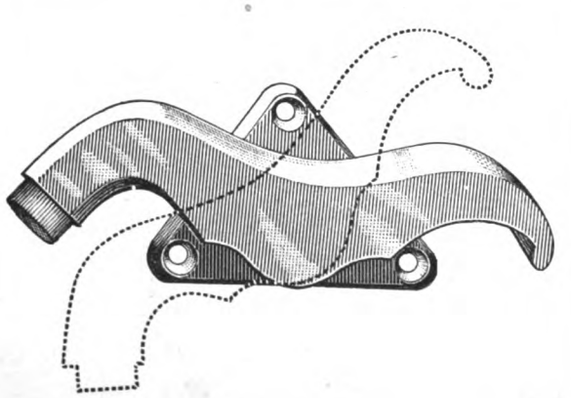
The **Best Rotary Washing Machine?**

BECAUSE

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the **friction** and thus making machine so **light running** and almost **noiseless.**
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without **rubbing** them to pieces.
4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

MANUFACTURED BY

H. F. BRAMMER MFG. CO.



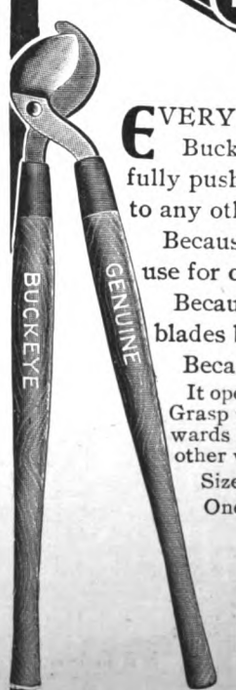
DAVENPORT, IOWA.

Simplicity
Durability
Neatness

are the points of excellence of

The Empire Door Holder Improved

Has other good points:
It Gives 50% greater



pressure on the floor than any other make. Will hold the heaviest door.

Try to sell a few of them and you'll be surprised how quickly they will create a demand for more.

CALDWELL MFG. CO.,

Rochester, N. Y.

EVERY dealer should handle the Genuine Buckeye Pruner, because he can carefully push it to his best trade, in preference to any other pruner made.

Because it has stood the test of actual use for over 30 years.

Because it is the strongest made---the blades being hand-forged.

Because no other made cuts so easily.

It operates just opposite from other pruners. Grasp the limb with the hook, and cut towards you. It's quicker and easier than the other way.

Size 25—inch.

One dozen in a case.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

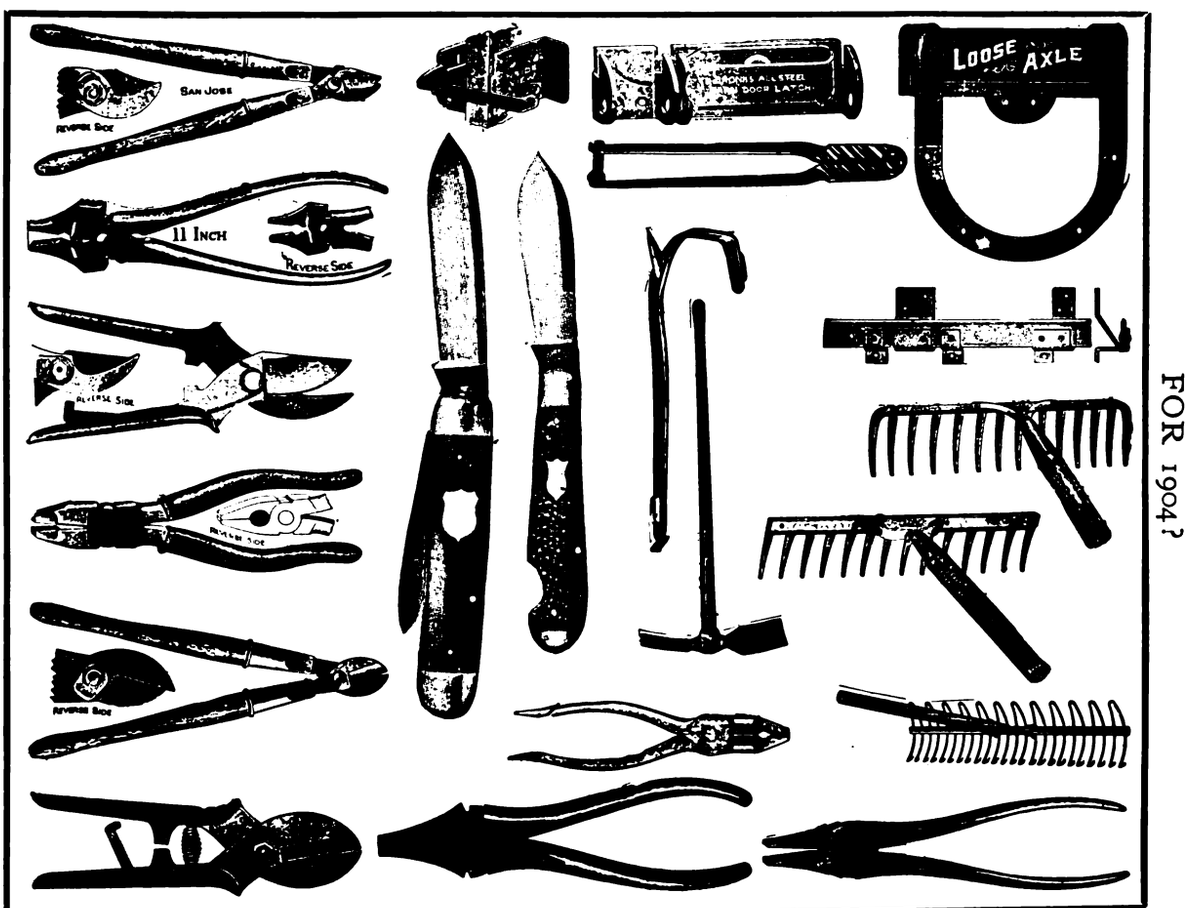
¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory; prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.



¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

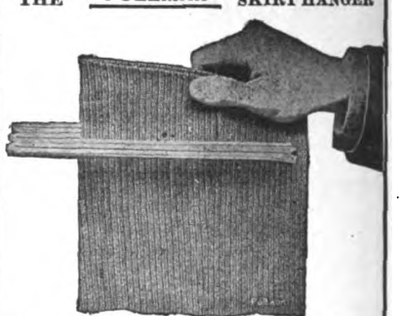
"For Those Who Want the Best"



DOUBLE FALCON WRENCH

An inch and three-quarter off-set to allow work close to the wall or ceiling. Each one has two jaws, right and left hand. Made on an improved principle over the alligator wrench. Fixed and flaring jaws, the combination of the grasping jaw and serrated face, with the bearing jaw with straight bearing face. Grasps and releases a pipe with ease and certainty, the curved outline of the pipe finding a tangential bearing in all parts of the opening. The curved jaw first engages the pipe, and then the straight jaw slips under the pipe until jammed tightly into the opening between the jaws, the action being entirely automatic. A forging of the finest tool steel, teeth accurately milled, hardened in the best possible manner, polished and finished with cyanide.

BEST BY EVERY TEST

You want the best goods because you want the largest profits.

You want **Hauthaway's "Star" Harness Specialties.** They are best by stable test, and they are the tested best because they are made of the best material, in the best manner, by the best process.

They are "stars," brilliant, effervescent in selling and pleasing qualities. Each year but confirms their superiority over all other similar articles.

Hauthaway's "Star" Harness Oil Soap

The purest made. It is food to the leather, and has the shine in it. It is kind to the hands, healing and cleansing, because there is no free alkali in it, mainly mutton tallow. It is a Cresceus in selling ability. Best, and works that way.

Hauthaway's "Star" Harness Oil Blacking

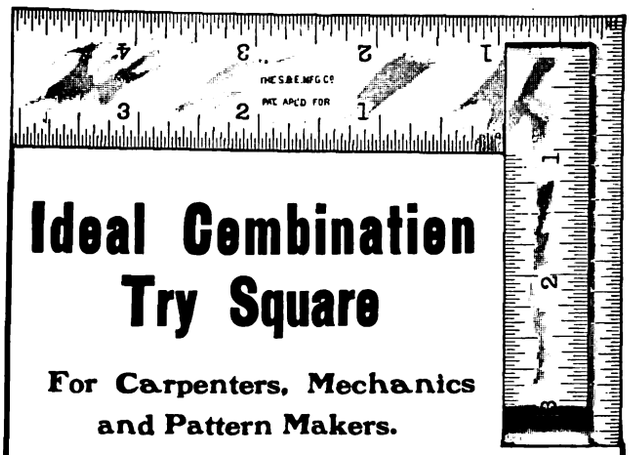
The much demanded thing. Oils and blackens and shines, all at the same time. Puts new life and good looks into the leather. Best by test. Always sells in a hurry, and at a good profit. Try a sample order.

HAUTHAWAY'S SPECIALTIES

Hauthaway's "Star" Harness Dressing

The "star" of them all! Outclasses all others, surpasses all others in popular favor. Makes old harness look new, and new harness look newer. It is the king-pin dressing, and sells like a spicy novel. It puts money into the dealer's pocket, because it sells and keeps right on selling. Ask for facts.

Hauthaway's "Star" Axle Oil



Makes axles slippery as an eel. No more heated boxes. The Hauthaway body does it—not a greasy body, but a full frictionless body that resists wear. There is money in it for the aggressive dealer. Yes, there is!

Send to us for HAUTHAWAY'S Literature. Tells more facts worth knowing. Secure our prices, and know our goods. The rest is easy.

HARDWARE

The July issue of *Trade Topics*, issued by Reineke, Wilson Co., Pittsburgh, Pa., contains among other things a very interesting article on "Greater Pittsburgh," which gives many surprising facts concerning the Smoky City. It also contains a history of the Reineke, Wilson Company and a description, well illustrated, of its present plant and offices. Hardwaremen will find *Trade Topics* interesting, and as well this firm's catalogue No. 27 of Pumps and Water Supplies and catalogues No. 35 and 36 of Gas Stoves, Heaters and Ranges.

Henry Schade announces that he has resumed full ownership and charge of the Brooklyn Lock Company, No. 54 Ainslie Street, Brooklyn, N. Y. He will continue to manufacture an extensive line of latches, locks and metal specialties.

The Lisk Manufacturing Company, of Canandaigua, N. Y., secured a space of thirty by forty feet in the Manufactures Building at the St. Louis Exposition, and has erected a pavilion there at a cost of $10,000 for the display of tinware, enameled and nickel plated ware.

The annual meeting of the stockholders of the Peck, Stow & Wilcox Company, Southington, Conn., was held at that place July 28. Much gratification was expressed at the favorable showing, the usual quarterly dividend of 2 per cent. being declared, payable July 30, together with an extra dividend of 2 per cent., payable August 15, thus making 10 per cent. for the year on a capital stock of $1,250,000. At the election of directors the old board was again chosen, with the addition of Frank C. Sumner, treasurer of the Hartford Trust Company, Hartford, Conn., to fill a vacancy. The Board of Directors re-elected the same executive officers unanimously.

"NONEX," A DEVICE TO PREVENT OIL OR GASOLINE EXPLOSIONS.

United States Consul Halstead, Birmingham, England.

The Nonex is a device which, according to public tests made recently in London, renders all receptacles containing inflammable liquids comparatively secure from explosion. The device is an application of the principle of the Davy lamp, supplemented by a fusible cap or plug.

If a vessel of ordinary type containing an explosive liquid be subjected to sufficient outside heat, or if the contents be lighted at the orifice, the walls of the tank will burst by the force of the expansion. At an exhibition given by the owners of the patent, the Non-Explosive Device Company, a 20-gallon tank was partly filled with gasoline and placed upon a lighted bonfire. The fusible screw cap, made in two parts which were simply soldered together, soon blew out, the solder having melted, and the ascending vapor caught fire immediately; but no explosion followed because the orifice of the tank formed the upper end of a tube which projected down inside the vessel to its bottom, where it was closed. To allow the oil or gas to percolate from the interior of the tank each of the metal layers of which this tube was composed had been perforated, and, while the perforations would permit the spirit to be poured out, they prevented the passage of the burning gas to the interior by absorbing its heat as the wire gauze does in the Davy lamp. While the gasoline contained in the tube burned the flame did not extend to the liquid or accumulate vapor in the half-full tank and, consequently, there was not sufficient expansive force generated to burst the tank. The flame was easily extinguished with a bundle of rags and then lighted and put out several times. The gasoline would, I judge, percolate constantly through the perforated layers of metal to the inside of the tube and there keep up a continuous burning; but according to the accounts of tests which I have read, the flame does not appear to have been allowed to burn any length of time to see how long the metal layers of the tube could absorb the heat without becoming so hot that they would heat and dangerously expand the gasoline in the tank. A motor car tank to which the device was affixed was lighted with a match and extinguished at will. A gasoline can without the device exploded almost instantaneously when lighted. The device applied to small gasoline cans, kerosene drums, and other petroleum containers would undoubtedly serve a desirable purpose.

IMPORTANT CHANGE IN CHICAGO.

Kelley, Maus & Co., Chicago, has purchased the stock, accounts, good will and business of the S. D. Kimbark Company, the oldest heavy Hardware house in Chicago. The Kimbark Company went into the hands of a receiver some months ago and three weeks ago settlement was effected with the creditors and the receiver was discharged. The stock from the Kimbark house will be transferred to Kelley, Maus & Co.'s warehouse.

HANDY FOR GARDENERS.

Hardware men who have among their customers any number of florists, farmers or gardeners, should certainly be interested in the specialty recently placed on the market by John J. Olinger, 200 West 44th Street, New York. In his "Fertilizer and Transplanter" he offers to the trade an article which would seem to be wanted by every one having to do with flowers or gardens. It is made of the best sheet steel and is so simple in construction that it would be practically impossible for it to get out of order. The price to retailers for these goods are $2.50 per dozen in five dozen lots, or $3.00 per single dozen.

LADIES ARE LEARNING TO AIM STRAIGHT.

Using firearms does not necessarily mean to hunt game, kill and destroy. Target practice is a sport the fascinations of which are rapidly becoming more appreciated and can be enjoyed by young and old of either sex.

There are a number of excellent bowlers, golfers, tennis players, etc., among the fair sex—in fact, the masculine province of outdoor sport is more and more invaded by the athletic young lady of the period. It is a gratifying sign of the times that "hitting the bull's-eye" at target practice is now claiming the attention of the outdoor girl, and there is certainly no more beneficent sport or exercise.

"Looking for new worlds to conquer" and the persistent efforts made by the J. Stevens Arms & Tool Company, Chicopee Falls, Mass., makers of the famous Stevens Firearms,, in advocating this delightful recreation, are main factors for the extraordinary interest among the fair sex in target shooting. To be properly equipped means the adoption of Stevens rifles and pistols—these arms hold more records than all other makes combined, and *cost no more*.

NEW COMPANY—OLD BUSINESS.

On Monday, August 1st, 1904, the Day & Holt Co., of Catskill, N. Y., was incorporated, to do wholesale and retail business in Hardware and other merchandise; and has since purchased the business owned for many years by Jeremiah Day and Samuel E. Holt. Incorporators were Jere. Day, Samuel E. Holt and Philip L. Walsh, of Catskill, and Frank J. Webb, of Port Jervis, N. Y. At a business meeting held August 1st, the above-named persons were made directors and the following officers elected for the term of one year, viz.: Jere. Day, president; Frank J. Webb, vice-president; Samuel E. Holt, treasurer and manager; Philip L. Walsh, secretary.

This change marks the second transfer of ownership in this business during the past seventy-one years—the first one occurring in 1883, at which time Day & Holt purchased the establishment form the late John T. Mann of pleasant memory, who had conducted it for about fifty years. Previous to that early period the concern was a well-known old firm (owned by Cooke & Atwater) in the same line of trade. Thus is shown a continued prosperous business record of upward of a century, something rather remarkable in these days of quick changes.

Vice-President Webb is a well known Hardware man, who for many years had been connected with Swinton & Co., of Port Jervis, as sales manager, and Secretary Walsh for the past five years has been one of Day & Holt's hustling salesmen.

It is pleasing to note that while this is a change in the title of the business, the management of its affairs remains in the same hands which have earned for the firm of Day & Holt an enviable reputation for first-class business methods and square dealing with its customers.

A gentleman will not boast of his ability to hide little peccadillos.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

Vacation still has its effect, and the wants of jobbers naturally on the increase will very soon all be provided for. The salesmen out on the road present very good reports, as they find conditions are much better than they anticipated. Although anticipating a good Fall trade, indications point to a prosperous season, but with no speculation gilding their hopes, as there are no advances in sight as far as can be seen, and declines are only noticeable when they are put forward as bait to get orders.

There is every evidence that orders for General Hardware in the future will be good. Some goods are already beginning to arrive, such as coal hods, pipes and elbows, and stove boards. These are the forerunners of a good season, which with skates, sleds and other articles of a similar nature, it is desired to have arrive promptly.

Large corn crops in the Western territory will make it necessary for a large trade in huskers. Many dealers having held off during July for their Fall supplies will now commence to order. Many orders are consequently being booked for skates, stove boards, meat cutters, stuffers, lanterns and other Fall goods, the orders for which are not as large as usual in the number of items, but the quantities on the whole are deserving of consideration.

The Southern states have made large crops of corn, wheat, oats and hay, while the prospects for a large cotton crop are excellent. If the price is kept up as conditions indicate it will be, in the neighborhood of ten cents, they expect this year to have an unusual condition throughout the country seldom presented.

OUR SMALL SOUTH AMERICAN TRADE.

One of the most notable features of our trade with South America is its comparative fixity, writes United States Vice-Consul Handley, Trinidad, British West Indies. During the last thirty years there has been an increase of only 5 per cent. in our trade therewith, and the sales of 1890 were about the same as those of 1902. Compared with the trade of 1873, our 1902 trade with the world outside of South America has more than doubled. To the 40,000,000 people in South America our yearly sales amount to less than $40,000,000. This seems inexplicable, and is most inadequate and unsatisfactory. To Mexico, with her 13,500,000 people, we sell a little more than to all South America. We sold the Canadians last year a little less than $24 per capita, and to the Cubans, without any reciprocity, about $15 per capita. The total imports of all the South American countries approximate $350,000,000. Our share is a fraction more than 10 per cent. of their business, and this small proportion can not be ascribed to anything other than the lack of well-directed trade energy. We buy from them three times as much as we sell to them. We pay them about $120,000,000 a year for their products, and they use the difference of $80,000,000 in purchasing from our foreign competitors the goods with which we ought to balance our accounts with them. In other words, we supply them with funds which enable them to buy from other people things which we grow and manufacture From 1873 to 1902 our trade with Asia rose from $19,000,000 to $64,000,000; with Oceania, from $4,677,000 to $34,350,000; with Africa it increased from $3,500,000 to $33,500,000; and with our neighbors on the North American continent it has grown from $82,000,000 to $204,000,000. During those thirty years our vast trade with Europe has doubled, and our sales in that continent now exceed $1,000,000,000 a year. Of all of the world's divisions, our trade with South America drags the most.

Still South America grows in population, in the manifold wants of its people, and in the volume and value of its products. Of these products we are fairly liberal purchasers. We buy about one-fourth of all the exports. In the last thirty years we have purchased from South America $1,700,000,000 more than we have sold to it by direct exportation. Undoubtedly a good portion of American-made goods has found its way to South America through British, German, and French houses, which sold them and made a profit on them. But even granting that, there still remains much trade and a desirable profit which might have been secured by American merchants and manufacturers.

There are numerous explanations and reasons for our failure to secure more of this trade. There will first be urged the lack of shipping facilities. Canada has established a line to South Africa, and it would seem that the United States could find sufficient business for a line to the east coast of South America. A closer study of the people and their wants is most important. The German, French, and, in fact, nearly all the European houses make it a point to thoroughly study the wants of the people in the country to which they assign their agents. They do not endeavor to force on the South Americans an article which they desire to dispose of simply because they manufacture it and it can be sold at a large profit. On the contrary, these European houses often send their agents to the South American Republics to make a thorough study of what they use mostly, no matter if it is an article locally made and has never been seen outside of that particular country. They make a collection of samples of these articles, taking into account their local cost and selling price, and send them on to Germany, France, Italy, or wherever their headquarters may be, to ascertain if they can be made cheaper and as good. It often proves they can be manufactured for much less and better and sold in the very country in which they originated at a lower price than the local article.

The lack of sufficient knowledge of foreign languages is another disadvantage to our trade.

The German, French, or Italian agent in South America generally speaks at least three languages, whereas the American seems content with his own language and a "smattering" of one other. This may seem a minor detail in the building up of this trade, but the South American feels far better satisfied if his business is transacted in his native language. Lack of American banking facilities form another argument. Our trade with South America undoubtedly suffers for lack of American banks and large trading concerns. The two go together, for banking facilities are indispensable to foreign trade. An English or a German bank seeking foreign business can establish foreign branches wherever it sees fit.

AMERICAN BANK NEEDED.

An American national bank not being allowed to have a branch anywhere, our national banking system is unable to ex-

Digitized by Google

tend the facilities required by international commerce. The English and German trade in South America has the advantage of being sustained by banks whose branches cover the field. Credit at any point where the bank has a branch is available at any other point. Practically our American commerce depends upon English and German banking facilities, and London is growing to be the financial center for American as well as British foreign trade. If there were banking facilities for the present import and export commerce, it is probable that an increase in banking business would lead to an improvement in banking facilities. Long credits are customary and are generally granted by the European firms. The Americans object to this, and rightly so in some of the turbulent Republics where the stability of the government is a question. However, if our foreign competitor can prosper on such terms, I can not see the wisdom of adhering so closely to our short-credit system. Better good accounts on the books than idle goods on the shelf.

Our limited trade with South America can not be based on anything but the lack of trade energy. We may boast of our American goods in all corners of the earth, and the "hustling" qualities of our commercial men, but the fact remains that foreign trade is as yet only a small part in the commercial and industrial life of the American people. We sell $900,000,000 worth of food products annually, and principally for the reason that other people come to us to buy them because of their need of them. A large share of our $500,000,000 sales of manufactured articles may be laid to the same cause—the need of others for that which they know we have and which they need and can use. Notwithstanding the large volume of our exports, we are not yet a trade-hunting nation in fact—at least in South America. A due amount of well-directed and intelligent canvassing by men who speak the language would double our trade with South America in a very few years.

ADVANTAGES OF THE MECHANICAL TRADES.

It is one of the standing surprises of our social system that the advantages of the mechanical trades as a career seem to appeal to but a comparatively small proportion of American youths. Possibly the artificial barriers which have been erected by certain labor unions may deter some boys from seeking to enter those trades. But this is evidently not the only reason for their apparent unwillingness to engage in skilled manual labor. Those who are interested in manual training institutions complain very generally that parents, even of the poorest classes, often object to their children being taught to work with their hands, preferring that they should study along commercial lines, under the mistaken idea that there is not only more dignity in clerking and kindred occupations than in the practice of a handicraft, but also more money. Nothing could be wider of the mark, as regards the youth of average qualifications and surroundings. On the one hand, in taking up the *role* of a clerk, he enters a field which has always been and always will be overcrowded, while on the other, by learning a trade, he equips himself with an unfailing means of livelihood, for, in our rapidly growing country, there is room for an almost unlimited supply of good workmen. Possibly the young clerk may secure more wages to start with than does the young mechanic, but to nine out of ten clerks the day comes when, grown older, they find they have reached the limit of their opportunity without having secured even a competency, much less anything like a leading position in the community. But while the young tradesman may possibly have had to undergo the grind of hard work on a small income during the first few years of his career, he can, with diligence and persistence, secure for himself steady and well paying employment, with the prospect of early independence and a position, when he shall have reached the upper rungs of the ladder of his calling, such as a very small proportion of his clerking *confreres* can hope to aspire to. The pecuniary advantages of the skilled workman, whose moral and mental qualifications are sound, are infinitely superior to those attaching to the ordinary run of clerkships. But, above and beyond this, there is, when rightly considered, a dignity and a satisfaction in skilled manual labor which does not exist to the same degree in the occupations to which so many young Americans are devoting themselves because in them they can wear nice clothes and enjoy the luxury of clean hands and linen. It is unfortunate that such distorted views should exist among our American youths to-day, and those who shall endeavor to disabuse the mind of the rising generation of these false ideas will be conferring a real benefit upon them, as well as upon the public at large, for a skilled mechanic is a valuable citizen of any country. Doubtless the adage "there's always room at the top" holds true of every calling, but it is also true that the "room at the top" is apt to be much more spacious in the mechanical trades than in the general commercial field, in proportion to the number of candidates for its occupation.—*The Metal Worker, Plumber and Steam Fitter.*

CHICAGO NOTES.

It would be natural for an Eastern Hardware merchant to look with wonder on the great jobbing concerns in Chicago, St. Louis and Duluth. The rapid settlement and building up of the West has made these great Western wholesale houses what they are. The same conditions have not existed in the East, and have not made it possible there to build up such great concerns as exist here.

General Hardware from Chicago is now being shipped into all parts of the United States, into Mexico and South America. And as years go on, Chicago will undoubtedly become still more of a Hardware center. This is being brought about by new, young, progressive jobbing concerns coming into the field.

In the forerank of these younger Hardware houses is the Trout Hardware Co., located at 172-174 Lake Street. Geo. W. Trout, who is recognized as one of the best posted Hardwaremen of the West, is president. Mr. Trout gives the business close personal attention. S. B. Wilbur is secretary, and is a close second to Mr. Trout in the Hardware line. All the officers as well as the directors are young, energetic, wideawake business men. The Trout Hardware Co. is capitalized at nearly a quarter of a million dollars, and with every facility for the handling of business are constantly reaching out into new fields and enlarging their trade. Seventeen salesmen represent the concern on the road and cover the Western Central States from Montana to Indian Territory, including the Dakotas, Nebraska. A new up-to-date complete 1300 page general Hardware catalogue brings business from many places where the firm's salesmen do not travel. This catalogue is shipped by express paid to any Hardware dealer interested. The Trout Hardware Co. make a special effort to promptly ship all orders—especially mail orders, having this branch of their business splendidly organized—and each order is given personal attention. When asked what was the outlook for Fall trade, Mr. Trout said: "I can see no reason why Fall and Winter business should not be good. Our Summer trade is ahead of last year, and our future shipment orders are larger than a year ago." Mr. Wilbur explained somewhat to your correspondent why it is that the business of the Trout Hardware Co. had grown so rapidly. "We positively ship orders the day they come in. These are given personal attention by some member of the concern. If we are out of any goods on an order, we get them in time to fill order complete and have it go that day, if the goods can be procured in Chicago." This in a measure explains the success of the Trout Hardware Co., and the rest is easily explained when one knows the men who are behind the concern. Many new lines are being added, and during the past twelve months a complete stock of sporting goods has been put in. This department is in charge of T. J. Bowler, who for many years successfully sold this line through the Northwest.

No small amount of new building is taking place in Chicago, and this is making a good local demand for builders' material and tools. This trade is closely looked after by Bullard & Gormley Co., of 72 Randolph Street, which concern do a large retail trade.

One of Chicago's most attractive and best arranged general Hardware stores is that of Orr & Lockett Hardware Co., 71-73 Randolph Street. The large double store occupied by this concern is stocked to the roof, and throughout the store the arrangement is so well made that goods are always in sight. The Builders' Hardware department is especially well arranged and a very large line of high-grade fittings are carried. The Orr & Lockett Hardware Co. make a feature of their window display, and in July had a very attractive display of carpenters' and gardeners' tools.

At the big warehouse of Hibbard, Spencer, Bartlett & Co. there was an air of activity that spoke well for the prosperity of the Western Hardware trade.

The Wells & Nellegar Co. reported a good trade and said that the outlook was better than a year ago.

In speaking of local business one Chicago Hardwareman said: "The big strike will have some effect on local business, but in some lines of trade will increase business. This is true of sporting goods—fishing tackle will be in more demand, and many strikers will take the opportunity of going hunting. Among the butchers and better paid employees there are many who own their homes, and these will take the time now to do a little fixing up around the house, and thus will be made a demand for some kinds of Hardware."

All things considered, the Chicago trade is apparently in a good condition and with good crops in the West, 1904-5 ought to be banner years.

HAMMERNAIL.

TRADE MARKS IN FOREIGN COUNTRIES.

Many American merchants and manufacturers who are doing an export business seem to think that it is not worth while registering their trade marks in foreign countries until the value of their foreign trade is considerable and the purchasing public abroad has been impressed with their identifying mark. There is grave danger in this delay. They probably do not know that in many foreign countries the absolute title to a trade mark is obtained by the first applicant for registration, and that subsequent applicants will be refused registration. When an American merchant or manufacturer postpones the registering of his trade mark until such time as he deems his foreign trade worth protecting, he is running a serious risk of finding that some other person or firm has previously registered his mark, and that he has lost title thereto, and, of course, is liable to suits for infringement. It will make no difference how long he has used the mark in the United States, or how much money he has spent in advertising his goods and creating a demand for them. This will all innure to the benefit of the first registrant abroad.

A recent decision of the Imperial Court, the highest judicial tribunal of Germany, emphasizes this fact.. Briefly, the facts in the case are, that the California Fig Syrup Co. had been selling its product in Germany through a German merchant. This merchant, without the knowledge of the American company, registered its trade mark. When the American company learned of this it demanded that the title to the trade mark be transferred to it. This is what the German pirate was expecting, for he promptly demanded twelve thousand dollars for the German rights. The American company refused to be blackmailed and immediately brought suit to have the registration cancelled on the ground of fraud on the part of the German registrant. The case was carried on appeal to the highest court of Germany with the result that the registration was upheld and the American company deprived absolutely of its title to the trade mark. If it desires to sell its product in Germany it can do so only with the consent of the owner of the trade mark, and one can imagine that that consent will be a pretty expensive thing for the American company to obtain.

There is another reason why American merchants seeking to develop their foreign trade should register their trade marks in foreign countries, and that is, *to make sure that they are not using a trade mark previously registered by another.* It is not an unusual thing for manufacturers in the same line of industry in various countries to adopt substantially the same mark for their goods. It has occurred in our practice very recently that an American manufacturer's trade marks were refused registration in Germany and England because of prior registrations of almost the identical marks in those countries by resident manufacturers. We were able to ascertain that there was no piracy of our client's trade marks, the three manufacturers having, by a singular coincidence, selected the same arbitrary words as their trade marks. This experience, while disappointing and surprising to our client, enables him to avoid being sued for infringement by the resident manufacturers. And further it saved him the expense of building up a trade under those marks for the other fellow to reap the benefit of. Manufacturers should, therefore, register their marks, not only to prevent others pirating them, but also, to make sure that they are not infringing on the trade mark rights of resident manufacturers and merchants. These remarks apply to most of the foreign countries having trade mark laws.

Davis & Davis.

AGRICULTURAL IMPLEMENTS IN DEMAND.

The Argentine Republic has purchased a large quantity of agricultural implements in the United States in the current year and the orders are gradually increasing. Within the last few days Adopho Mantels, of Buenos Ayres, has placed an order for riding ploughs, valued at $40,000, which is the largest export order ever received for these ploughs. Purchases of sewing machines and other improved implements have been especially heavy. The growth of this commerce has caused the manufacturers in the United States to give this trade more attention. The manufacturers here have an advantage in competing for this trade over their competitors from other countries, in that the implements produced here are more modern and generally of a better grade. Many manufacturers have made extensions and improvements in their plants which will enable them to fill foreign orders much more promptly than they have hitherto. The fact that they have been overrun with domestic orders caused the comparative neglect of the export trade.

A gentleman never forgets the respect due to advanced age.

DEATH OF THOMAS W. MUNROE.

The friends, in both the business and social circles of Thomas W. Munroe, have been severely shocked in the knowledge of his tragic death by shooting himself on July 25, at his home in Brooklyn.

Since 1895 he has been the secretary and manager of the Allerton-Clark Company, New York, which position he has filled creditably and efficiently until the day of his sad death. It is generally believed that the cause of his rash act was due to overmental strain induced by real or imaginary business worries, augmented recently by the critical illness of a favorite daughter, threatened with appendicitis, and with whom he had watched day and night.

THOMAS W. MUNROE.

Those who have known him intimately now recall changes at times in his demeanor that at the time were thought of no consequence, but in the light of the present occurrence would cause the inference of inherited tendency, especially as it is remembered that his aged father died of melancholia.

Thomas W. Munroe was the son of Richard Munroe, who for over thirty years was a valued and trusted employee of A. T. Stewart, and a legatee by the great merchant's will for long and faithful service. He was born in New York, January 22, 1854, not far from Stuyvesant square, and was educated at Public School No. 35, the school noted for having graduated so many prominent New Yorkers, now leaders in its mercantile, financial, judicial and governmental affairs, the alumni of which organized in 1897 the Thomas Hunter Association, in honor of their respected principal.

Mr. Munroe began his business life with Theodore W. Mace, at 116 Chambers' street, manufacturers' representative in mechanics' tools. From there he went to Hart, Bliven & Mead Mfg. Company, about July 1, 1870, remaining with the house until it went out of business in 1878, when he entered the employ of Thomas Chalmers, for whom he was head traveling salesman for five years. Having married while with the latter house, he grew tired of traveling and went with C. F. Guyon, a former fellow clerk in Hart, Bliven & Mead, and who then represented the Reading Hardware Company in New York. On the organization of the C. F. Guyon Company, after the Reading Hardware Company established its own branch here, Mr. Munroe became its secretary. With the failure of the Guyon Company in the panic of 1895 he became the secretary and manager of the newly organized Allerton-Clarke Company, where he remained until his decease.

Mr. Munroe was a man of domestic habits, taking great pride in his home and family, which was a happy one. As a citizen he was a man above reproach, refined, cultured and with a ready sympathy that no one sought in vain. His sad death will not soon be forgotten by hosts of warm friends and acquaintances. He was not a club member but was always proud of the fact that he was a veteran of Company G, Twenty-third Regiment, N. Y. N. G. He was also a member of Doric Lodge F. and A. M. He is survived by a widow and two daughters.

RECENT TRADE PUBLICATIONS.

JOSEPH RODGERS & SONS, LTD., No. 6 Norfolk Street, Sheffield, England, with Alfred Field & Co., 93 Chambers Street, New York, as sole agents in the United States, have issued a handsome catalogue of 46 pages, exploiting and fully illustrating cutlery of their manufacture, which they claim is the "highest grade cutlery ever made." They have sent 15,000 copies of this catalogue to the trade to enable dealers to make proper selections of the Rodgers goods for their trade, which heretofore has been difficult for the dealers to accomplish. For a long time past Joseph Rodgers & Sons have found that consumers of cutlery have experienced a difficulty in obtaining what they want of goods made by them. This has been evidenced by the large number of enquiries reaching them from private individuals, demonstrating that they are not successful in obtaining from their local merchants the patterns they desire. If the retailer will indicate to his jobber the patterns and goods he wants, the jobber will very likely give him all information and furnish him promptly with the goods.

HANSON BROTHERS, 20 West Randolph Street, Chicago, Ill., manufacturers of Improved Spring Scales and Hardware specialties, have issued a neatly arranged pamphlet catalogue which folds to envelope size, devoted entirely to scales of their manufacture. The construction of their U. S. Family Scale, of which they give illustrations, enables them to remove the steel post which makes the scale absolutely unbreakable, also protects the weighing mechanism in handling and shipping. No other scale has this removable steel post, which has been pronounced by leading dealers to be a quick seller. The following features adopted in their scales distinguish them as superior in perfection of construction and practical results in use: The removable steel post, insuring perfect condition of the scale upon delivery; the scale boxes are pressed from one solid piece of No. 20 cold rolled drawing steel, making the scale absolutely correct at all weights and shows no variation; a solid aluminum dial with the pounds and ounces pressed deep in the metal which will never tarnish and the graduation lines cannot be rubbed off; handmade oil-tempered springs made from the best cast steel wire (oil-tempered springs will always go back to the starting line); it has a flat bottom which will protect the weighing mechanism. In case of overloading, the surplus weight will rest on bottom of scale. The book may be had upon request.

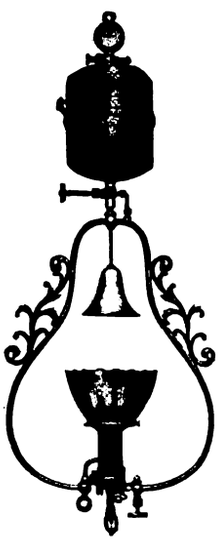
THE J. STEVENS ARMS & TOOL CO., Chicopee Falls, Mass., are distributing an envelope-size pamphlet abridged catalogue embracing a line of their rifles and shotguns, and containing illustrations of fifteen of the same, the first cut being one of a Stevens-Maynard, Jr. Rifle No. 15 offered the trade in response to a large demand for a low-priced rifle, and at the same time a thoroughly accurate and reliable arm. Next is the "Stevens Crack-Shot" No. 16, which combines all the good features of any of the best rifles now on the market, guaranteed quality, finish, accuracy, style and stability, as well as compactness, and the company highly recommend it. Among the shotguns, they illustrate their single barrel No. 105, which has special "Electro" steel barrel, choke bored for nitro powder, drop forged and case hardened frame, top snap, low rebounding hammer, varnished walnut stock, with pistol grip, rubber butt plate, patent snap, walnut forearm and metal joint. Adapted for any standard make of shell, factory loaded with either black or smokeless powders. Send for booklet, which fully illustrates and describes all of the fifteen styles, as well as their shotgun cleaners, rifle cleaning rods, etc., etc.

THE WIRE GOODS COMPANY, Worcester, Mass., have issued an abstract from their No. 5 catalogue in the form of a pamphlet comprised of three large size circulars enclosed in one double circular which forms a cover. These exploit wire goods of their manufacture, including coat and hat hooks, hooks and eyes, wire mats and baskets, moulding hooks, spool wire, staples, wire chain, fruit pickers, ladder chain, dish washers, etc., etc. They make special mention of their wire counter display baskets, which are clean, strong and handsome in appearance. Dust cannot collect in these baskets, and they permit the quick cleaning of counter by removing the baskets (with the goods in them) and sweeping up the dust beneath. The Wire Goods Company manufacture everything made of wire, and suggest that you obtain a copy of their catalogue No. 5 for their full line of goods.

THE FORBES SILVER CO., Meriden, Conn., have recently issued their catalogue No. 9, which is a handsome edition, illustrating their extensive line of silver plated ware. It contains 116 pages and is enclosed in an extremely neat cover of dark green linen. The company direct particular attention to their many new designs in Applied, French Grey and Butler finishes, and other high grade ware. They also show a good assortment of the more moderate in price designs, the whole making a selection covering everything needed in the stock of the dealer selling silver plated ware. This catalogue supercedes all previous issues, and the company request that the old catalogue be destroyed, as it contains many designs they can no longer furnish. They can only furnish goods as listed, with no special finishes, designs or sizes. All goods bearing their trade mark are fully guaranteed by them.

THE UNION MANUFACTURING CO., New Britain, Conn., and 103 Chambers Street, New York, have distributed recently their new catalogue No. 4 devoted to the exploitation of their iron and wood bottom planes, spoke shaves, circular planes and the Union Adjustable Scraper. The company state that in presenting this catalogue they desire to call especial attention to the several additions and improvements which they have made to their line. They state it as their intention to add to this line as fast as possible, and to make it a complete line of tools. Modern methods of manufacture have been employed to perfect these goods, and the success with which they have met in the markets of the world is a testimonial of their merit. They have given in the above catalogue the list prices in United States money and also in sterling. This is done for the benefit of their foreign trade, but their invoices will be extended in United States money as in the past. Their catalogue is well gotten up and contains illustrations of all their goods. Send for one to the above address.

WYETH HARDWARE & MFG. CO., St. Joseph, Mo., have recently sent us one of their 1904-5 catalogues illustrating and describing their line of stoves and ranges. The first illustration is a cut of their Imperial Steel Range, for coal or wood, showing reservoir. These are made of Wood's best grade patent level cold rolled annealed steel; asbestos lined throughout; cemented cast plate over oven; cast plate securely anchored under oven to prevent warping, the oven being ventilated. It is japanned baked hard-finish and has a reversible duplex pull-out grate, which can be taken out without disturbing fire-box linings. All ranges are fitted with an extended fire-box for wood. The Imperial has a flush-top encased cast iron, enameled reservoir. The front top is ornamented with a handsome nickeled band, and has upright nickeled strips on corners, nickeled oven door, fire door, ash pit door, soot door, end brackets, name plates and all bands on high closet, and has side and front pouch feed doors. The catalogue includes illustrations of all their products, each one described in detail with different sizes of oven and top, weight and list prices given.



KAMPFE BROTHERS, 8-12 Reade Street, New York, have sent us a copy of their envelope-size catalogue which they are distributing, and which contains 41 pages devoted to the exploitation of their Genuine Star Safety Razor, which, they state, shaves clean and never pulls. The book is well illustrated and presents cuts and description as well as prices of the different sets which they put up. Included among others, is their No. 9, a traveling case, put up in an elegant satin-lined morocco case, and contains one Safety Frame with two perfectly adjusted blades of fine silver steel, box of finely perfumed shaving soap, holder for stropping and honing blades, shaving brush, comb and cosmetique, in fact, everything requisite for an easy, quick and luxurious shave. Their razor blades are forged of the highest grade of double refined English steel, and, they state, each blade speaks for itself. They are fully concave and tempered by a secret process of their own, which makes each blade a magnet in itself. Old blades can be reground and put in order at any time, and defective ones replaced by any of their agents. Send for pamphlet catalogue explaining in detail the merits of their Star Safety Razors.

LIGHTING AND HEATING APPLIANCES.

Thomas K. Ober & Co., 832 Drexel Building, Philadelphia, Pa., U. S. A. who are the export agents for the well-known Kitson Hydro-Carbon Heating and Incandescent Lighting Company, of that city, claim that this company operate the largest and most complete plant for the manufacture of kerosene burning lamps and apparatus in the world, and are thoroughly equipped to supply the large and increasing demands made upon them. Their large output enables them to furnish goods at the lowest market prices consistent with the best quality of workmanship. Their lamps are constructed to burn kerosene oil, which they recommend on account of its safety and economy, but they may, nevertheless, be adapted to burn gasolene, naphtha, alcohol or spirits, by attaching an air shutter which adjusts the lamp in a simple manner to burn these fluids.

These lamps are made in two forms; one the System and the other the Portable or Fount form. In the System form lamps, ordinary kerosene oil is placed in a steel tank, and a pressure is put upon it by means of a pump, and the oil is forced from the tank to the lamp through small tubes, no larger than electric light wires. The System form is recommended for permanent installations, as each lamp does not require filling, all the oil being placed in the tank and distributed to the lamps through the tubing. With the Portable or Fount style each lamp is furnished

HARP FIXTURE FOR INSIDE USE.

with a tank attached and is recommended for use in places where the light is not to be kept permanently in the same position.

All of the lamps manufactured by this concern are simple in construction and though made in two distinct styles, the principle of operation is precisely the same, the lamp consisting of an oil vaporizer and an air tube leading to and supporting the burner into which the vapor is injected and air drawn in through openings in the air tube. The gas thus formed burns within an incandescent mantle, creating a light of intense purity and brilliancy. The entire process of gasification is carried on in the lamp itself. The makers claim that the light is more diffusive, softer and more agreeable to the eyesight and is entirely free from the flickering and shadows attendant upon the arc electric lamp; colors, also, are as readily distinguished as by daylight, rendering the use of these lamps very desirable in all places where colored goods are made or offered for sale. It is claimed that the effective candle-power from the two-mantle lamp is greater, light per light, than from the improved arc light of nominal 2,000 candle power.

The manufacturers say that, recognizing the safety of this lighting system, the various boards of underwriters throughout the country have been unanimous in their approval of it and all installations are made without any increase whatsoever in the rate of insurance. The fact that this system uses kerosene oil, renders it safer and obviates the dangers caused by the use of gasolene or naphtha. One gallon of kerosene will burn in a 2,000 candle-power lamp for a space of 12 hours, and in a 1,000 candle-power lamp for twenty hours. The saving in the cost of operation over other systems of lighting renders this system exceedingly attractive to consumers, especially when economy of operation is combined with the greatest efficiency in illumination. All of these properties of the Kitson lights, render them exceptionally desirable for the lighting of stores, streets, factories, wharves, warehouses, etc. Forty thousand lamps are now in use throughout this and foreign countries in places of the above character, as well as in private parks, building operations, railway stations, yards, etc. Copies of testimonials will be furnished to all interested. The company wish to call especial attention to their street lighting outfits of 2,000 candle-power which are claimed to be the most improved appliances on the market for the lighting of streets, parks, private grounds, etc., and are largely used in the United States and foreign countries. Another specialty is the contractors' portable lamp, 2,000 candle-power, which has been designed and is admirably adapted for use in all cases where a light of high candle-power is desired by contractors, builders, street and steam railway companies, etc., on such work as street paving, track laying, trench digging, steam and street railway building or repairing, removing debris in burned or razed buildings, and for working in old and new buildings where no other form of light is available or satisfactory. Particular attention is directed to the low cost of production and high efficiency of the light. A consumption of one gallon of kerosene oil will give a light of 2,000 candle-power for 12 hours at a cost of about ten cents.

Correspondence is solicited and catalogues will be furnished to all interested. Address Messrs. Thomas K. Ober & Co., Export Agents, 832 Drexel Building, Philadelphia, Pa., U. S. A.

EASTERN TRADE NEWS.

(By Special Correspondent)

"Collections are slow"—this is the leading feature of trade in the East. Some dealers say that the reason money comes in so slowly is because farmers and others have not yet caught up with the season. That the very severe and long Winter so tied them up, that it will take another three months to wear off the bad results of those dull days.

Then, too, there is at present very little building taking place, and the usual mid-Summer dullness in most lines is about as in other years.

One of the few Eastern cities where the Hardware trade is booming is Schenectady, N. Y. Here there is an active demand for all building material—many new houses are being erected to fill the rapidly growing demand, caused by the constant enlargement in both the Locomotive and General Electric Works. Clark Witbeck, who is one of Schenectady's progressive Hardwaremen, in speaking of trade conditions, said: "Business is good—could not be much better; here we have two large works giving employment to over 17,000 men, and, of course, trade is bound to be good. My wholesale trade is also good—and that end of my business is growing just as rapidly as is the retail." When asked what the outlook for Fall trade was, Mr. Witbeck said: "Well, you know this is a Presidential year, and everyone knows what that means, but the outlook is better than in 1900 or in 1896." In addition to a general line of Hardware, Mr. Witbeck makes a specialty of fine mechanical machinists' tools and recently issued some very convincing circulars putting forth the merits of the B. & S. goods.

Another Schenectady concern carrying a very complete stock and doing a large retail trade is Teller & Stanton. This firm carry a full line of garden tools and were recently making a very attractive display of lawn mowers and garden hose.

In the retail store of the Albany Hardware and Iron Co., there was an air of activity which was also noted in the sporting goods branch across the street, operated by the same firm.

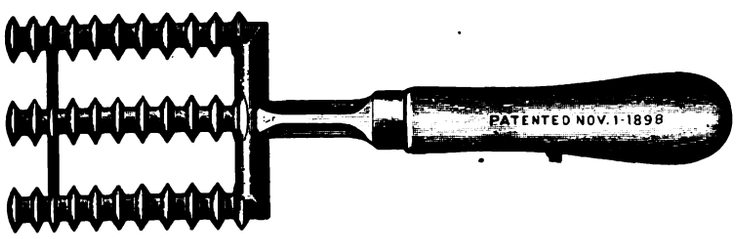
AROUND NEW YORK CITY.

R. Gray, Jr.'s store on Market Street, Newark, has an air of prosperity that speaks much as to the energy and ability of the proprietor. Both wholesale and retail business is carried on by R. Gray, Jr. in General Hardware.

Down at 198 Ferry Street, Lacmann Bros. are remodeling their Hardware store, and putting in a new plate glass front. Mr. Lacmann said that business was good, especially in the plumbing department, which is given special attention.

HAMMERNAIL.

STERLING.



How many folk who work every day in the year who use the phrase "pounds sterling," are aware of its origin? Probably not one in a thousand. Yet the adjective "sterling," which apart from its commercial sense has come to indicate worth and genuineness, has a curious historical significance, and is a distinct survival of the times when England did not weigh so heavily in the balance of power as she does now. In the fourteenth century the trade of the known world was, almost without exception, in the hands of the Hanseatic League. Within this league there were many towns, most of which coined money, some using better metal than others. Lubec, a Baltic city, made the best money, and the English merchants, who even then knew a good thing when they saw it, used to contract for payment in the "moneys of the Easterlings"—Easterlings being their name for the Baltic merchants. Shortened for convenience, the word still obtains, and has all its original force.—*Liverpool (Eng.) Post.*

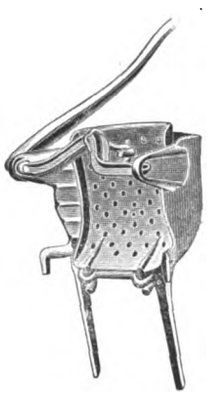
NEW GOODS AND SPECIALTIES.

THE "DAISY" STEAK POUNDER.

The Wagner Mfg. Co., Cedar Falls, Ia., are placing on the market a new pattern of steak pounder which possesses original features of excellence. We present an illustration of the same here-

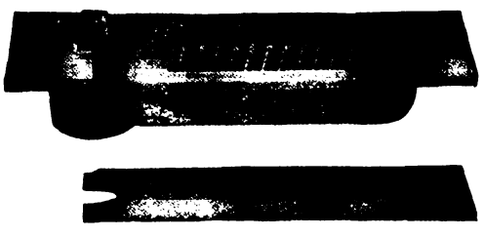


"DAISY" STEAK POUNDER.

with, which sufficiently indicates its general appearance. It is made of malleable iron and heavily tinned, having a length over all of 10½ inches, the three pounder arms being 3¾ inches long; included in its make-up are thirty three "disc" formations, the edges of which touch the steak at each blow of the pounder. The device is securely tanged in a wood handle with brass ferrule, the entire appliance weighing but 14 ounces.

THE GODDARD MOP PRESS.

C. A. Goddard, Akron, Ohio, is the patentee and sole manufacturer of the Goddard Mop Press, of which we present an illustration. It is made of malleable iron, the most unbreakable material from which such an appliance can be constructed, and differing from others now on the market is complete in only four pieces,

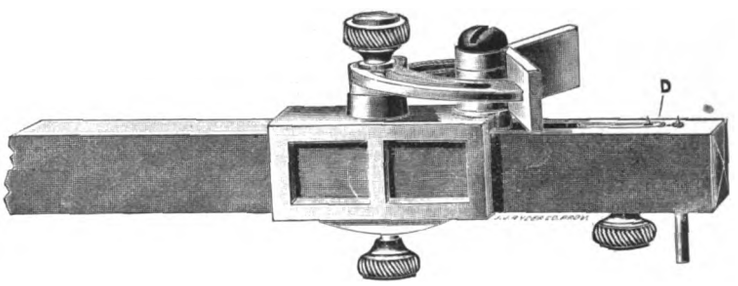


THE GODDARD MOP PRESS.

the body, follower, handle and connection rod. Two lugs on the follower fit in the holes in the body of press, making a hinge joint, and the two lugs on body of press, hook over bucket (or other receptacle) holding the press in place for its proper use. It is so constructed that when using it, you do not have to bend over it, and owing to the lock lever feature a little pressure on the handle suffices to wring the mop sufficiently dry. The press is made so it will fit any size of bucket. There are no screws or rivets used in its construction, thus avoiding the necessity for repairs.

COLUMBIAN FLOOR SPRING HINGE.

The floor spring hinge illustrated herewith is the product of the Columbian Hardware Company, Cleveland, Ohio. The hinge is ball bearing and is referred to as having exclusive features of application and construction. It is compact, occupying small space in the floor, particularly in depth. The tension may be regulated at any time without disturbing either the hinge or door, and it is also made so that the door may be put in place or entirely removed without a moment's time without interfering with or removing a single part of the hinge. It is also pointed out



COLUMBIAN FLOOR SPRING HINGE.

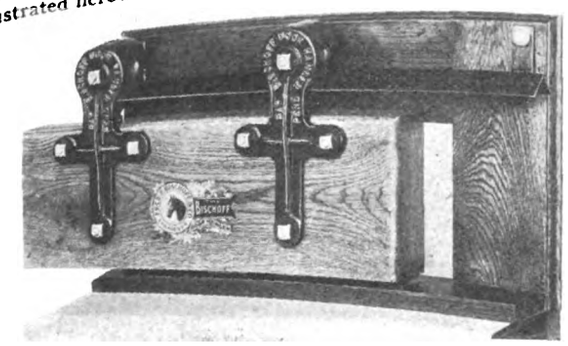
that it is noiseless and protected against dirt or moisture. The absence of a multiplicity of intricate parts and the peculiar action of the spring are especially alluded to by the company, which makes the hinges in four sizes to suit doors of various dimensions.

WINSLOW'S ADJUSTABLE GAUGE.

We illustrate herewith Winslow's Adjustable Face Marking Gauge, manufactured by the Mossberg Wrench Co., Central Falls, R. I. One of the main points of merit in this gauge is the ease with which it is adjusted. To set the gauge for curved work it is only necessary to loosen the thumb screw at under side of gauge, press the gauge face against the edge of the work to be gauged so that it accommodates itself to the work, and then tighten the thumbscrew again. For straight work the gauge is set in the same manner, adjusting the gauge face to a straight edge and at right angles to the gauge bar. Double line gauging is accomplished by means of a shiftable marker, carried on a sliding plate.

WINSLOW'S ADJUSTABLE GAUGE.

This sliding plate is mounted in a slot in the gauge bar and is adjusted and secured in position by means of a thumb screw, handily located on top of the bar. When necessary, the adjustable plate and marker can be readily removed. A welcome feature of Winslow's Gauge is the absence of the bulky block which on other gauges surrounds the bar and obstructs the hand in using the gauge. The face is adjusted to and from the marking points by means of thumbscrew on top of the sleeve, inside of which and bearing on the bar, is a flat spring which holds the sleeve frictionally and prevents it from sliding from the bar where the thumbscrew is loosened. The gauge is furnished with a rosewood bar of first quality, and all metal parts are heavily nickeled and highly polished.



ELECTRICITY AS A HANDY HOUSE SERVANT.

In the United States no up-to-date home is now complete without electricity, and the number of uses to which it can be put is increasing every month. It makes a most valuable and handy house servant. For instance, you can have not only electric light, but an electric stove to warm the house and an electric fan to make it cool. There are electrically heated flat-irons, curling-irons, chafing-dishes, griddles, toasters, cereal boilers and coffee urns. The expense in using these is not more than three-quarters of a cent an hour. An electric "hot-wire" bag has lately come into use, to take the place of hot-water bags. Tiny motors, a foot high, are being used to run sewing-machines, so that even an invalid can operate a machine. Electrically heated dumb-waiters are to be used in a couple of hotels now being built in New York City, and there seems to be no limit to the usefulness of the mysterious power which will interest scientists and inventors for years to come.—*Exchange.*

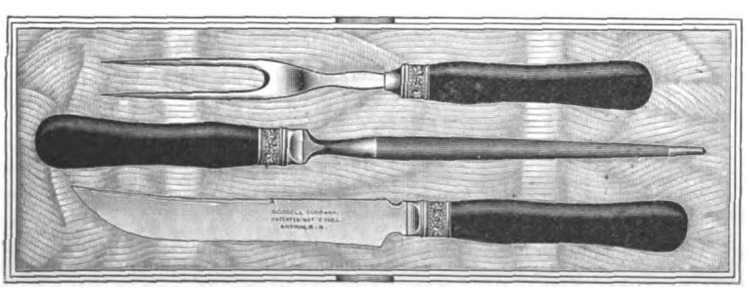
THE BISCHOFF HANGER.

Bischoff & Co., Chicago, are offering to the retail trade a proposition in connection with their door hanger, especially remarkable for its fairness to the dealer, and which is already resulting in a very material increase in sales. The Bischoff Hanger, which is illustrated herewith, possesses many strong talking points, making



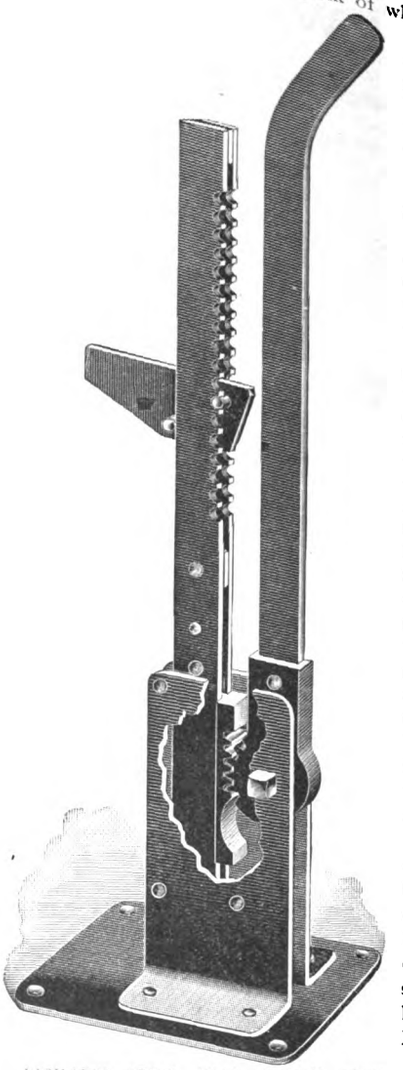
it a ready seller, even without the assistance given by its manufacturers. It sells at retail at $1.25 per pair and the track at 10 cents per foot. With each order for one dozen pairs is sent free of cost a handsome display hanger, full size, with metal parts triple enameled and the wood piano finished. Its handsome appearance and the case with which, by its assistance, the strong features of the machine are pointed out, almost invariably insures a sale where the prospective customer is at all interested. A strong feature of the Bischoff proposition of interest to the retailer is the fact that these goods are shipped with the privilege of being returned at the end of thirty days if not sold, all expenses of shipping both ways being paid by the manufacturers.

NEW USE FOR ALUMINUM.

According to *La Metallurgic*, at a recent meeting of the "Societe d'Encouragement pour l'Industre National," an interesting paper was read on the substitution of aluminum for wood in the machinery of spinning mills. In the textile industries—spinning, dyeing, and silk weaving, among others—a wooden bobbin is generally used. This is cheap and easily worked, but it has many drawbacks. Being very hygrometric, it suffers from variations of temperature; this accounts for the fact that in spinning factories where the atmosphere is full of humidity the bobbins revolve irregularly, causing jerks which slacken the speed and occasion the threads to break. The result is waste of stuff and loss of time in joining the threads again. It has been proposed to substitute aluminum for wood. Bobbins made of this metal revolve in any temperature and any degree of humidity; their relative lightness (five aluminum bobbins weigh no more than two wooden ones) allows the machines carrying them to move more quickly, or an equal speed may be obtained at less expense of motive power; finally, the smaller volume of the bobbins diminishes the cost of transport It was stated that several firms had adopted the use of aluminum bobbins and had found that they possessed many advantages.

GOODELL STEAK OR BIRD CARVER.

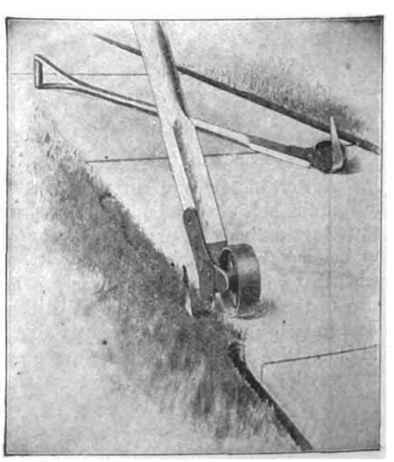
We present herewith an illustration of a set of Steak or Bird Carving Knife and Fork, with appropriate steel, one of the most popular additions recently made to the fine line of cutlery specialties associated with the name of Goodell Company, Antrim,



GOODELL STEAK OR BIRD CARVER.

N. H. The demand for small carvers has been growing faster lately than for the larger sizes, so this set was placed on the market for the first time this season and has proved immensely popular. The newly designed blade is of the best carver steel, is 5 inches long, the fork and ornamental trimmings are nickel plated; the steel is well proportioned, and cut with the famous new process, which surpasses any previous method of forming the proper surface for making a cutting edge. The handles are of ebony, and the whole set is packed attractively in a satin lined display box.

RICHARDS TIGER STEEL WAGON JACK.

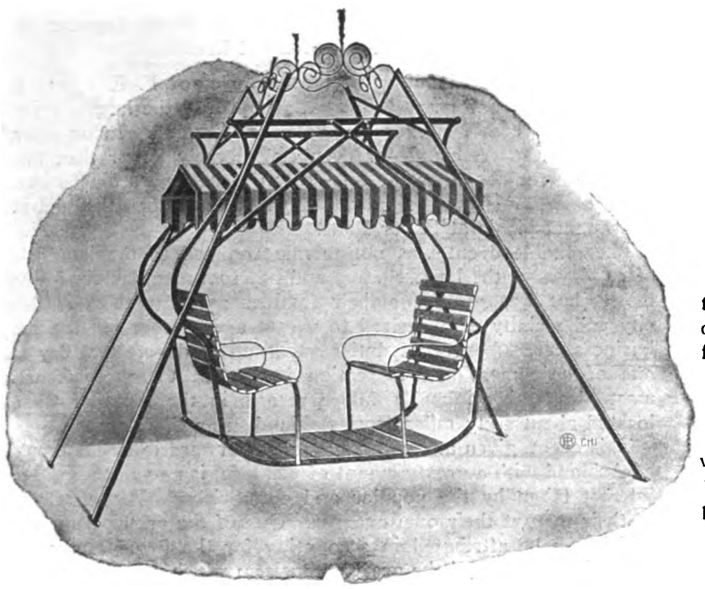


The Richards Mfg. Co., Aurora, Ill., are manufacturers of the Richards Tiger Steel Wagon Jack of which we give an illustration. This jack locks automatically. It is a powerful jack, operated by pinion and lever, and is so constructed, it is claimed, that the greatest possible leverage is obtained. when the load is lifted and the handle is down the jack becomes locked and holds the load in position until the lever is raised. The capacity of this jack is 1,200 pounds. It is packed in dozen lots and weighs 130 lbs. This company are large manufacturers of Hardware specialties, among which are such leaders as Richards Palace ball bearing house door hanger, Richards royal ball bearing trolley house door hanger, Richards parallel tracks, trolley tracks and hangers, especially adapted for movable partitions and continuous doors for freight houses, warehouses, an improved fire door fixture for closing doors automatically in case of fire, Richards Tramp door latch made of malleable iron, reversible for right or left doors, Richards Bull Dog steel door latch for heavy swinging doors, also a line of ball bearing Noiseless Store Ladders.

RICHARDS STEEL TIGER WAGON JACK.

WEMPLE'S TRENCH CUTTER.

Orr & Lockett Hardware Co., Chicago, Ill., are introducing to the Hardware trade the Wemple Trench Cutter, a new and patented tool for edging lawns. It is simple in its construction, easy in operation, and a saver of valuable time. It is a desirable tool to have where cement sidewalks are in vogue, as may be judged from the cut herewith; the operator pushes the tool along



WEMPLE'S TRENCH CUTTER.

the edge of the cement sidewalk, when a "U" shaped knife attached to the tool cuts a trench two inches wide and two inches deep, without even the inconvenience of bending over while at his work. In this way the lawns are trimmed evenly and by a little attention, unsightly, scraggly grass is prevented from presenting a careless edge. The tool is designed to be marketed at a moderate price and should meet with a wide distribution if given publicity.

THE EAGLE LAWN SWING.

The Eagle Lawn Swing, manufactured by A. Buch's Sons, Elizabethtown, Pa., possesses several good features not to be found in any other article of this kind. The Eagle Swing, which we illustrate herewith, is constructed of special high carboned steel, excepting the slats in the seat and platform, which are of hardwood lumber of the best material, and which, it is claimed, will last for years. The platform extends the full length, thus acting as a guard and as a further preventive of accidents. The swing has no shearing points. One of the best features of this swing is its pleasing motion. The chairs keep one position irrespective

EAGLE LAWN SWING.

of the swinging and rise and fall movement. The tilting movement usual in other swings and so productive of accidents has been entirely eliminated. The swing is shipped in two parts, and is so put together that it can be put up without instructions in five minutes' time, can be taken down in less time and stored in a very small space. The complete swing includes a long canopy made of the best material and thoroughly bound with braid, and ornamented scroll work at the top Special scroll work can be obtained at an additional cost, and also shades for the sides. An extra heavy swing is made on the same general design for public parks, etc. The selling price of the Eagle Swing is, of course, higher than that obtained for wood swings, but it has been found that buyers almost invariably are willing to pay the difference to get an article so evidently superior.

THE X-RADIUM FOOT WARMER.

Among the many successful specialties that are being marketed through the Hardware trade by the Novelty Manufacturing Company, Jackson, Mich., the X-Radium Foot Warmer which we illustrate herewith deserves close attention. It is shown in Fig. 1 in its complete form. This is an exceedingly useful and popular article and will no doubt be in large demand the coming fall and winter.

It consists of two parts and the heating pad of stamped steel is shown in figure 2. This is filled with X-Radium, a substance that

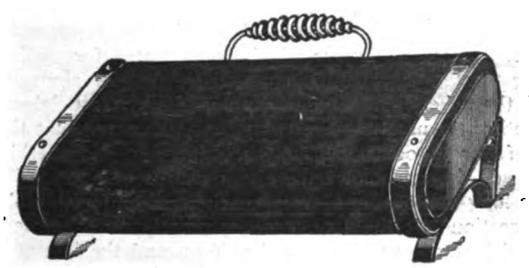

FIG. 1.—THE X-RADIUM FOOR WARMER.

has a wonderful power for absorbing and holding heat. The second part, as shown in figure 3 is a stamped steel receiver covered with plush, in which the heating pad is placed and which serves as a foot rest. The whole is handsomely nickel-plated and polished and is 10 inches long, 6½ inches wide and four inches high. All that is necessary to prepare it for use is to place the pad on top of a hot stove for twenty minutes and then put it in the foot rest. It absorbs heat in that time which it retains for two or three hours, and makes a most comfortable adjunct for a sleigh or car-

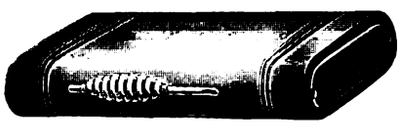

FIG. 2.—INNER SHELL.

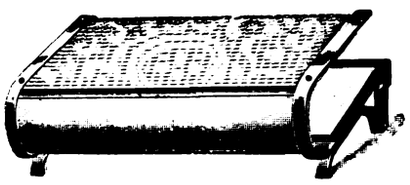
riage on a cold day. Through its use all danger of fire is avoided and the same results exactly secured. Those who have occasion



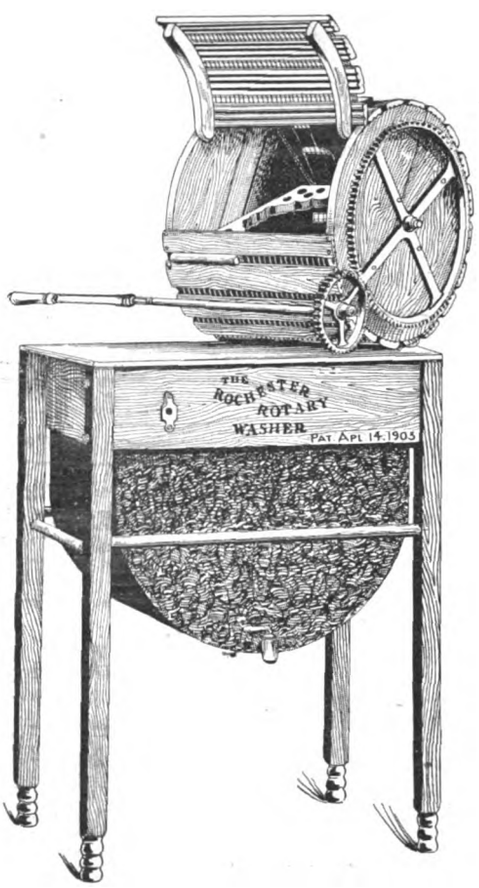


FIG. 3.—STAMPED STEEL RECEIVER.

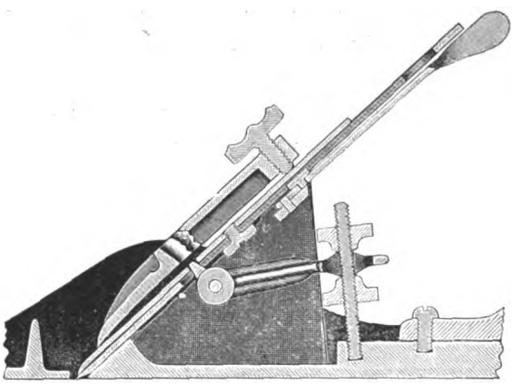
to ride frequently during the winter will find this a desirable addition to their usual equipment. Few things can be relied upon to furnish so much comfort.

ROCHESTER ROTARY WASHER.

The Rochester Rotary Washer, which we illustrate herewith, was patented by D. W. Hawley and George P. Bortle, April 14th, 1903. The machine is composed of a drum made of Tennessee poplar, being 20 inches in diameter, having twenty 2½ by 17-inch

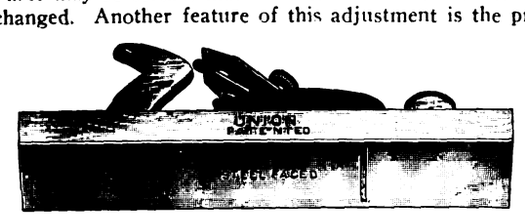
THE ROCHESTER ROTARY WASHER.



corrugated staves, nineteen 1⅛ by 16-inch zinc pieces with twelve ⅝-inch holes in each one, allowing the water and soap-suds to circulate freely through the clothing. There are two wings at right angles to each other, one on each head of the drum. The wings keep the clothes in motion from one side to the other, forcing them to rub on the corrugated staves; they also keep the clothes from becoming knotted together. The drum runs one way all the time, no reverse motion being necessary, a feature the manufacturer claims that no other machine possesses. The washer works well with any kind of power. The drum revolves about forty times per minute, and turns easily, there being one seventeen-inch

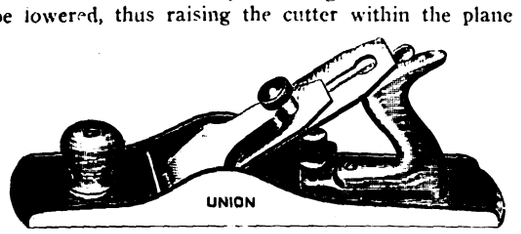
Digitized by Google

gear on the head of the drum, one seven-inch gear on a ⅝-inch steel shaft, with 9-inch crank, giving a good leverage. The drum has an 11 by 17-inch cover which gives ample space to put in and take out the clothes. There is nothing but wood in the construction of the drum, no iron to stain the clothes. The box is 20 by 24 inches by 6⅛ inches deep, with a galvanized steel tank 16 inches deep, with a good faucet, four maple legs, tight cover to keep in all the steam. The washer should last for years if well taken care of. This machine is now being manufactured by George P. Bortle, Rochester, N. Y.



AN IMPROVEMENT IN PLANES.

In their catalogue No. 4, which has recently been sent to the trade, the Union Manufacturing Co., New Britain, Conn., devote considerable space to a description of The New Union Locking Lever Adjustment. They say, in part, as follows: "In presenting this new adjustment, we are confident that we have the best that has yet been designed by any plane manufacturer. While it is somewhat of a departure from the accepted ideas of plane adjustments, it is the result of careful study of the requirements of users of tools, and is in every point an improvement over the old. It has been thoroughly tested by competent mechanics and expert tool men, to determine its strength and holding power, and all unite in praising it highly.



NEW UNION LOCKING ADJUSTMENT.

We have discarded the movable frog, and the cutter seat is made a part of the body of the plane. This gives a firm seat for the cutter at all times, which cannot become loosened or displaced under any conditions. This solid seat, combined with our extra heavy cutter, gives a plane that will stand any test. The cutter is raised or lowered by means of a lever, which is positive, a decided advantage over the screw adjustment commonly used. There is no loss of motion, the cutter responding to the slightest movement of the lever. This lever at its outer end is clamped by two brass nuts, which hold it securely in position. The cutter being set as desired, the lever is solidly clamped by the nuts, making it impossible for the cutter to be displaced. This locking device is one of the strong points of this adjustment, as the user may be certain that the cutter once set will remain so until changed. Another feature of this adjustment is the protection which may be given to the cutter when not in use. When the plane is to be laid aside, by loosening the lower nut, the lever may be lowered, thus raising the cutter within the plane body.

UNION WOOD PLANE.

UNION IRON PLANE.

The edge of the cutter is thus protected, and cannot be damaged by handling, while, the upper nut remaining in the same position, when the plane is again used the cutter is brought to exactly the same place. The cutter is firmly held in place by an iron cap, which slides under two lugs in the side walls, the proper leverage being obtained by a large brass screw at its upper end. In this way absolute rigidity of the cutter is obtained."

In the new catalogue are also shown the Union Adjustable Wood Planes, iron top and steel face, and the Union Iron Planes, both of which are illustrated herewith.

The catalogue is very conveniently arranged, especially as regards the size and prices, the latter being given in both dollars and sterling.

F. E. MYERS AND BROS.' ANNUAL OUTING.

Employers and Employes of Great Plant Work Together to Produce the Most Pleasant Result.

The fourth annual outing of the employes of F. E. Myers & Bros. occurred Saturday, July 23d., and proved the largest event of its kind which has ever originated in Ashland. In no other city the size of Ashland—or even considerably larger than this city—have the people so far this season turned out from factory, store, office, and home to enjoy a day's pleasure than they did at this annual picnic at Silver Lake.

The notable event was not merely confined to the hundreds of employes of the largest pump and hay tool manufactory in the world, but was given for their families and all others in this city and vicinity who desired to vacate a day from regular toil, business cares, household duties, etc., and to devote that day to one of enjoyment and recreation in one of the prettiest and most pleasurable inland summer resorts in the State of Ohio, located about sixty miles from Ashland, near Cleveland.

This event, given annually and looked forward to by the people of Ashland with a great amount of pleasure, is an evidence of the interest taken by the popular and enterprising Myers Brother in their men at their own expense. One of the principal reasons which can be attributed in accounting for the immense turnout of the employes, and the great enthusiasm which prevailed among everybody who took advantage of the low rate of fare arranged for, is the satisfaction the men find in the fair treatment they receive at the hands of their employers. This fact has been apparent and long since appreciated. It is the kindly personal interest which the Myers Brothers entertain in their men that there has never been a serious strike on at Ashland's biggest manufacturing plant. The amicable and good feeling which exists between employers and employes is very marked and has been the source of much favorable comment ever since this factory started to grow from a small plant to one of considerable magnitude.

Besides the employes of this local plant, hundreds of other people in this city and the surrounding country—and even from Mansfield and other nearby places—join in this outing every season. The attendance this year, however, exceeded expectations, and the picnic proved, indeed, a most gratifying and remarkable success in all its details and in every particular. Everybody had a grand, good time, and returned more or less fatigued to their homes at a reasonble hour Saturday night, feeling that they had enjoyed to the fullest measure the day of their lives. If there are any persons who failed to have a delightful time, they have themselves to blame for such delinquency, for it was there for all—married people, single folk and children alike.

While a great part of the people were at Silver Lake enjoying the picnic, the streets of Ashland seemed deserted and at times the city had an exaggerated Sabbath appearance. The weather could not have been more perfect for such a picnic than it was during the whole of Saturday. The early morn dawned clear and bright, and before the day had progressed far into the morning Old Sol was at his best. But while the sun was hot, there prevailed a cooling breeze which compensated for the hot rays.

The total number of tickets sold in the city alone was 2,356. With the tickets purchased at Nankin, Polk, West Salem, Creston and other towns along the route, it is estimated that the gathering of people occasioned by the Myers' picnic at Silver Lake increased the attendance there to upwards of 2,700. There were three long sections, and every coach was comfortably filled. The first section left the Erie depot promptly on scheduled time at 6.30 o'clock a. m.; the second at 6.45, and the last at 7 o'clock. The trip to the destination was delightful and it was so arranged that the trains arrived there almost at the same time. As the people unloaded they went direct for their lunch baskets, which had been well taken care of in the baggage car ahead. Nearly all the families and parties of friends and relatives took their dinners to the park, and many of them "fetched" enough good things along for their supper.

There were not benches enough, however, to accommodate all the picknickers and quite a number were obliged to spread lunches on the grounds.

Digitized by Google

It was found that there were plenty of diversions to monopolize every one's time, and most of the people were constantly on the go, making themselves a tired and weary lot of mortals when it became time to get aboard the train for home.

Among the amusements indulged in by the Ashland delegation at the park were: Viewing the menagerie, taking rides on the toboggan, merry-go-rounds and the like, ring pitching for canes and knives, knocking the baby down, bathing, dancing, witnessing ball games, athletic sports and other things too numerous to mention.

The train service was remarkably good and the Erie Railway Company and the promoters of the excursion are to be commended on the excellent manner in which the big gathering was transported to and from their destination. The three trains left Ashland and arrived at Silver Lake at a good time and the same may be said of their return home.

There were a good many tired people in Ashland on Sunday by reason of the good time they had while at Silver Lake, enjoying the annual Myers' outing. Many, in consequence, missed church in the morning, but made up for that omission by attending both the young people's union services and the union church services at the opera house in the evening.

F. E. and P. A. Myers, with their families, after enjoying the day with their guests at the Silver Lake Park, went to Akron, from whence they proceeded to their summer home at Mullet Lake, Mich. The Myers brothers had set Saturday as the date to go to Michigan, but they were so interested in the success of the picnic that they decided to remain over and indulge in the festivities in common with the others.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED JULY 26, 1904.

367,022. FLOUR OR MEAL SIFTER. H. S. Brewington, Baltimore, Md.
367,044. MOP HEAD. C. C. Johnson, Springfield, Vt.
367,045. MOP. C. C. Johnson, Springfield, Vt.
367,048. COMBINATION PADLOCK. E Kauffeld, Pittsburg, Pa.
367,060. DOOR CHECK. H. F. Price, Fort Worth, Texas.
367,100. SASH CORD FASTENER. C. Kerby, Dayton, O.
367,131. DIE FOR FORMING AXES, ETC. J. W. Bowers, Franklin, Mass.
367,146. SAFETY LATCH FOR DOORS, ETC. J. Kaufmann, New York, N. Y.
367,263. HANDLE FOR TEA KETTLES, ETC. A. Bayley, Newark, N. J.
367,342. CAN HOLDER AND DRIP PAN. J. A. Hard, Denver Col.

PATENTS ISSUED JULY 26, 1904.

765,658. DOOR SECURER. Ernst Beseler, Crefeld, Germany.
765,703. FLY SCREEN. Clyde N. Friz, Baltimore, Md.
765,730. CASE FOR FISHING TACKLE. Chester R. Hoag, Newark, N. J.
765,792. COMBINED STEP LADDER AND IRONING BOARD. Jno. B. Rohrer, Philadelphia, Pa.
765,844. METAL WEATHER STRIP. Hugh E. Kenny, Detroit, Mich.
765,878. SHADE HOLDING DEVICE. Edward T. Burroughs, Portland, Me.
765,918. WASHING MACHINE. Ewdard G. Ellis, Pomona, Ill
706,026. LANTERN ATTACHMENT FOR VEHICLES. Frank M. Fisher, Little Sioux, Iowa.
706,097. WASHING MACHINE. Henry A. Bierley, Portsmouth, Ohio.

PATENTS EXPIRED AUG. 2, 1904.

367,378. FURNACE GRATE. Charles W. Eckerson, Creston, Iowa.
367,387. CASTER. Thedor Goetz, New York, N. Y.
367,429. COMBINED SCOOP AND SCALE. Fernando C. Moore and John C. Thompson, Grinnell, Iowa.
367,529. LAMP-FILLING CAN. John A. Kendall, Maysville, Mo.
367,535. REVOLVER. John M. Marlin, New Haven, Conn.
367,538. WIRE SCREEN STRETCHER AND CLAMP. Andrew Mattson, Minneapolis, Minn.
367,569. EGG BEATER. La Fayette Wikidal, Salem, Ore.
367,634. COMBINED DOOR SPRING AND BUFFER. Henry A. House and Henry A. House, Jr., Bridgeport, Conn.
367,748. FLYING TARGET. Thomas Ferguson and William W. Cartner, Parkersburg, Iowa.

PATENTS ISSUED AUG. 2, 1904.

766,169. BRUSH HOLDER. Lars Christiansen, Chicago, Ill.
766,209. CAN OPENER. Admiral D. York, Ensley, Ala.
766,246. STEP AND EXTENSION LADDER. Aaron Hartzler, Goshen, Ind.
766,270. COMBINED SCREW DRIVER AND HOLDER. Stephen P. Lapham, Pike, N. Y.
766,298. SHEARS. George Voelliner and Paul Devaux, New York, N. Y.
766,379. CAN OPENER. Fabius R. Pendleton, Boston, Mass.
766,386. DOOR-CLOSING DEVICE. Oscar C. Rixson, Chicago, Ill.
766,471. SAFETY RAZOR. Orange S. Terry, Toledo, Ohio.

THE PIKE MANUFACTURING CO.

The Pike Manufacturing Co., Pike, N. H., have prepared a new edition of their valuable brochure entitled "Oil Stones; How to Select and How to Use Them," the front cover of which is ornamented with the design displayed. The object of this pamphlet is to give a few practical suggestions on the selection, use and care of Oil Stones. In the briefest and plainest manner possible, so that the most inexperienced person may be enabled

to buy and use an Oil Stone understandingly. No article among a mechanic's tools is of greater importance to him, for no matter how good the quality of his edge tools may be, they cannot do good work unless properly sharpened. The loss in damaged tools and wasted time resulting every year from the use of inferior or unsuitable Oil Stones is enormous, far exceeding, doubtless, the cost of all Oil Stones sold. Notwithstanding this fact, but few mechanics and still fewer dealers understand the particular merits of the different Oil Stones, or how to select them for different purposes.

ECONOMIC VALUE OF THE QUAIL.

Ornithologists of the Department of Agriculture have been making an investigation of the economic value of the bob white, or common quail, as a result of which it is now announced that that bird is "probably the most useful abundant species on the farms." It consumes large quantities of weed seeds and destroys many of the worst insect pests, yet it does not injure grain, fruit or any other crop. It is figured that from September 1 to April 30, annually, in Virginia alone, the total consumption of weed seed by bob whites amounts to 573 tons. Some of the pests which it habitually destroys are the Mexican cotton boll weevil, which damages the cotton crop upward of $15,000,000 a year; the potato beetle, which cuts off $10,000,000 from the value of the potato crop; the cotton worms, which have been known to cause $30,000,000 loss in a year; the chinch bugs and the Rocky Mountain locust, scourges which leave desolation in their path and have caused losses to the extent of $100,000,000 in some years. The report urges measures to secure the preservation of the bob whites in this country.

A Practicing Parson.

Little Elmer—Papa, what do the letters "D. D." after a man's name mean?

Prof. Broadhead—That he is a doctor who makes a practice of preaching, my son.—*Town Topics.*

HARDWARE IN BRAZIL

WRITTEN FOR HARDWARE

It is a regrettable fact that most of the countries of this hemisphere, situated below the equator, have for many years been neglected commercially by American manufacturers. The writer, who has been residing in Brazil for over twenty-five years, and who knows almost every State of the Republic from close personal observation, remembers very well that up to about ten years ago most of the American articles and goods now on sale in Brazil were entirely unknown. England and the Continent of Europe have been supplying the market for most of its demands, and they still get the bulk of Brazil's import trade, and this in spite of the fact that the United States buys more from Brazil than any other country in the world. The Brazilians are tenacious customers. They do not change willingly. The Germans now have business representatives in every community of Brazil.

I have now been visiting in the United States for about four months, and have seen a good deal of the country, but I do now

BUSINESS STREET IN CURITYBA, BRAZIL.

say there is probably no land in the civilized world less known. Besides the fact that it is "the country where the nuts come from" and the "Rio coffee," and that the yellow fever rages there, very little is known among the masses about our great South American Republic, which contains an area equal to that of the United States.

Turning now to the Hardware trade of Brazil I wish now to emphasize the fact that almost everything advertised in HARDWARE can be advantageously sold there. There are large Hardware houses, importers, wholesale and retail merchants, not only in the big cities such as Rio de Janeiro, Bahia, Pernambuco, Porto Alegre, etc., but also in many inland towns and settlements. Of the latter there are many of the first order in the three great southern States, viz., Rio Grande do Sul, Parana and Santa Catharina. These states have a thriving population, mostly engaged in agricultural purposes, and farm implements, farm wagons, harness, saddlery, blacksmith's and carpenter's tools, iron and brass bedsteads (the latter not too expensive), sewing machines, bicycles, musical instruments, cameras, fishing tools, firearms and domestic articles, will find a large and ready sale, if properly brought to the knowledge of the buyers.

When sending out catalogues and printed matter, it should be remembered that the language of Brazil is Portuguese. In every case where Portuguese catalogues are not available, those in Spanish or French should be used, as these two languages are largely understood in Brazil. For the States of Porto Alegre and Rio Grande do Sul, where most of the business is in the hands of the German merchants, catalogues in the German lan-

HARDWARE STORES IN PORTO ALEGRE, BRAZIL.

guage will do. The monetary unit of Brazil is the milreis, the value of which fluctuates to a great extent, and prices should therefore always be quoted in American dollars for goods delivered f.o.b. New York.

As to other articles the sale of which can be considerably enlarged throughout Brazil, I mention only: Lamps, chandeliers and electric light supplies; locks, keys and hinges; table and pocket cutlery, including razors, scissors, shears, etc.; spades, shovels and axes, hoes, wheelbarrows; black and galvanized iron and wire for fencing; barbed wire; kitchen utensils, wringing machines, water filters and presses; light agricultural machines

MARKET PLACE, PARANAQUA, BRAZIL.

and implements; coffee roasters, garden tools; telephone supplies, gas and gasoline motors, electric fans; medium priced furniture, glassware; varnish and paints; emery paper; plantation (coffee, india rubber, tobacco, sugar) supplies, horse, mule and oxen shoes; gas cooking stoves, small tools; measuring instruments; refrigerators; safes; incubators; tin boxes; office furniture; typewriting machines.

Digitized by Google

This list is by no means an exhaustive one. As I have stated above, almost everything in the Hardware line manufactured in

A COUNTRY HARDWARE STORE.

this country will find a market in Brazil, if American manufacturers will go after that trade. HENRIQUE SCHULER.

PRACTICAL HINTS ON ADVERTISING.

BY

CHARLES AUSTIN BATES.

Some advertisers find it impossible to get any enjoyment out of their meals because some competitor is worrying them. It is generally some larger house that has made a success by judicious advertising, and its rivals can never forgive it for being so prosperous.

The larger house was a small house, too, once upon a time—but the right sort of inside management and outside publicity started it along the road to success.

It may seem that the larger house has the field pretty well covered and cannot be successfully contended with.

This is the worst kind of a fallacy.

It is the excuse of the man who *thinks* that *other people are holding him down.*

As a matter of fact, nothing is holding him down but his own failure to properly utilize the most valuable of all business ammunition—advertising.

There are some reasons why he can serve customers better than the other house, or the other house would have all the trade. Let him present these reasons forcibly and pertinently, and it won't be long before his increased business will keep him too busy to worry about competition.

♣ ♣ ♣

Imitation is the sincerest form of flattery, and it is also very bad advertising.

When an advertiser makes a pronounced success, every Tom, Dick and Harry in his line of business proceeds to copy his style of ad and tries to share the prestige he has built up for himself.

His borders, type, cuts, and copy are followed as closely as possible—and this generally means about one thousand miles in the rear. The imitation may look something like the real ad at first glance, but the intelligent reader easily discovers the fraud and is not deceived. On the contrary, his impression of the imitating firm is very apt to be decidedly unfavorable.

Don't copy every move of your competitors—get up an original style of your own, and let others copy it if they want to. You won't care if they do, if it is a good style, for people will always distinguish it from its imitators and their ineffectual efforts will just be so much free advertising for you.

It is a lot more comforting to be flattered in this way than to flatter others.

♣ ♣ ♣

Talk in your ads the way you would if you were talking to some one who hadn't the slightest idea of what your business was.

Cut out the technicalities and the trade terms and get down to plain English.

A good way to find out whether your ad is plain enough and will be easily understood, is to let a small boy read it over before you send it to the publisher.

If there is any sentence he does not understand, re-cast that sentence until he knows just what you mean.

If there is any word too long for him, cut it out and use a shorter one instead.

I know you are not addressing your ads to small boys, but the principle is a good one just the same. If the small boy understands it, every one who reads it will know what it is all about.

♣ ♣ ♣

Better be on the safe side and make the ad too plain rather

than leave any doubt in a single reader's mind as to what you are driving at.

If you have a trade-mark and it is any good at all, you ought to use it in all of your advertising matter. If you haven't any or your present one is hardly creditable, by all means get a new one and use it for all it is worth.

People will instantly recognize it and will associate it with your ads and your goods. Pretty soon your trade-mark will have a reputation and people will be satisfied with no other kind of goods.

If you have a good thing you can't push it too strongly, and a good trade-mark will be a powerful help.

♣ ♣ ♣

Very often it is a great deal harder not to say a thing than to say it.

Some advertisers have pet ideas which they feel they simply must put into their ads. These ideas may consist of supposedly smart sayings—generally a play on words or a bad pun. All puns are bad anyway, so the "bad" is really superfluous.

If they saw these ideas in other people's ads, they would think them pretty sad, but as long as they are their own ideas life will lose its sweetness until these ideas appear in print.

When you come across an idea you think particularly cute or smart, show it to a dozen of your friends, and ask their frank opinion. Unless the verdict is unanimously favorable, reject it. Even if they all think it good, let it lie around a few days and

cool off. Then if you can look it in the face and still be proud of it, you might try your luck.

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.

Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

It isn't cuteness and it isn't smartness that sells goods. It is the plain and simple presentation of actual facts in a strong, convincing style. If you can write this style you are one man in a thousand. It is a great deal harder than it seems.

It is really not what you say in your ads, but what you leave out, that counts.

Remember this next time, and if you have a temptation to put down a lot of cute sayings, just take a deep breath, hold on tight, and leave them out.

As a general rule, no ad should appear twice in the same paper, although there are exceptions. Some of the largest advertisers have been running the same ad right along for years and years, but these ads have been valuable only because they have kept the goods before the public after the public had been educated to the point of using them.

On the other hand, the really most successful advertisers understand the value of novelty and they are constantly running new ads. Pears' Soap, Royal Baking Powder, Uneeda Biscuit, and many others will readily suggest themselves in this connection.

BUTTERFIELD & CO.'S NEW CATALOGUE.

BUTTERFIELD & Co., Derby Line, Vt., and Rock Island, Can., in their 1904 catalogue are presenting a book of attractive appearance and high-grade in every respect, being finely printed on heavy coated paper, illustrating their products of stocks and dies, solid die plates, and Rice's new screw plates; also taps and dies for all uses. Young's axle cutter and tools for engineers' and steam fitters' use. They make taps any fraction over or under size to suit customer. All sizes and number of threads to the inch not included on lists, also left hand, they consider special, and charge for accordingly. When exact duplicates are wanted of special work they suggest that orders should be accompanied by a stub with nut fitting the same. They add that taps of all kinds should be kept sharp by grinding in the flutes and on the chamfer. The Young's new axle cutter which they manufacture is designed for cutting back the nut shoulder on wagon and carriage axles that have become worn. The operation is performed by placing the cutting tool against the nut shoulder, using the axle nut with a common wrench to feed the cutting tool while the machine is revolved around the axle, which allows the thread on the axle to be cut back with ordinary dies. On axles using cap nuts, the end will be cut off with a hack saw or cold chisel, allowing the axle to be screwed up to the new shoulder. The axle cutting machine with hack saw will be shipped without the stock and die if so desired. Their catalogue graphically describes all of their goods and will be found most useful for those interested in this class of goods.

CAPE TOWN EXHIBITION.

In answer to an inquiry from the Department of State as to whether the United States had ever been invited to participate in the coming exhibition to be held in Cape Town, commencing November 1, 1904, and continuing for three months, United States Consul-General Bigham, of Cape Town, under date of May 18, 1904, says: This exhibition is promoted by a stock company and, as I understand, principally financed in England. When first projected it was the intention to confine it entirely to goods manufactured in Great Britain and her colonies; but this matter was changed so as to include any exhibitors from any country who desire to exhibit their manufactured goods or other products. At the time this change was made I was notified by Mr. Baker, the secretary, and asked to make the matter public in the United States, which I have done in several dispatches to your Department. This government is contributing £2,000 ($9,733). While there has been no notice served upon me of any invitation by the government here, the secretary has called upon me several times to talk the matter over. He does not understand that any other invitation is necessary or I am very certain it would be forthcoming immediately, for I have told him I have laid this matter before your Department.

REVIEW OF THE MARKETS.

WIRE NAILS.—There has been a better demand of late, which has had a tendency to make the market more steady than usual. The official quotations are as follows, f.o.b. Pittsburgh, sixty days, or two per cent. discount for cash in ten days:

Jobbers, carload lots.....$1.90
Retailers, carload lots..... 1.95
Retailers, less than carload lots..... 2.05

New York.—The demand is better than usual with prices improved. Quotations:

Single carloads $2.00
Small lots from store..... 2.10

CUT NAILS.—There has not been a good demand during the past fortnight. The official quotations are as follows:

Jobbers' carload lots.....$1.75 base
Jobbers' less than carload lots..... 1.80
Retailers' less than carload lots..... 1.90

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms 60 days, less 2 per cent. off in 10 days.

New York.—Demand has slightly improved and the movement is a general one. The following prices prevail:

Carloads on dock $1 89
Less than carloads on dock..... 1.94
Small lots from store 1.95

BARB WIRE.—The demand is about as usual for this season of the year. The official quotations are as follows, f.o.b. Pittsburgh, sixty days or 2 per cent. discount for cash in ten days:

	Painted.	Galv.
Jobbers, carload lots	$2.20	$2.50
Retailers, carload lots	2.25	2.55
Retailers, less than carload lots	2.35	2.65

SMOOTH FENCE WIRE.—Official quotations remain as follows, f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads $1.80
Retailers, carloads 1.85
Less than carloads 1.95

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

CORDAGE.—Business only moderate. Quotations on the basis of 7-16 diameter and larger are about as follows: Pure Manila, 11½ cents per pound; other grades of Manila, 10¼ to 11 cents, according to quality; pure Sisal, 9 cents; mixed Sisal, 7½ cents.

LINSEED OIL.—Under date of Aug. 8, the following advanced quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....46 cents per gallon.
In lots of 5 barrels or more.....45 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil.....65 cents per gallon.

PITTSBURGH PROMISES GOOD TIMES AHEAD.

Considerable interest in the business situation is taken by everybody at present. That there will be a revival of stirring times in the not very distant future, is the general impression, but just how soon is the thing we would all like to know. Taking the general conditions as a guide it would seem that the revival cannot be deferred beyond a few months at most. What are these conditions? Bountiful crops throughout the West and South, and good prices for them. Abundant supply of sound money in the banks seeking safe investment. Prices of inflated stocks sold down to actual values so that present investors may feel safe. These crops must be moved this Fall, thus making good business for the railroads. The roads must have material and they buy 40 per cent of the output of the steel mills. Idle capital will not lie idle very long and will find investment somewhere giving work for many hands. As an indication of what manufacturers expect we find them getting ready for an increased demand. The H. C. Frisk Coke Co. are building 1,000 more coke ovens, although now only running half their capacity; Jones & Laughlins are building three additional furnaces; 1,000 workmen's houses have just been contracted for at Lorain, Ohio. The political contest now on may delay the prospective revival until after election day, as it forms a convenient excuse for deferring action and it is possible the forward movement may not come until next year, but come it must and when it comes those best prepared will have the benefit of their foresight.

LOGAN-GREGG HARDWARE COMPANY.

THE PHILADELPHIA TRADE.

The early part of July is generally known as the vacation season, and not only are our salesmen largely off the road, but jobbers' store forces are depleted to a large extent in recognition of the holiday spirit. Many dealers throughout the country also take stock about July first, while others take advantage of the break caused by the Fourth of July to gain a few days' rest. Manufacturers sum up the business of the preceding six months and lay plans for the balance of the year, so that all causes seem to conspire to produce the smaller trade which is always expected at this season. 1904 has been no exception to the rule, but now that this season is passed travelers are once more resuming the road, and prospects seem to point to a fair fall trade. The changes in price July first were comparatively unimportant, and declines were offset in some cases by advances, so that the market is not in very different shape, and with the abundant crops now bestowed upon our country by a favoring Providence there seems to be very little apprehension in regard to the future.

It is a commonplace remark that our feelings are largely influenced by the weather, and now that we have started on the dog-days of August we realize forcibly what has recently been called the "stupidity" of the weather, and it is almost too much to expect much snap and vim under such conditions. Nevertheless, the vacation season is now practically closed, and with salesmen again actively at work the revival of trade is confidently expected, and the good crops now in prospect all over the country at large may prove sponsors for a fair Fall trade, and this feeling of optimism is apparently justified by the results coming in from salesmen now at work. The natural question at such a time is, "Are stocks large," and we are hardly inclined to answer this in the affirmative, as the past few years have seen such an enormous demand for goods that stocks have become depleted, and customers have postponed buying in hope of lower prices later. These lower prices, however, do not appear to be realized, for, while some lower quotations have been given us on a few items, they are frequently offset by advances made on other goods, and among items advancing in the last few weeks may be named Clothes Wringers, Wire Lawn Rakes, and Scythes, while all Tacks are considerably firmer and higher prices are named on the best makes Collections seem to be improving and now that crops are being turned into money it is but reasonable to hope for a much better state of affairs in this department.

CINCINNATI TRADE.

The Hardware trade is longing for something. What is it? Prices are firm, there are no anticipated changes in the near future, collections are comparatively good; Mr. Bahlmann, of the Bahlmann Hardware Company, says the want of rain in Ohio and Kentucky will no doubt have a disparaging effect on corn, but there was comparatively little bought on account of the very late Spring. Mr. Berger, of the Kruse Hardware Company, says: "We can hardly expect much until our men get started on their regular routes interrupted by the Elks' Convention (which, by the way, was the means of leaving considerable money in Cincinnati, but I cannot see any appreciable difference in our local business)" Mrs. Behrens, relict of the late F. D. Behrens, manufacturer of Hardware and harness specialties at 62 Opera Place, has moved to East Sixth Street, occupying two floors of the Barriet Electric Motor Co. Mr. Barriet was, four years ago, manager of the gun casting department of the West Point Academy, N. Y. It is intimated that Mrs. Behrens, now secretary of the Barriet Company, may in the near future, change the style of her firm name to the name of the latter. The Pickering Hardware Co. say that they have only a fair trade, their "special sales" amounting to the bulk of their business, and unless we have rain, the farmers will be in debt in this section. John Story has added Hardware to his plumbing business and enlarged his former quarters at Seventh and Freeman Avenue.

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN., U. S. A.
Improved Carpenters' Tools.
SOLD BY ALL HARDWARE DEALERS.

THE PROSPEROUS NORTHWEST.

Our Minneapolis Correspondent is Optimistic Concerning Fall Trade.

The question of Fall business in the northwest is dependent very largely on the crops. With us in the cities, if it should be bad, work that is already started would have to be finished up, but very little new work would be started. The immediate effect in the country would be much more than this, as well as the effect on the jobbers in all lines. About two weeks or more ago the sun commenced to shine in the regular Minnesota way and it grew hot. We have heard marvellous stories about the way the corn has been growing. For the past three weeks we have had ideal weather for small grain, as well as for corn and all hearts are glad. If the same favorable conditions prevail through the harvest and threshing, there is no doubt but what we will have one of the largest crops ever known, and probably covering all parts of these three States, Minnesota and the Dakotas, better as a whole than ever before. There is a comparatively small strip in the Red River Valley that did not recover from the Spring overflow. The farmers in this section will suffer, but take it one year with another they have nothing to complain about, for the Red River Valley is most always sure of a crop and a big one. Farmers have had good haying weather and the hay crop is the largest for many years. Take all these conditions with the high range of prices prevailing, the increased acreage, there ought to be a larger amount of money coming into these States for this year's crop than ever before, therefore conclusions can be drawn as far as the present indications are concerned, that we are on the eve of a very prosperous time, but there is no doubt that up to the first of July jobbers in all lines and the principal large retailers have met with considerable loss in volume of business as compared with previous years. Building operations in Minneapolis are going along fairly well, some little labor trouble, but nothing serious. Quite a number of the better class of residences are being erected and good hardware is being used. There does not seem to be very much trouble about getting people to buy good goods, not much trouble about prices; of course we can always find fault with what the "other fellow" is doing when we lose a bill, but we get one ourselves now and then, that we presume the "other fellow" would like to have, but on the whole things are going along quite smoothly.

W. K. Morison & Co.

THE COLUMBUS TRADE.

We know that ministers and campaign speakers can make the same address many times and warm up to the subject as though it were brand new. Some of the listeners will go to sleep after they have heard the same speech a dozen times or more, and that is what we fear will happen when reading trade reports that naturally must be similar in substance. We are at our posts of duty with regularity and always find more to be done than we can accomplish. We, however, try to keep away from the rule of not doing to-day what we can put off for tomorrow. That rule will get a person in deep water mighty quick. We had a fine business in July, but we do not expect more than an average August. Everything looks favorable for a good Fall trade. The iron industry seems to have taken a new lease on life and have plenty of business. As iron is the barometer that indicates business conditions, we certainly have reason for encouragement. Roosevelt and Parker are both elected now (if you believe the papers), so the country will be safe. Ohio has just harvested a very heavy hay and oats crop, and the prospect for an unusually good corn and potato crop will help trade more than anything we can think of. It is to be regretted there is so much uneasiness in certain sections about the labor situation. What a boom it would be for business if everything could run smoothly for a year. The packing situation is bad, and it looks as though the trouble will spread to other trades. Evidently there are some two-legged hogs among the packers or workmen. More than likely they have a few on both sides. T. F. Smith and wife have just returned from a Western trip. He regrets he is not a boy again, as he thinks the Northwest offers great opportunities to young men who are inclined to hustle. He visited the National Park, Seattle, Victoria B. C., and other cities of interest *en route*. He has a good brown color and is in the harness again and works well. Of course, he has some very large stories to tell, which we accept as being literally true with the exception of a few bear and fish stories; but any person has a license when it comes to stories on those subjects. The weather is fine, and our ball team is just three points from the top and will get there to-day—we think.

The Smith Bros. Hardware Co.,
J. H. Smith.

THE ST. PAUL TRADE.

Trade is looking up. We mean by this, that the crop prospects are good and unless something unexpected happens, we shall have an average crop, which means a great deal if prices on wheat, corn, oats and flax are maintained somewhere near the present prices We are glad to see that prices on Hardware are firm; this solid condition helps even you, handling the goods, and gives strength to everything. Sales are very fair compared with last year, and we expect that sales during the Fall and early Winter months will be at least as good as in 1903. Nothing unusual occuring, we have but little to report.

Hackett, Walther, Gates Hardware Co.

THE DAVENPORT TRADE.

For comfort and prosperity in the Hardware trade just now there seems to be

Too much politics, too much fair;
Too much water with too much air;
Too much stock and too little used,
Too much credit too much abused;
Too little money, too slow pay,
Too many men getting too gay;
Too much combine, too much trust,
Too much getting-rich-quick or bust;
Too much fish and too little beef,
Too much waiting for strike-relief;
Too much fighting at great expense,
Too much war without much sense;
Too much worry, day by day,
Too much work for too little pay.

Sickels, Preston & Nutting Co.

HOW GRAPHITE LUBRICATES BUSINESS.

It has been well said but it will bear repeating again, that the graphite trade is a very good barometer of business generally. A little something in the way of graphite is used everywhere and by everybody. If the sales of Dixon's graphite pencils let up at all, we know there is a little slump in the stationery business; if the sales of crucibles increase, we know that there is something in the way of a boom on in the brass business; if the sales of stove polish increase, we know there is a brightening up of the stove trade—no pun intended; if the manufacturers of gunpowder increase their orders, we know there is war somewhere in the world and gunpowder is being called for, or that the sporting business has taken a jump; if there is a demand for automobile lubricants, then we know that the "White Ghosts" and the "Red Devils" have increased, and are flying about the land. If there comes an increased demand for flake graphite from the big trunk lines, then we know that the extra locomotives have been called out, and that there is a larger call for transportation. We might go on and mention the various other different calls that are made for graphite, but suffice it to say that there has been a very even demand for graphite goods all along our various lines, although no marked jumps in demands except possibly in graphite paints, which shows that iron construction work is still going on

in no lesser way. We note also that a demand for graphite greases is steadily going on, which would indicate that while greases are finding more favor than heretofore, that the addition of Dixon's flake graphite is of value to greases of all kinds, we see no reason to be pessimistic, on the contrary, we are hopeful for quite a large increase in the Fall business.

JOSEPH DIXON CRUCIBLE CO.

THE SAN FRANCISCO TRADE.

On this coast the effect of the Russians' recent seizures in the Oriental Pacific and Red Sea of ships of commerce was pronounced, for vast amounts of goods in Hardware and other lines have been going to the Orient from San Francisco and other Pacific coast ports and our export trade is bound to be very seriously affected if the seizures continue. In fact, the Pacific Mail Steamship Company, of this city, announced within the last week that it would receive no more freight for Japan.

The feature of the week locally was the throwing open by the Government of the Panama Railroad to all shippers of freight, a condition that will inject a new stimulus into the commerce of the port of San Francisco by enabling it to regain from New York, Chicago, St. Louis and other large Eastern distributing points a vast trade area wrested from it years ago by the acquisition of the control of the isthmian railroad by the transcontinental rail and steamer lines. Years ago this city was the distributing point for about all the territory on the Pacific coast extending as far East as Colorado; but when, by reason of the passing of the Panama line into the control of the overland railroads, the Chicago and St. Louis merchants could undersell San Francisco, even in Oakland, not to mention Sacramento and other important nearby cities. It was a fine plum San Francisco lost, but the signs of the times now indicate that California's metropolis is to get that plum back again.

For the rest, conditions relating to the Pacific coast remain about as recently stated in HARDWARE'S San Francisco letters. The growing conviction that our wheat and barley crops will be lighter than expected several months ago has caused heavy buying of both these grains in the three large interior valleys, where buyers have been eagerly paying the farmers more than San Francisco prices to obtain supplies. Speculators have supplemented these purchases, hence pronounced activity is reported in the grain market. All the other important crops are turning out well and are bringing first-rate prices as a rule, so the agricultural and commercial conditions in this coast territory may be pronounced excellent. Strictly mercantile business is reported more or less quiet, but not to the point of dullness, and Hardware and other industrial lines are looking forward to another good year.

From Pacific Coast States, exclusive of California, the writer is indebted to traveling salesmen for the following news notes relating to Hardware dealers and their store changes: In Oregon E. O'Connell has been succeeded by the Pioneer Hardware Company in Marshfield. This store also carries implements. J. F. Meinzer, at Youcalla, has sold to Stearns & Chenowith. At Ione Cronan McArthur is about to open in the business. At Pendleton the Whittinghill Mercantile Company has incorporated. At Hood River Wm. Haynes has bought the store heretofore conducted by E. E. Savage estate. The Arlington Implement and Hardware Company at Arlington has incorporated. In the State of Washington the Palouse Hardware and Implement Company, of Palouse, has bought W. F. Chalenor's store and incorporated for $30,000. The officers of this new incorporation are: G. W. Peddycord, president and treasurer; W. F. Chalenor, vice-president, and Frank Chalenor, secretary. In the recent fire at Cle Elum the store loss of Haines & Spratt was $1,500. Work is well advancing in Seattle in connection with the new wholesale building being erected by the Seattle Hardware Company. F. T. Larrabee & Co., at Edwall, also implements, have incorporated. In Pullman a half interest in the Pullman Hardware Company has been purchased by E. S. Burgan & Son. The other half owner, E. W. Quarrels, will continue as manager. In Bellington an interest in the Hinsdale Hardware Company has been purchased by J. L. Pickering. The Van Buren Implement Company at Bellingham has been incorporated at $1,000. The Seattle Iron and Wire Works has incorporated for $10,000 by H. M. Clarke, A. G. Boyd and P. E. Clayton. E. M. and David Edmonston have just opened for business at St. Johns. A new store has been established by Glover & MacFarlane in Asotin. A stock of Hardware has been added to the implement store in Condon, conducted by W. L. Barker. Jacobs Bros. & Co. have succeeded the Farmers and Mechanics' Store at Bellingham. Hornbeck & Bullard in Ellensburg have dissolved, the former continuing, and a new store has been started in Chewelah by the Stanley & Timmel Hardware Company. In Idaho the Idaho Implement Company, of Boise City, has opened a branch at Caldwell, buying the Canyon Implement Company's stock at that place. August 1st a new store was opened in Grangeville by W. Hickenson, and in Montana the Basin Hardware Company, of Basin, has been incorporated for $15,00, and at Nelson, B. C., the Wood-Vallance Hardware Company has succeeded H. Byers & Co.

INDUSTRIAL PRESS ASSOCIATION.

THE PRESENT POPULARITY OF BICYCLES.

A prophecy made early in the present year to the effect that the demand for bicycles would during the summer and spring season of 1904 be greater than it has been in recent years, has, according to Cleveland dealers, been entirely fulfilled.

The reaction following the fad which prevailed shortly after the invention of the modern safety has now worn away and a healthy demand has set in, not only in Cleveland, but in many other parts of the country. Dealers who were questioned yesterday on this subject estimated the demand this season to be at least 50 per cent above that which existed a year ago.

"The wheel seems now to have fallen into its proper place," said one dealer. "Many people are using bicycles for business purposes, both men and women, and there is also a good demand for them on the part of people who want this sort of exercise. It is not being overdone, however, in this latter respect, the demand being mainly in directions where there is really a need for the wheel. Suburban residents, park policemen, and police officials in the country towns about the metropolis are using wheels extensively. Considered purely as a sport the interest in bicycling is graeter this year than it has ever been since the craze was on full blast. As evidence of this, witness the interest shown in the races which are soon to take place in Rockefeller Park. There seems to be quite a revived demand for the tandem safety this year. Many young women are again taking to bicycling as an exercise, and considering the question in a general way it would seem as though the wheel was yet destined to have nearly as large a popular esteem as it had in its palmy days."

CONSULAR COMMERCIAL COMMENTS.

RUBBER CULTURE IN MEXICO.

(From United States Vice and Deputy Consul-General Conley, Mexico City, Mexico.)

Probably more letters of inquiry are received at this consulate on the subject of rubber culture in Mexico than upon any other single subject. In spite of repeated warnings from a great variety of sources, school-teachers, preachers, and other persons working for small salaries in the United States continue to invest their savings in rubber companies about which they know nothing. The desire to invest in a mine or a rubber plantation, usually mythical, or some other alluring scheme in some far-away country, seems to be an evidence of the gambling instinct inherent in every individual. The man or woman working for a small salary seems to think that his or her only chance to get rich is by some lucky investment which will pay fabulous dividends, and the wilder the scheme presented the more anxious he or she is to invest money in it. A number of Americans have, to my own knowledge, purchased stock in fake rubber plantation companies after having been warned by reliable persons against such investment. A number of other Americans have made trips to the tropics of Mexico, been wined and dined by plantation managers and shown a few rubber trees, and become satisfied that they knew all about rubber culture. Afterwards they have asked the opinion of old residents of that section on the subject and gone away pitying them for their dense ignorance, because they were unable to see the immense fortunes to be made in rubber.

AN ALLURING PROPOSITION.

Theoretically, rubber culture is a very alluring proposition, but thus far it has never yielded any practical results. It was experimented with for years in other countries before its cultivation was undertaken in Mexico, and, according to a recent report of the United States Department of Agriculture, the experiments have always been failures. There is as yet no good reason to believe that its cultivation in Mexico will prove any more successful than it has in other countries. The recommendation of this report that farmers in tropical countries might profitably plant various species of rubber trees on otherwise unoccupied spots of land, purely as experiments, is most reasonable. After such experiments have been made involving no great expense the tropical agriculturist may discover how to grow rubber successfully upon his particular piece of land and may then attempt to make a crop of it.

The cultivation of rubber is based upon the supposition that the supply of wild rubber will one day be exhausted or greatly curtailed, but this hypothesis is entirely uncertain. The regions from which the supply now comes are still largely unexplored, geographically and botanically, and the discovery of new areas of rubber-bearing vegetation and of new rubber-producing species is not infrequent and may continue for many years. Moreover, the progress of science may enable the extraction of rubber from juices not now utilized, and the discovery of such a process might change the entire aspect of the rubber industry. There is always the possibility, also, of the discovery of a substitute for rubber, such as its synthetical manufacture from turpentine, which has been experimented with. Thus a slight increase in chemical knowledge might at any time change the whole situation.

AN ERRONEOUS IDEA ABOUT RUBBER.

Most Americans have an idea that rubber is a product like wheat or corn, to be obtained from a given tree. The idea is quite erroneous. It has been estimated that 1,000 different species contain rubber, though commercial quantities have been obtained from only forty or fifty.

It has been found by experimenters in other countries that a rubber producing tree which will flourish in any given locality will not necessarily yield rubber. The first experiments in rubber culture were naturally made with the Para rubber tree, the one best known. It was planted in regions which were apparently exact duplicates of those where the wild tree grows, but for some reason the experiments were absolute failures. A number of experiments were made in different countries with various rubber producing species, all with a like result. In Java the Dutch experimenters are said to have come to the conclusion that, even if the experiments were a success, the expense of running tropical plantations, the difficulty of obtaining honest and competent administration of the estates, ignorance of how to collect the rubber and to spare the trees, and how to properly cure the rubber, would make rubber cultivation unprofitable. The use of the *Castilloa clastica*, the tree which is being cultivated in Mexico as a shade tree for coffee plantations, does not seem to have been a great success, as the rubber tree does not thrive in places where coffee will grow, and vice versa.

Just now there are many different views held by persons who know something about this subject as to the conditions under which the *Castilloa clastica* will thrive and produce rubber, but they all seem to be agreed that the work must be carried on in an insalubrious climate, where labor is scarce and uncertain and where unlooked-for obstacles are constantly arising. Rubber prospectuses continue to publish estimates, or rather guesses, made twenty-five years ago, and to quote the glowing statements of persons who have long since repudiated them.

Rubber culture is a very complex problem and it can not, by any stretch of the imagination, be said to have passed the experimental stage; indeed it is not very far advanced in that stage. If men of millions, who could afford the experiments, were the ones making them there would be no necessity for commenting upon them, but it would seem to be better business judgment for persons of small means to invest their money in a known industry rather than in such an uncertain undertaking.

GERMAN TOOL MANUFACTURERS WANT PROTECTION.

The Association of German Tool Manufacturers, says James H. Worman, Consul-General, Munich, Germany, have urged the Imperial Government to prevent the further inroads of American manufacturers upon their special branches. It is claimed that in the first quarter of this year the import of tools had more than doubled, having increased from 245 tons to 526 tons, and that in the second quarter the increase threatens to become even larger. They make a special point of the fact that the United States Government levies a tax of 45 per cent. on German machines, against the German tariff of 5 per cent., and they insist that German machines are in no wise inferior to the American and that there is no need whatever for the introduction of American machines and tools into Germany.

TRADE IN NEW SOUTH WALES.

The imports into New South Wales from the United States exceeded in 1903 those from France and Germany combined by $8,682,430, though those countries took $8,106,275 more from Australia than the United States did. Both France and Germany have a fine line of first-class steamers plying between Australia and Europe, and yet with all the money they expend in the furtherance of trade the value of their imports into this country falls far below that of the United States. The imports from the United States were valued at $14,028,420 and from France and Germany at $5,345,990. The exports to the United States and dependencies were $10,069,045 and to France and Germany $19,069,045. The imports from the Hawaiian and Philippine Islands were $130,470, and the exports to them and Alaska were $1,262,350.—*Orlando H. Baker, Consul, Sydney, New South Wales.*

OPPORTUNITIES FOR AMERICAN ENTERPRISE.

Vice- and Deputy Consul-General Edward M. Conley, writing from Mexico City, Mexico, recently, notes the following opportunities for American enterprise:

Mexico is going to have a network of railroads in the not distant future which will open up the possibilities of her great natural resources. Irrigation will be accomplished; timber tracts will become valuable; new mines will be opened up and old ones worked that can not now be profitably operated; the fuel problem will be solved and the hum of machinery will be heard in thousands of manufactories. Many great business successes have been made by the keen foresight of men who foresaw where development was to take place next. Mexico offers a great field to such men. The man who can judge accurately the lines which industries are going to follow in Mexico, and who takes advantage of his judgment to get the cream of the natural advantages, is the man who is going to make a great fortune. This is, of course, in a measure speculative and beyond the province of this article.

In summing up, it may be said that if an American engaged in any line of business is doing well where he is, he had better stay there; but, if for reasons of competition, health, or otherwise he desires to change his location and contemplates engaging in business in Mexico, he should come here and look over the ground before deciding to establish himself here. Owing to the paucity of reliable printed matter, he will be obliged to obtain most of his information first hand and he will save time if he makes the personal investigation at the start.

THE SPONGE.

WHAT THE SPONGE REALLY IS.

A great deal of ignorance appears to exist regarding what the sponge really is. Not only do many people think that it belongs to the vegetable kingdom, but some go further and cherish the delusion that it is made by man. Therefore a few words describing its nature, fishing, etc, will, we think, be found interesting.

When the sponge is brought up alive out of the sea, it does not resemble the sponge of commerce. It is then surrounded by an outer skin, a simple, unorganized membrane, in which the pores appear or disappear at the animal's will, or supposing that a sponge has no will, owing to local environment. It is intersected with canals and cavities, lined throughout by a sticky glutinous substance called sarcode, of a greyish brown color and of the consistency of treacle. This the fishermen call the "milk" of the sponge. By the peculiar properties of digestion and reproduction which it possesses, it sustains the life of the animal and propagates its species.

THE ONLY LIVE PART OF THE SPONGE.

The sarcode is the only part of the sponge that is alive, the flexible skeleton to which it is attached being inorganic. It is this skeleton which is commonly known as the sponge. The fibrous material is chemically allied to that spun by silkworms. Through the numerous exterior small pores the surrounding water is drawn, carrying with it the food of the sponge in the form of particles of animal and vegetable matter. This stream of water passes along the interstitial canals to the innermost part of the sponge, thus passing over a large area of the sarcode, which constantly draws to itself the particles of matter to be presently digested. The water is then taken up by a similar series of canals, the minute vessels gradually branching off into large chicts, and forced out through the osculae at its surface.

A SUBMARINE VENICE.

It has been aptly said that the whole sponge represents a kind of submarine Venice, "where the people are ranged about the streets and roads in such a manner that each can easily appropriate its food from the water as it passes along." The osculae are the large holes at the surface of the sponge skeleton. The movements in the sponge which cause currents of water to pass through it are produced by ciliary action, that is, the waving in one direction of tiny filaments like eye-lashes. The sarcode, or living outer and inner glutinous covering of the sponge skeleton, is possessed of a rudimentary nervous system which causes it to close the pores and suspend the process of inhalation and imbibition.

PROPAGATION OF THE SPONGE

Propagation of the different varieties takes place in two ways; by the formation of gemmules, or by the division of the creature. The little gemmule, which is a yellowish capsule, floats out of the parent sponge and attaches itself to any suitable neighboring object, such as stone or rock, and here it grows, slowly becoming larger by adding to that marvellous skeleton which we daily use in our bath or at our toilet.

The outer membrane in which the sponge is found has to be removed soon after the sponge is fished. If this is not done, fermentation followed by speedy putrefaction sets in, and from being tough and elastic, it becomes soft and flabby, and with the least pressure the fermented juice oozes out, giving off a most offensive odor. It is then no longer of any use. The organic part of the sponge, it will thus be seen, has to be taken from it shortly after it is taken from its bed. This has to be done on the fishing grounds, sometimes long before the boats return to port. As this process is necessarily rude and incomplete, it has to be supplemented by a more careful bleaching process when the sponge is received by the sponge merchant.

HOW AND WHERE THE SPONGES ARE FISHED.

The localities most favorable to the growth of sponges are in the tideless waters of the Mediterranean. The methods used in fishing for them are the diving apparatus chiefly, but native divers are also employed, and in other places nets and the harpoon are extensively used. The trawl net is a primitive process, and only inferior sponges are obtained by it. Those fished by the harpoon are liable to be damaged The diving machines used are nearly all exported from England. Cuban and West Indian sponges grow in shallower waters, and are consequently more easily fished and cheaper than the Mediterranean varieties.

Bertha—I guess it's going to be a match between Maude and Charley.

Constance—So?

Bertha—Yes. Maude to-day spoke of his stuttering as a slight hesitancy in the enunciation of words.—*Boston Transcript.*

"NATIONALS"

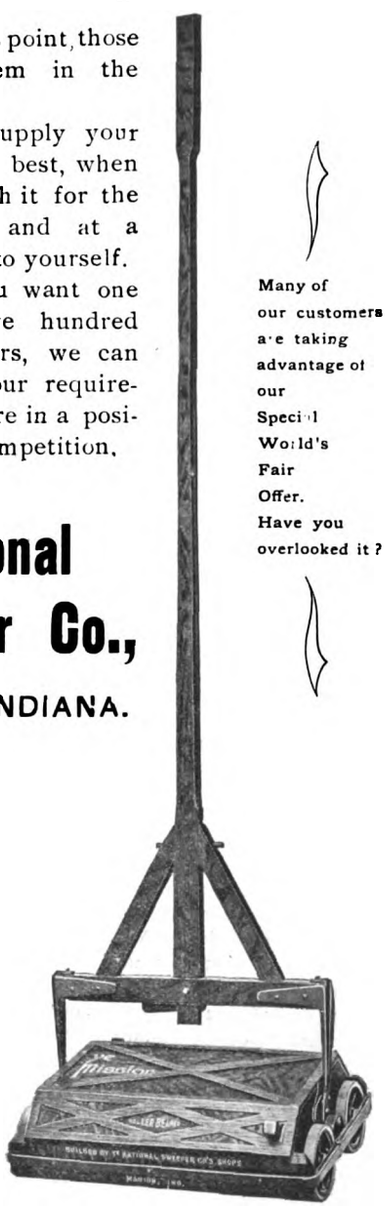
Stands for the very best, the most unique, the latest construction and the greatest efficiency in Carpet Sweepers.

It is an absolute guarantee of superior quality and finish, patented features of real merit, and those little details that go to make an entirely satisfactory Carpet Sweeper—small details that have added so much and were not to be had until introduced by us.

Have you ever stopped to compare what you had to "put up with" in the past, with that which you can obtain to-day from us? Those who are buying.

National Roller Bearing Sweepers

appreciate this point, those who buy them in the future will.



Why not supply your trade with the best, when you can furnish it for the same money, and at a greater profit to yourself.

Whether you want one dozen or five hundred dozen sweepers, we can meet with your requirements. We are in a position to meet *any* competition.

Many of our customers are taking advantage of our Special World's Fair Offer. Have you overlooked it?

National Sweeper Co.,

MARION, INDIANA.

WE MANUFACTURE THE FINEST AND THE LARGEST LINE OF SAWS IN THE WORLD

DISSTON

THE BRAND THAT STANDS THE TEST OF TIME

HENRY DISSTON & SONS, INC., PHILADELPHIA, PA.

OUR NEW ORLEANS LETTER.

Special Correspondence.

The feature of the fortnight has been the renewed activity on the part of the lumber interests, and the consequent sudden quickening of one of the largest parts of the mill supply business. Within ten days mills have been rushing supply orders into New Orleans, and there has commenced a rush of business for all manner of repair and refurnishing goods. In addition there has been a brightening outlook for building hardware and household goods in New Orleans, due in great part to the partial settlement of a number of the labor troubles and the letting of an unprecedented number of residence building contracts which will be erected during the fall and late autumn.

These two developments of the fortnight have decidedly brightened the dull outlook which characterized the situation a half-month ago. However, through this time prices have not altered; and in addition the agricultural regions are still on figurative tenterhooks to see which way their prospects will turn. The cotton region has every prospect for a good crop at fair prices, and an undiminished purchasing power during the coming Winter. The month of August, however, may alter this sadly, and while there are these slips remaining between the present and the cup of prosperity, the planters and those who live through and by them are wary. The sugar belt is practically certain of its good crop; and already the implement men and the mill supply men are beginning to feel the swell of a trade that will flow full tide for the first time in three years. The outlook for the implement purchasing, Hardware buying people of the rice belt is brightening, for the organizations to handle the crop are well under way.

These things together indicate that the Hardware business in the half-circle of 200 miles radius which is tributary to New Orleans, as well as the 500-mile radius within which New Orleans conditions serve as a barometer, will be fully equal this autumn to that of last. The differences in the expected trade and that of last year were pointed out in the special correspondence from this point a fortnight ago. The developments of the fortnight have served to verify the forecast then made. Mill supplies are quickening, rapidly and heavily. Hardware building sorts is picking up rapidly. Implements are going out to the sugar and cotton fields; while the rice people are beginning to take notice for their autumn harvesting. Of course, all this is chiefly by indications as yet. The bulk of the business will not start until after September 1.

Several special items have developed in the fortnight. One of these deals chiefly with the export business of the port, and falls into two separate occurrences.

James Graham, steamship agent of this port, has inaugurated a line of steamers to South Africa; Gardinar & Easton, of Cape Town, being his correspondents. This steamship line is to cater chiefly to the stock-raising people; but heavy work is being done to induce the wholesale Hardware men of New Orleans and the upper Mississippi Valley to take advantage of the opportunities offered to ship to South Africa this way and thus cut into the virtual monopoly thus far controlled by the Eastern seaboard. The first ship sailed two days ago, with several small consignments of Hardware and implements. For the next sailing there is in prospect about 1,000 tons of Hardware, machinery, mining utensils, etc. One special feature is a heavy shipment of knocked down mine cars, which are being brought down to New Orleans from Pittsburg and then shipped from here via the new line.

The local firms which have been giving the greatest attention to this are: A. Baldwin & Co.; Stauffer-Eshleman & Co.; and Woodward-Wight & Co. A number of the local agencies have also been seeking authority to utilize this new means of export to add the South American territory to their lists.

In this connection also, there has been the visit to New Orleans of Alfred Anderson, the New York traveling purchasing agent of the Panama Railroad and the Panama Canal Commission. As a result of his visit the New Orleans merchants are rather discouraged over the chances New Orleans will have to handle the shipments of Hardware, tools, utensils, implements, etc., that would be required on the isthmus. While here Mr. Anderson said that New Orleans would have the handling of the greater part, if not all, of the lumber, breadstuffs, etc., but that New York would retain the Hardware, machinery and kindred items. This has been a decided disappointment to the local merchants who have thought they stood a better chance than the Eastern seaboard in these lines, particularly as they could demand water rates from Pittsburg and the cities of the Ohio.

Mr. Anderson, speaking of the matter, said: "The facilities afforded in New York are infinitely better than they are in New Orleans for all goods that are required within any certain and specified time. The New York merchants can have goods on shipboard and bound for the isthmus before the New Orleans merchants can give their definite answers on prices and quotations—much less put their goods on ship."

Despite this the New Orleans merchants are working to have better steamship service to Colon, and feel that they will be able to handle, or at least to offer to handle Hardware and such other goods on as good terms as the merchants of New York City.

New Orleans is now affording testing grounds for several experiments that are of interest to Hardware and implement men. The cast-iron brazing process which is handled by a firm of which Captain John G. Woods is president, is conducting experiments which are said to be fully satisfactory in every way to the experimenters. Those who have used some of the repaired articles assert that the process does what it claims. Furthermore, there is being tested in this city an implement for use in excavating sewers or ditches in the country, or any other sort of general work.

Ship chandlery is expected to pick up quite a bit when the first cotton ships get in after September 1. The outlook for the grain trade is splendid, with chances that the city's shipping will be thirty per cent. larger this season than it was last in gross tonnage. This will mean that the city will do just thirty per cent. more ship chandlery business this season than it did last. The fact that so many of the local steamship agents have business conditions on this side, has led a number of the lines entering here to purchase nearly all their permanent supplies on this side the ocean.

By September 1 nearly all the vacations will be over. The drummers have already had theirs, chiefly during the past fortnight; and these are now out on the road. Within three weeks at the outside Hardware in New Orleans will be going the race of the winter. By that time the cotton, the rice and the sugar crops will be "set," and the country will be buying accordingly.

Even a Worm Will Turn.

Miss Fitz-Jones (to Smithers, who has claimed first dance) —You're quite an early bird, Mr. Smithers!

Smithers (making big attempt at something gallant—Ah, yes, bah Jove! and I've caught the worm, too,—*Exchange.*

WHAT IS THE METRIC SYSTEM?

The above question is considered by Prof. T. J. Chapman in an article in the Pittsburg *Commercial-Gazette*, which forms part of a pamphlet the American Iron and Steel Association has prepared in opposition to the bill now before Congress. It is as follows:

"The proposition now before Congress to change our present system of weights and measures for what is called the metric system is certainly not well understood by the people, or a protest would go up that would call a halt to such a proceeding. This proposition contemplates the abolition of our entire system of weights and measures and the substitution of another of which the very terms are so long and difficult as to be startling. The old familiar inch, foot, mile, etc., are to disappear, and in their places we are to have the meter, millimeter, centimeter, dekameter, kilometer; instead of the old-time bushel, peck, quart, etc., we shall buy and sell by the liter, centiliter, dekaliter, etc.; and instead of ton, pound, ounce, etc., we shall deal in grams, milligrams, kilograms, quintals, tonneaus, etc.

"To most reflecting minds this invasion of our English language by a host of foreign words and the displacement of the terms familiar from our childhood by a string of difficult words of Latin, Greek, and French origin is very distasteful. Apart from mere sentiment, however, there are very grave objections of a practical character. For one thing, to all succeeding generations all our present literature and science would be largely unmeaning, or at least difficult to be understood. Every line of poetry in which any term of distance, weight, or measure occurs would have to be reconstructed. To every present book a glossary of obsolete terms would have to be added. Just as the ancient terms homer, hin, and cubit, used occassionally in our translation of the Bible, are indefinite or unmeaning to the average reader, so, only on an infinitely greater scale, would be all the terms now used in millions of instances in our present literature.

"Another objection is that all our appliances for determining weights and measurements would be rendered useless. All our scales, yardsticks, quart measures, and so on, would have to go to the junk heap. Millions of dollars would be required to replace them with standards of the new system. These are consideration, that one would think ought to give our legislators reason to pause. Yet men of whom one would have expected wiser counsel have been using their influence to have this enormity imposed upon the people.

"The inconvenience of this system for practical purposes is appalling. An inch is 2.54 centimeters; an acre is .4047 of a hektare. A peck of beans is .0881 of a hektoliter. Shylock's 'pound of flesh' becomes a demand for .4536 of a kilo. The area of Pennsylvania expands into a territory of 119,140 square kilometers. From Carnegie to Pittsburg is 12.8744 kilometers. Does all this add any clearness to our ideas of size and distance? Milton's fallen angel drops plumb down not '10,000 fathoms deep,' but a distance of one myriameter 8 kilometers 2 hektometers 8 dekameters and 8 meters. Only think of it! These are only a few specimen beauties of the proposed scheme.

"The metric system may have, and likely has, some advantages, but they can never counterbalance the enormous disadvantages which we have mentioned."

A Happy Translation.

One morning lately a Michigan merchant came to his office with a bad cold in his head, and the first letter he dictated was to his wife in the country, in which he told her that, owing to the fact that he had slept the night before in a draught and the wind had blown through his pajamas, he had caught a pretty severe cold. The word "pajamas" was a new one for the typewriter and she paused.

"How do you spell that word, sir?" she inquired.

"P-a-j-a-m-a-s," spelled the merchant, slowly, and added: "Didn't you ever have to write it before?"

"No, sir."

"Don't you know what it means?"

"Yes, sir," she murmured, hesitatingly; "I think I know what it means."

"Well, what is it?"

"It's French for whiskers."

And the merchant, in the kindness of his heart, smiled sweetly and told the young lady she had guessed it the very first time.—*The Lyre.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Aberdeen, Miss.—The Henderson Hardware Company has been incorporated; capital, $50,000; incorporators: W. S. Carlton, J. B. McFarland and others.

Apache, Okla.—Smith-Wagon Hardware and Implement Company has been incorporated with capital stock of $10,000. The incorporators are: John Smith, J. J. Wogan and J. S. Wogan.

Argenta, Ark.—Walter Lemmer will open a Hardware store in about ten days in the Lemmer block on East Fourth Street.

Baltimore, Md.—Joseph W. Nily will erect a store and warehouse at 121 South Street and will conduct a Marine Hardware business.

Baltimore, Md. — The F. H. Davidson Company has been incorporated to deal in Hardware, builders' supplies, etc., by Hannah E. Davidson, Augustus Quandt, Joseph W. Shirley, Edwin Cugle and David J. Scott, with a capital stock of $40,000.

Becket, Mass.—James B. Colt and John E. Stewart have entered the farm machinery and supply business under the firm name of the Becket Co.

Boston, Mass.—A. S. Morss Company, Hardware, has been incorporated; capital, $50,000; president and treasurer, George W. Campbell.

Chester, Pa.—D. P. Paiste is contemplating going in the Hardware business in this town.

Cincinnati, Ohio.—The J. M. McCullough's Sons Company, $250,000, has been incorporated by Albert McCullough, H. B. McCullough, George H. Parin, E. E. Lester and Dan Carmichael. They will deal in seeds, garden and lawn implements, etc.

Lane, S. D.—Geo. E. Whitney has opened a Hardware store. He owns the G. E. Loomis stock, which was moved from Worthing to this place. He will carry a $4,000 stock.

Norway, Mich.—W. M. Ramsdell has opened a new Hardware store.

Peoria, Ill.—Frank Brown will open a Hardware store in the near future.

Rock Island, Ill.—J. J. Burgess & Co. is a new firm who have just embarked in the stove, tin and furnace business at 322 Twentieth Street. They have a complete stock of stoves, ranges, gasoline stoves, refrigerators, washing machines, etc. In connection with their retail department they have purchased the furnace and tin and repair shop of R. G. Summers, who has been engaged to oversee this branch of the business for the firm.

Sherman, Minn.—A $50,000 company has been organized here for the purpose of operating a farmers' co-operative store. Officers of the new company are: President, P. O. Graves; vice-president, Wm. Bauer; secretary and treasurer, Ole Rislow; directors, Jacob Foss, W. S. Irish, Gust Olson, S. I. Megaard and H. E. Gellman.

Whitesboro, Texas.—Omohundro Hardware & Furniture Company has been incorporated; capital stock, $10,000. Incorporators: J. B. Omohundro, J. H. Omohundro and F. T. Omohundro.

Changes.

Arispe, Iowa.—Buir, Forbes & Son, dealers in Hardware, are erecting a store to be 20x130 feet.

Brownsdale, Minn.—A. E. Thompson and H. H. Skogen, of Blooming Prairie, have bought out the Hardware store here.

Champaign, Ill. — S. A. Dillavou has bought a half interest in the Goodman buildings and implement and Hardware stock. The firm name will be Goodman & Dillavou.

Chicago, Ill.—The S. D. Kimbark Co., one of the oldest Heavy Hardware firms in the West, has sold its entire stock of merchandise, accounts and the good will of the business to Kelley, Maus & Co., of this city. Kelley, Maus & Co. was incorporated in 1894 with a capital of $500,000.

Corning, N. Y.—The Hardware firm of Frost & Williams, of Corning, has dissolved and the business will be continued by Aaron F. Williams as sole owner.

Derby, Iowa.—J. K. Wolverton, Hardware and implement dealer, has disposed of his business to Amil Schmitz.

Elysian, Minn.—The Elysian Hardware Company has added a line of harness to their already extensive stock.

Fergus Falls, Minn.—A. E. Luedke has bought out Spiekerman Bros.' Hardware store and will consolidate it with his present Hardware stock.

Freeport, Minn.—Henry Blenke has purchased the implement business formerly conducted by Herm. Shoener.

Grafton, Wis.—Albert Kath has disposed of his Hardware and implement business to Clausing Blank & Co.

Hartford, Conn.—The Way Hardware Company has sold out its stock of goods to T. Jacobs & Co., of New York. The stock will be removed to New York and sold at auction.

Jasper, Minn.—Asker Bros., Hardware and farm machinery, are succeeded by T. S. Marshall, of Trosky.

Johnstown, Pa.—The Buterbaugh-Claycomb Company have commenced the erection of a 22x30 extension to their Hardware store. The addition will be two stories.

Kanawha, Iowa.—J. C. Petheram, dealer in Hardware, has been succeeded by Petheram & Leighton.

Langdon, N. D. — Kelly & McLaughlin will erect a two-story implement warehouse.

Los Angeles, Cal.—A. P. Janny will enlarge and rebuild his Hardware store. The new store will be a brick building with a fifty-foot front on Union Street.

Mabel, Minn.—Fred Donald has purchased the Hardware business of Lerin & Burreson.

Madison, S. D.—F. L. Kingsley sold his Hardware business to C. C. Sheldon & Son, of Spring Valley, Minn.

Marion, Ind.—Oscar A. Martin, who has conducted a Hardware store on South Adams Street for the past eighteen months, has sold his store to Humphrey Gauntt, and will retire from business. The deal was consummated on July 11th, and the new proprietor took possession at once.

Maroa, Ill.—C. W. Thompson is preparing to move his stock of Hardware to Iowa.

Mayking, Ky.—The E. H. Ould Company and Norton Hardware Company, two large wholesale Hardware concerns, carrying a $50,000 stock each, have consolidated. Besides their main office at Norton, Va., they will have branches at Corbin, Ky., Bristol, Tenn., Bluefield, W. Va., and Pikeville, Ky.

Memphis, Tenn.—Benedict, Warren & Davidson Company, wholesale Hardware dealers, will erect a warehouse to be four stories high, and its dimensions will be 100x160 feet. It will be of brick, with mill construction, and is to be erected on Clay Street. According to the plans, it is to be completed by the first of October, and will cost when finished between $30,000 and $35,000. The floor space will be about 160,000 square feet. Mr. Davidson, a member of the firm, stated that as soon as the building was finished it would be fully stocked with Hardware, and that his company would branch out into new territory and put on extra traveling salesmen.

New London, Ohio.—On June 27, H. G. Skinner, of the Hardware firm of Skinner & Allen, disposed of his share of the stock to Robert Carr.

Pasadena, Cal.—George N. Yant has purchased the Lichty Hardware store on South Fair Oaks Avenue and taken possession.

Plymouth, Iowa.—Holden & Holcomb will erect an implement warehouse.

Portage, Wis.—The Warner Hardware Company, L. F. Schulze, president, and Frank G. Schulze, secretary, filed an amendment changing the name to the Schulze Hardware Company and increasing the capital stock from $10,000 to $25,000.

Portland, Ark.—The Dean Hardware Company, whose building was recently destroyed by fire, are erecting a 50x150 warehouse for temporary quarters until they can rebuild.

Rake, Minn.—Anderson & Petters have sold most of their stock and will discontinue their machine and implement business here.

Schenevus, N. Y.—R. C. Mills, who recently sold his Hardware business here, has formed a partnership with Walter L. Brown, the Hardware merchant of Oneonta.

Sebring, Ohio.—M. H. Curtis, who recently purchased the Hardware store which had been conducted in Sebring by L. E. Heisler, has closed a deal for the transfer of the stock to W. P. Berry, of Beloit. Mr. Berry will at once move the stock to Beloit.

Tabor, Iowa.—Mawhor & Gowdy, Hardware and implement dealers, have disposed of their harness stock.

Topeka, Kan.—Pratt Brothers moved their Hardware and implement store from 820 Kansas Avenue to the Holman building at 901 and 903 Kansas Avenue, which they recently purchased.

Utica, N. Y.—Thomas L. Kingsley has withdrawn from the firm of Carey & Co. and has purchased the business formerly conducted by them at 72 Columbia Street. He will sell stoves, ranges, etc., and do a general repairing business along that line.

Waterloo, Iowa.—A contract has been signed that combines the business of the Waterloo Hardware Co. and the retail business of the Brown Buggy Co. The

THE HAMMOND TYPEWRITER

It may seem absurd to test each Bischoff Doorhanger with a weight of 2,200 pounds, but it shows the efforts we make to give you absolutely the best hanger on the market.

It is a good point to remember that this hanger will stand the rough usage of the farm and come out without a blemish. That is where the strength of the highly carbonized angle steel used in making Bischoff Doorhangers counts. Combine this strong point with the non-clogging, non-track-jumping features and you have the ideal doorhanger. Such is the Bischoff.

These hangers retail at $1.25 per pair, track 10c. per foot. **Our price to you $8.75 per dozen pairs, track 6½c. per foot.** Let us write you about a model display hanger.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published,

New Incorporations, Etc.

Albany, N. Y.—International Implement Co. (agricultural implements) has been incorporated. Capital $50,000, and directors: Charles La Dow, of Albany; O. D. La Dow and W. C. Smith, of New York city.

Baldwinsville, N. Y.—The "Syracuse Emery Mills" has been incorporated. The new company, which is to manufacture, sell, at retail and wholesale, emery wheels, Hardware and stove supplies, is capitalized at $10,000. The directors are: Joseph C. Jaques, Charles C. McCarty and Frank I. Samansky.

Cleveland, Ohio.—The Heat Appliance Company, capitalized at $100,000, has been incorporated by W. L. Rose, G. W. Harput, B. F. Stump, Louis J. Sloat and J. Hartman.

Cleveland, Ohio.—William M. Powell, formerly manager of the Ferrosteel Co. and later the organizer and treasurer of the Columbian Hardware Co., also of Cleveland, has just organized the Ferrokraft Co., which will be the successor to the patents and the good will of the Universal Fastener Co. As the name of the company implies, its employees are expert workers in iron, steel, brass and bronze. The business of the company will include the manufacture of the automatic springless catch and several other Hardware specialties.

Columbus, Ohio.—The Bennett Stove Co. has been incorporated. Boyce H. Bennett, O. B. Strauss, T. B. Paxton, Jr., J. D. Meeker and E. L. Stricker, incorporators.

Columbus, Miss.—The Standard Stove Works has been incorporated with a capital stock of $150,000, and with J. R. Saunders, W. T. Folsom, B. W. Weaver and other incorporators.

David City, Neb.—The Barker Mfg. Co. has been incorporated to manufacture garden and farm implements. Capital stock $15,000.

Elyria, Ohio.—The Cope-Schaible Manufacturing Co. has been incorporated by John Schaible, F. H. Cope, A. F. Ayres, Charles Schaible and Charles A. Metcalf; agricultural implements; capital, $100,000.

Louisville, Ky.—The Fox Manufacturing Company has been incorporated and will manufacture a flat-iron to be known as the Fox reversible sad iron. The capital stock is $600, and the incorporators are: Henry C. Fox, Forest B. Alexander, Warren W. Leahy, Ernest E. Hardaway.

Louisville, Ky.—The Kentucky Stove Company has been incorporated with a capital of $1,000,000.

McGregor, Texas. — Lyon Implement Company has been incorporated; capital stock, $10,000. Incorporated by F. M. Lyon, J. N. Bradshaw and F. P. Lyon, all of McGregor.

New York, N. Y.—American Desk and Tool Co. has been incorporated. Capital stock, $50,000. Directors: F. W. Dickerman, F. W. Robinson, W. I. Lee, New York.

New York, N. Y.—The Reichard & Scheuber Mfg. Co. has been incorporated. Objects, to manufacture razors; capital, $65,100. Incorporators: B. M. L. Ernst, New York; G. G. Handel, East Orange; G. Betterton, of Brooklyn.

Niles, Ill.—The National Wire Cloth Co. has been incorporated. The concern will engage in the manufacture of wire, wire cloth, screws, and all kinds of wire goods. It is capitalized at $50,000. The stockholders are all Chicago men. They are F. A. Hastings, C. K. Anderson, A. E. Dennis.

Oak Park, Ill.—Dearborn Hardware Manufacturing Company has been incorporated; capital $15,000; manufacturing Hardware and other specialties; incorporators: Robert A. Lackey, Martin E. Wood, James A. Billings.

Peoria, Ill.—After a thorough and complete investigation of the proposed plant the Peoria Business Men's Association has decided to endorse a plan by which the Peoria Steel and Tool Company, with a capital stock of $250,000, is to be incorporated and a factory which will employ about 360 men is to be erected in this city. In order to form this company three concerns —The Automatic Vise & Tool Company, of Akron, Ohio; The John Bergman Steel Company, of Pittsburg, and the Farnum Gauge-Shear Company, of Chicago and St. Louis, will be combined. These companies have been manufacturing automatic vises, bench, pipe and field vises, a line of improved cutlery and agricultural implement and tool steel. Under the proposed plan the machinery and patents, dies and patterns will be the property of the new company. A guaranteed dividend of 7 per cent., which shall be cumulative, will be paid. The parties who own the dies, patterns, patents and machinery have been in the supply business for years and are experts in their respective lines.

Philadelphia, Pa.—The McLewee Gas Lamp Company has been incorporated. Capital stock $25,000.

Philadelphia, Pa.—The United States Cutlery Company has been incorporated. Capital stock $50,000.

Pittsburgh, Pa.—Pittsburgh Automatic Wrench Company has been incorporated; $100,000; George H. Corey, Eugene Schooley and J. L. Cohencious, incorporators.

Pittsburgh, Pa.—The Stevens Safe and Lock Company has been incorporated. Capital stock $5,000. Directors: Walter S. Ravenscroft, Ridgway; John F. Weller, Joseph W. Stephens, Pittsburgh.

Scottdale, Pa.—The F. A. Black Manufacturing Company will build a cutlery plant here. Stock amounting to $60,000 has been subscribed for it, and the following directors have been elected: F. A. Black, M. S. Loucks, A. J. Gyer, J. U. Owens, T. W. Porter, A. B. Loucks and E. R. Loucks. The directors held a meeting and elected the following officers: F. A. Black, president; A. B. Loucks, vice-president; E. R. Loucks, secretary and treasurer.

Tiffin, Ohio.—The Sheet Metal Novelty Company has been incorporated by O. C. Van Kirk, N. O. Van Kirk, H. B. Gibbon, R. L. Gibbon and George M. Hoke.

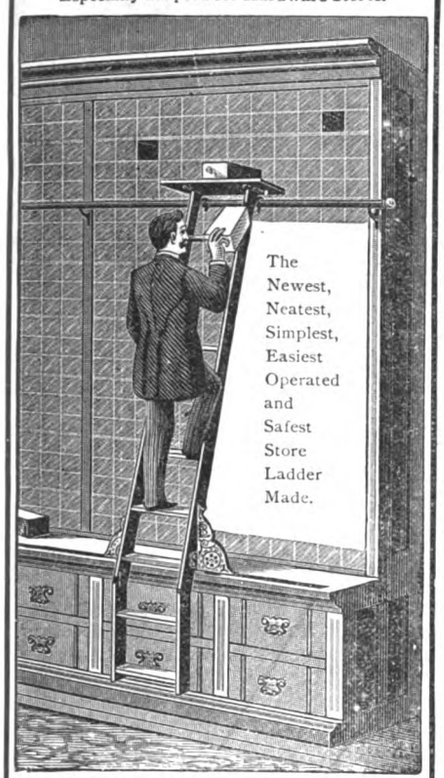
Utica, Miss.—A new spoke and handle factory began business during July. This is the only factory that has ever been in this town. The owners, Lewis & Currie, will add other lines from time to time. Everything that can be made out of hardwood will be made.

Washington, D. C.—The Circular Plow Co. has been incorporated. Capital stock $250,000. Incorporators: Charles S. Wilmeth, Henry C. Kauffman, Alta S. Winter, Adolph H. Fiegenbaum and Philip E. Winter.

Miscellaneous.

Boston, Mass.—The Ames Shovel Co. has declared a semi-annual dividend of $1 per share.

Bowling Green, Ky.—At the annual meeting of the stockholders of the Turner, Day & Woolworth Handle Company the following directors were elected: John Stites, J. W. Gaulbert, William Heyburn, Thomas McCulloch, William Reuter, of Louisville; W. L. Graves, Bowling Green; Harry M. Morrison, New York; E. G. Oates, Knoxville, Tenn.; Irving Hartzell, Huntington, W. Va. The company made a very handsome showing for the year, and the directors held a meeting at the close of the stockholders' meeting and declared the usual semi-annual dividend of 4 per cent. on the common stock. The following officers were elected for the ensuing year: Charles D. Gates, president; Thomas McCulloch, vice-president; Clarence F. Turner, secretary-treasurer.



Hartford, Conn.—At the annual meeting of the Acme Machine Screw Company, held recently, the old officers were re-elected as follows: President, W. D. B. Alexander; secretary and treasurer, A. W. Henn; assistant secretary and treasurer, H. R. Mills; directors: W. D. B. Alexander, A. W. Henn and H. R. Mills. The company is combined with the National Acme Machine Screw Company, of Cleveland, Ohio, and is not doing business now.

Terryville, Conn.—The annual meeting of the Eagle Lock Company was held here on July 26. The following officers were elected: President and treasurer, R. J. Plumb, Terryville; secretary, H. B. Plumb, Brooklyn, N. Y.; directors: R. J. Plumb, Terryville; H. B. Plumb, Brooklyn, N. Y.; H. L. Balch, New York; F. B. Wilcox, New York; W. T. Woodruff, Thomaston, O. B. Hough, Terryville; A. E. Hart, Hartford.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Chattanooga, Tenn.—H. Atwater has recently gone into the business of manufacturing and selling the Atwater Tire Puller, said to be the finest thing for pulling tires from wheels.

Chicago, Ill.—Roach, Hirth & Co. has been incorporated; capital, $50,000; manufacturing sporting goods; incorporators: J. E. Waters, E. W. Votawa, S. A. Harper.

East Peoria, Ill.—The Langton Lumber Co. have begun the installing of machinery in their new plant. The company will manufacture gun stocks and handle steam-dried lumber.

Grand Haven, Mich.—The Grand Haven Glove Company has been organized to continue the business of the old Burnham Glove Company of Chicago.

Jamestown, N. Y.—A company with a capital of $100,000 is to be formed in this city for the purpose of manufacturing soft rubber, such as pneumatic tires, solid rubber tires, rubber heels for shoes, floor mats, and the like. The brick factory on Jones and Gifford Avenue will be utilized for the rubber industry. The plant, it is expected, will employ about sixty men. Among those not residents of this city who are back of the enterprise are C. H. Walters, formerly with the Victor Rubber Company, of Akron, Ohio, and George W. Quinlan, once with the Vim Cycle and Hardware Company, of Buffalo. Both gentlemen are experienced in the manufacture of rubber goods.

Macomb, Ill.—The Macomb Novelty Company has been organized with a paid-up capital stock of $5,000, to manufacture a combination toy gun and top.

New York, N. Y.—The Cole Many-Use Oil Company has been incorporated by: President, George W. Cole; vice-president W. A. Graham; secretary-treasurer, G. A. Graham. Its offices are at 113 Chambers Street, New York city. The organizer, G. W. Cole, recently resigned active management of the Three-in-One Company that bears his name. But it was understood that he still remtains a financial interest in it. It is now announced that he has disposed of his interests in that company but that the product of the new concern will lubricate guns, bicycles, etc.

New York, N. Y.—The Manabo Manufacturing Company has been incorporated; capital stock $100,000. Golf balls will be manufactured.

Ottawa, Ont.—Sir Frederick Borden, Minister of Militia, has under way a contract with the English firm of which Sir William Armstrong is head, for the construction of an ammunition factory in Ottawa capable of turning out twenty million pounds of ammunition a year.

Rockford, Ill.—The Rockford Reel Company, with a capital stock of $2,500, has been incorporated to manufacture fishing tackle and reels. Incorporators are: William J. H. Strong, H. L. Strong, E. M. Jackson and F. K. Houston. These are all directors of the America Company of Rockford, manufacturers of America and America-Meek reels, and it is their intention, in forming the new company, to make fishing tackle and low price reels not permitted under the terms of the America Company's papers.

Yazoo Valley, Ohio.—Fred Essman will open a bicycle repair shop in the near future.

Shelbyville, Ind.—Charles Dudley, of Indianapolis, has opened a bicycle store on Seventh Street, where he will also do repairing.

Changes.

Ardmore, Pa.—The Auto Car Company is arranging to erect new machine shops.

Auburn, N. Y.—The Fay & Bowen Engine Company has removed to Geneva, N. Y., where it now has a large new plant on Seneca Lake and one of the State canals, also being in proximity to three railways which give unsurpassed facilities for shipping and obtaining supplies. This company builds launches as well as engines.

Chicago, Ill.—The Moran and Wolfersperger Gun Company has changed the firm name, and it will in the future be known as the Moran and Wolf Gun Company. The capital stock has been increased from $10,000 to $100,000 and the number of directors has been increased to five.

Defiance, Ohio.—The La Fave Gun Works, one of the most promising industries in this city, has been sold to Toledo parties, the majority of the stock being purchased by the Detwilers and Senator Cole.

Hazardville, Conn.—Within a few months the plant of the Hazard Powder Company, which has been in constant operation since 1835, will cease to manufacture the powder for which its name has been famous among the rifle shooters of the United States for several generations. About October 1 the material on hand will have been worked up by the plant and it will then be closed so far as the manufacture of powder is concerned.

Hopkinton, Mass.—Fryeburg Arms Company are preparing to erect a four-story addition to their factory, which will be 190 by 40 feet.

Middletown, Conn.—J. E. Palmer is building a four-story addition to his hammock manufacturing plant.

Muskegon, Mich.—The Racine Boat Company is preparing to build a new factory and an annex to its brass foundry.

Plymouth, Mich.—The machinery and stock of Globe air rifles recently purchased from J. A. Dubuar by the Daisy Air Rifle Company, is soon to be removed from the old plant in Northville, Mich., to Plymouth. Mr. Dubuar has engaged in other business. The Daisy Company is preparing to manufacture air guns on a large scale.

Richmond, Ind.—Barney Doherty has sold his business and stock of bicycles and sundries and accepted a position with an automobile company at New Britain, Conn., his home.

St. Louis, Mo.—The Monarch Rubber Clothing Company has changed its name to the Monarch Rubber Company and will enlarge.

Wilmington, Del.—The Ohio Powder Company's plant near Doughton, Ohio, has been purchased by the E. I. DuPont Company. The Ohio Powder Company had offices in Youngstown and was capitalized at $150,000. It is one of the most important plants in the Buckeye State.

Embarrassments.

Columbus, Ohio.—Walter B. Newhall, whose bicycle and supply store is at 23 East Gay Street, has made a deed of assignment to Harry H. Hawkins for the benefit of his customers.

Lancaster, Pa.—Horace B. Herr, trading as the Lancaster Cycle Company, H. B. Herr, manager, has been adjudged an involuntary bankrupt.

St. Louis, Mo.—William Krewinghaus, trading under the name of the A. J. Venz Sporting Goods Company, 213 North Eighth Street, on July 12 filed a deed of assignment covering all property, including stock of fishing tackle, sportsmen's goods, etc., valued at $1,000. A. M. Wood was named as trustee for creditors.

Yonkers, N. Y.—The certificate of the voluntary dissolution of the Empire Sporting Goods Manufacturing Company has been filed. The certificate of incorporation of this company was filed December 28, 1903, and papers certifying to the payment of half of the capital stock were filed February 1, 1904.

Fires.

Astoria, L. I.—The fireworks factory of Amzelone Joseph, located near North Beach, were destroyed by fire following an explosion on July 17.

East St. Louis, Ill.—There was an explosion in one of the buildings at the plant of the Phœnix Powder Company, between East St. Louis and Belleville, Ill., the morning of July 22 and John Humes, the only person in the building at the time, was instantly killed. The property loss was slight.

New York, N. Y.—Fire which started from some unknown cause in the three-story brick factory building at the rear of 708 East One Hundred and Sixty-sixth Street, on July 21st, did about $4,500 damage before the firemen could extinguish it. The fire started under the stairway on the first floor, which is occupied by the Graf Camera Company. On this floor between 600 and 700 cameras, nearly completed, were destroyed.

Miscellaneous.

Sterling, Ill.—John Peck has closed a contract for the coming year with the United States Government for the manufacture of walnut gun stocks for the Springfield rifle, used by the regular army and by the various militias of the State. The total amount of the contract is $85,000, and its terms are the same as those which Mr. Peck has previously made with the government. He has now more contracts on hand than ever before, and will this Fall double the capacity of his plant. It is his intention to build a new factory building.

AMES SWORD CO.,

CHICOPEE, MASS.

MANUFACTURERS OF

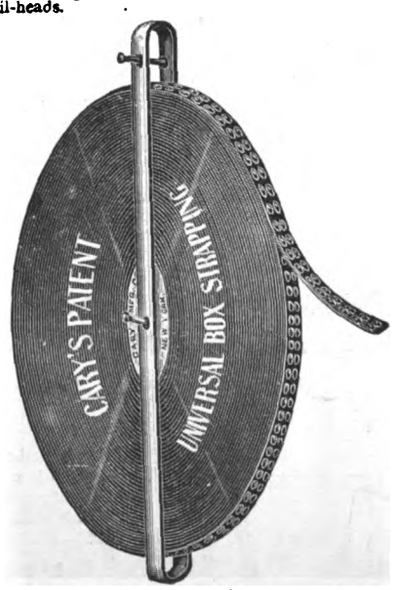
Patent Perfection Padlocks.

All sizes, ½ in. to 2½ ins. *Send for Catalogue.*

Federal Bench Punch

10 inches high, 10 inches long, Weighs 64 pounds

PUNCHES 5-16 inch hole in ¼ in. Iron plate, 2½ in. from edge. Send for Circular.



Chandler & Farquhar Co.,

131 Congress Street,

Boston, U. S. A.

CARY'S UNIVERSAL BOX STRAP

A continuous Metal Strap with a series of raised bosses along edges to strengthen it and to protect nail-heads.

Put up in coils 300 feet each.

Patent Metal Reel Frame with each coil.

Straps made in four widths: ½, ⅝, ¾ and 1 inch.

Patented in all countries.

CARY MFG. CO.,

19 & 21 Roosevelt Street, New York.

Cable Address: CARLEIO

The Best Point

in a "Spring Divider" of any kind is the perfection of its points. Among adjustment devices for mechanics and draftsmen our

"Excelsior" Spring Divider

leaves nothing to be desired on this score.

Its points are made of Stubb's Steel Wire, tempered and inserted two inches into each leg.

Nickel plated.

Unapproachable.

We challenge anyone to duplicate the quality and price of

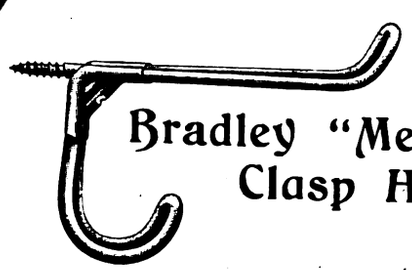
Colt's Clamps

in general, but more particularly our

UNIVERSAL CLAMP

* * *

It excels all hand screw clamps in adaptation to work, convenience of handling and quick action.



Comes in two sizes.

You ought to handle it. It's advantages over inferior clamps make it a ready seller.

Batavia Clamp Co.

Batavia, N. Y.

Bradley SHELF Bracket

and

Bradley "Metal" Clasp Hook

Are our two specialties, as yet unsurpassed as profitable Sellers

Better Goods than these cannot be secured anywhere for the same money.

Order direct or through your Jobber.

Atlas Mfg. Co.

New Haven, Conn.

SPECIAL OFFER: TOTAL ADDER CASH REGISTER

CAPACITY $1,000,000

Guaranteed for ten Years Free of Infringement.

Don't be Fooled

by the Picture of a cheap, low grade machine advertised by the opposition.

"WHAT THEY SAY"

Minonk, Illinois, April 11th, 1904.

CENTURY CASH REGISTER CO.,
Detroit, Mich.

GENTLEMEN:

We wish to state that we have one of your total adding Cash Register Machines in our Grocery Department, which has been in constant use every day for the last two years, and there has never been one minute of that time but what the Machine has been in perfect working order.

We can cheerfully recommend your machine to any one desiring a first-class Cash Register. Yours truly,

ALLEN-CALDWELL CO.
T. B. ALLEN, Sec'y.
Cash Dealers Dry Goods and Groceries.

MERIT WINS. We hold letters of praise similar to the above from more than one thousand (1000) high rated users of the Century. They count for more than the malicious misleading statements of a concern in their frantic efforts to "hold up" the Cash Register users for 500% profit.

SENT ON TRIAL. :: :: PATENTS BONDED.

THEY DO NOT CHALLENGE: as hundreds of merchants say, match the Century for less than $150.00

The National Company, by circulars, newspapers and through their agents, advertise our machine to contain tin adding wheels. Their statement is false. The wheels in our machines are made of the *best* quality of cold rolled steel.

We have placed $1000 in the Union National Bank, of this city, and *challenge* the National Company to put up a like amount, in the same bank. If they can substantiate their statement they take our $1000; if not, their $1000 is to go to any charitable institution in the state of Michigan. *Money talks.* Let them accept this challenge or acknowledge their statement to be untrue.

We use the best material that money can buy.

Write for our challenge competition offer against any $100 machine manufactured by the National Compaay, the insertion of which herein, limited space prevents.

White Hall, Ill., April 18, 1904.

CENTURY CASH REGISTER CO.,
Detroit, Mich.

GENTLEMEN:

Your salesman was here in February, 1903, trying to sell us a cash register. At that time we were not in the market for a machine. For several years we have used one made by the *Great Opposition.*

It was often out of repair, and when we would return it they would charge us from $5.00 to $25.00 for repairing it.

We sent your salesman to W. R. Wasson, of this place, and he sold him a cash register which gives entire satisfaction and has never been out of order.

You may send us one of your Century cash registers, solid nickeled case, with penny keys. Yours respectfully,

LOWENSTEIN & SON,
Wholesale and Retail Grocers.

The above is from the old established and well known firm of Lowenstein & Son, rated in Bradstreet's at $75,000.

We have received many similar letters from high rated merchants regarding those 500% profit machines.

Grand Haven, Mich., Aug. 1, 1904.

CENTURY CASH REGISTER CO.,
Detroit, Mich.

GENTLEMEN:

Please find check for last payment on our register. We are very much pleased with it. No money we ever invested gives better satisfaction or returns than the payment of our machine.

Yours very respectfully,
BOTBYL BROS., Grocers.

We Can Furnish the Proof. Hear What We Have to Say and SAVE MONEY.

SPECIAL OFFER: We have a plan for advertising and introducing our machine to new trade which we are extending to responsible merchants for a short time, which will put you in possession of this high-grade, up-to-date, 20th Century Cash Register for VERY little money and on VERY easy terms.

PLEASE WRITE FOR FULL PARTICULARS.

CENTURY CASH REGISTER CO.

658-659-660-662-661-663-669-670-672 and 674 Humboldt Ave.

DETROIT, MICH., U. S. A.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

OUR GASOLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.

"A Tough Proposition"

for a sledgehammer is the newest and best Screw-Driver on the market to-day:

THOMSON'S INDESTRUCTIBLE

It's the best proposition for you though, because it is, as its name implies, indestructible.

* * *

We don't just say it's indestructible—

We Guarantee

it's being so, because it's drop-forged from the best steel—cap, ferrule and blade, which is of one piece, extending through handle to cap.

* * *

Sizes 2½ to 30 inches.

* * *

WHY IS THE O.K.

The Best Rotary Washing Machine?

BECAUSE

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the **friction** and thus making machine so **light running** and almost **noiseless.**

2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).

3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without **rubbing** them to pieces.

4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.

5.—The tub has a wringer box fastened with steel brackets.

6.—The lid on the tub closes tight, **no escape of steam.**

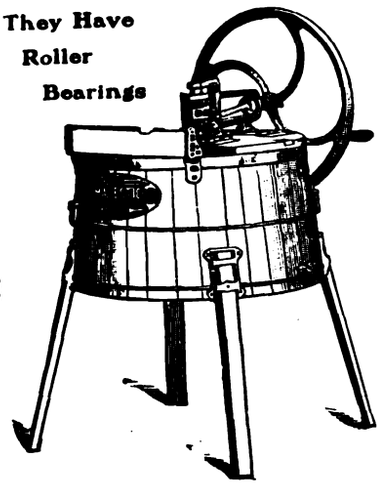
Rugged Old Honesty

Is sure to be found in the material, construction and usefulness of a new Washer—

The Rochester Rotary

Four hundred of them were sold in Rochester alone, last year. Each and all are still giving satisfaction because of their great point of superiority over other washers:

The Drum



revolving within the washer. It holds from 40-60 pieces, tumbles them round till they are thoroughly cleansed and—what is more—does it so easily and quickly that a child can do the washing without fatigue.

You ought to have our prices—they are attractive.

It Stands for Best Quality

H. H. Mayhew Co.
Shelburne Falls, Mass.

GENUINE BUCKEYE PRUNER

EVERY dealer should handle the Genuine Buckeye Pruner, because he can carefully push it to his best trade, in preference to any other pruner made.

Because it has stood the test of actual use for over 30 years.

Because it is the strongest made---the blades being hand-forged.

Because no other made cuts so easily.

It operates just opposite from other pruners. Grasp the limb with the hook, and cut towards you. It's quicker and easier than the other way.

Size 25—inch.

One dozen in a case.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

To-day their superiority over other makes remains unquestioned.

L. & I. J. WHITE CO., Inc.,
Buffalo, N. Y., U. S. A.

"Cheer Up and Seven Other Things"

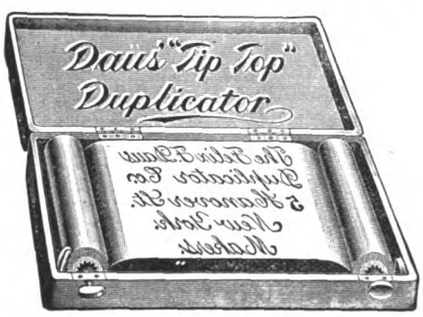
By CHARLES AUSTIN BATES.

"Charles Austin Bates always wields a vigorous pen, but his latest work "Cheer Up and Seven Other Things," contains eight of the most stirring business talks that have ever appeared over his name.

The titles "Cheer Up," "Making A Front," "Making Good," "Other Peoples Brains," "The Ill Fortunes of Brother Bill," "Things That Can't Be Done," "And All Is Advertising," and "How Shall A Young Man Succeed?" indicate the nature of the book. Rugged, straight-from-the-shoulder common sense is the keynote, yet the vein of humor running through every page makes it wonderfully entertaining.

The head of the firm can read "Cheer Up" with much profit, and every young business man who wants to make his mark will find the book worth many times the price.

"A small volume packed with sharp edged chunks of wisdom. Mr. Bates is an expert writer on advertising and what he does not know about the right way and the wrong way of advertising so as to attract public attention is hardly worth knowing.



"His bright little essays in the volume are all on the subject of advertising or business hints, and business men can hardly fail to profit while being entertained by reading them. Other people will also enjoy the little book for its practical wisdom and the cheerful spirit pervading its pages."—*The Cleveland Plaindealer.*

"In his own way Mr. Bates has the same kind of shrewd humor that made the "Letters From a Self-Made Merchant" so popular, and a good deal of the common sense business morality that marked the equally popular "Letter to Garcia." There are fun and snap in this little book."—*The Outlook*, New York.

HARDWARE

The Champion Steel Range Company, Cleveland, Ohio, are sending out a very handsome calendar covering the remainder of 1904 and the whole of 1905. The back, which is of heavy gray board, is ornamented by a fine half-tone of a very aggressive young football player, indicative, no doubt, of the hustling business methods of this firm. With the calendar is mailed a 16-page booklet containing illustrations of this season's lines of ranges made by this firm, together with much valuable information for the salesman, and a printed postal card to be used when asking for prices.

Some business men see impossible monsters and obstacles at every step, others a Golconda in every enterprise. Nothing will be accomplished by the impractical man of either sort because his vision is not clear; and of the two men, the sanguine has the better chance because of his enthusiasm, his bouyancy.

STOWELL MFG. & FOUNDRY COMPANY, South Milwaukee, Wis., has prepared a series of attractive exhibits for some of the State fairs which will be held during the next few weeks. The exhibits comprise a complete line of hay tools, ajax barn and acme parlor door hangers and side wall and floor registers. M. J. Evans will represent the company at the Illinois State fair, and also at the Milwaukee fair. John J. Dalton will look after the exhibits at the Minneapolis fair at Hambline and the Des Moines, Iowa, fair. James H. Dosser will be at the Indianapolis, Ind., fair, and also at the Ohio State fair at Columbus. W. L. Bigelow will represent the company at the Michigan State fair at Pontiac, and also at the Western Michigan fair at Grand Rapids.

Did you ever join a club or a lodge and become "Hail Fellow" with all the other members on the occasion of your first visit—or your second one? Didn't it require quite a number of visits before you reached the "Hello, John," stage? And still some merchants—and manufacturers—will put a quarter page ad. in their local newspaper, or trade journal, and then raise Cain because they don't get orders in carload bunches within a week after the first insertion. Getting into society and advertising are very similar propositions;—in both cases results depend on persistence and personality.

George Dyer says: "Men grow old and tired, but a business may always be kept young. An old business is an unpleasant sight because we cannot feel respect or consideration for its inferiority. Advertising is the perennial fountain of perpetual youth. Loss of aggressiveness and courage is a sign of old age in business, as are pessimism and conservatism."

FARWELL, OZMUN, KIRK & Co., St. Paul, Minn., issue a little pamphlet in which attention is called to their "Retail Dealers' selling Price List," which is used in connection with their General Hardware catalogue published a few months since. This price list is intended to assist merchants in the sale of goods which they do not carry regularly in stock. The pamphlet contains numerous letters from well-known Hardware merchants in which they endorse the Retail Dealers' Selling Price List.

THOMAS O'BRIEN, who was formerly with the Crawford Bicycle Company, and also for a number of years one of the traveling representatives of Schoverling, Daly & Gales, will in the future represent the Hopkins & Allen Arms Company, Norwich, Conn., on the road. His numerous friends will, doubtlesss, be pleased to know that he is again in the Fire Arms line.

On the first day of September, this year, F. E. Kohler & Company, of Canton, Ohio, start on their twenty-sixth year in business. During all this time, there has been no change of partners and the firm has established a reputation much to be envied, being now looked upon as leaders in the lines represented in their catalogue, which covers a line of post hole diggers and other similar tools, curry combs, and an excellent line of Hardware specialties.

The government of Algiers contemplates giving subsidies to Algerian farmers for the purchase of plows of modern construction. The governor-general of that French African Province has publicly called the attention of the natives to the advantages to be derived from using modern plows instead of the antiquated implements now in vogue there.

NEW YORK TRADING STAMP LAW UNCONSTITUTIONAL.

Supreme Court Justice Edwin A. Nash of the Seventh Judicial District, New York, has declared unconstitutional the law passed by the New York State Legislature at its last session regulating the issue of trading stamps and attaching a penalty for violating the act. In rendering an opinion the Justice declared that it is the settled law of this State that it is not within the power of the Legislature to suppress or regulate the issue or sale of trading stamps. The opinion was rendered in the case of Edward Appel, a cigar dealer who was arrested for selling a cigar and a package of tobacco, accompanied by tobacco coupons which did not have a redeemable cash value printed upon their face as required by the Trading Stamp law.

WISCONSIN HARDWARE INSURANCE.

At the recent combined meeting of the directors of the Hardware Insurance Co. and the executive members of the State Association held at Green Bay, the reports of committees and of the secretary were most encouraging. The Hardware dealers of the State are taking most enthusiastically to the insurance feature and the membership of the association is steadily increasing. The Republican House in Milwaukee was selected as the place of meeting for the next annual in February next.

It was also decided that all new members now coming into the association should, for their annual dues, have a receipt in full until February, 1906. The secretary was asked to represent the association at the Michigan meeting August 10 and 11, and expects to do so.

The insurance company has written, or has applications to write $323,000.00 of insurance, which appeared to be very satisfactory for four months work. There was a full attendance of both bodies and a program for the next annual meeting prepared that we think will be attractive and profitable.

C. A. PECK, *Secretary.*

A BEAUTIFUL CALENDAR.

"The Decisive Moment" is the title of the 1904-5 Calendar now being sent out by The Osborne Company, 31 Union Square, New York. This is one of the best examples from the brush of C. Allen Gilbert, one of the cleverest and most successful of the younger school of American artists. It is reproduced by this company's color-type process, directly from the original, which was one of over seven hundred submitted in the Osborne Company's $3,500 prize competition, and one of the twenty submitted for the vote on the popular prize of $1,000. This firm is recognized as the leader in the manufacture of calendars, and it is said that no other concern has ever reproduced such high class and valuable originals or so many of them, or presented so many new and original ideas. Copies of "The Decisive Moment" will be sent on receipt of 25 cents to cover cost of mailing.

A NOTE OF ENCOURAGEMENT.

The editor of *Hardware Hints* is very optimistic concerning Fall trade. He says: "Business men are advised to be prepared to be surprised with the volume of Fall trade. Advices received by a commercial agency, from centers of the country, indicate that apart from the usual Summer dullness, there is evidence of a better Fall trade than merchants have been planning for. A little dullness is expected at this time of year, and yet it is said that some industries report a demand for their products that outstrips their preparations to supply it. This is where many make a mistake, in not being abundantly able to care for business when it knocks at the door. There is every indication that the revival will be in evidence in a very gratifying way. The crop situation is cheering and presidential candidates having been selected, the worst of that bugaboo is over. Reports from the West and Northwest are more favorable as to crop conditions than a week ago. We repeat, get ready for it and get ready now."

NITROGLYCERIN.

Nitroglycerin, the strongest practical explosive known, was discovered by an Italian chemist, Sobrero by name, in 1846. As nitroglycerin is not safe to handle it is usually used in dynamite, which is prepared by kneading together 25 per cent. of infusorial earth and 75 per cent. of nitroglycerin until it assumes a putty-like condition resembling moist brown sugar. Nitroglycerin, if placed on the wrist or tongue, has the peculiar effect of producing a violent headache. It has a sweet, aromatic, rather pleasant taste, but cannot be classed as particularly healthful food.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review

Vacations have now about let up and soon everybody will be at their desks, and with renewed energy, from the strain of continuous hard work being gone they will be ready for the fray. There will be a resumption of business on every hand that will meet with approval from all concerned, as it will all have its bearings on Fall Trade. The feeling among the retailers seems to be of a more hopeful character.

There will be found a great degree of strength in present prices, even advances being strictly held to, will prevail when buyers are on the market making arrangements for Fall. Combinations are endeavoring to obtain a fair margin of profit on their wares, while existing conditions of light stocks and the presidential elections, ought to stimulate orders which will prove to be of that desirable fullness and completeness, which the ease of the money market would naturally expect and demand.

The labor market in too many cities which at present presents the appearance of work enough on hand to promise peace for months to come, is held by agitators in a state of turmoil that bodes no good for the future. Eventually there must be a reorganization on some solid ground that will put ordinary disputes in the way of a permanent settlement.

The crops are reported in every direction to be in excellent condition, with the exception of the wheat crop, cotton and corn crops being phenominal, and the dealers are looking forward to an excellent Fall trade in consequence. The wheat crop, about which a speculative condition is created, is touched with rust which will lesson its quantity and cause the harvest to be anything but promising.

The recent decline in the price of wire products is the result of excessive competition and warranted a change not quite so radical from a dealer's standpoint. The result will be, changes will be expected to run through a list of leading articles in the Hardware line, which certainly the trade will never see. Failing to get them they will constantly expect them and purchase accordingly. The orders meanwhile being limited in their nature, but frequent. Many manufacturers anticipated advancing prices on their products if conditions held out and they will feel a sense of disappointment over the adverse conditions that will prevent it. Collections are reported as being up to standard for the season of the year. The travellers on the road are sending home the usual string of orders, which cover a wide range, but are not large in quantities. The prospects are, there will be a heavy trade late, and the general result will be a satisfactory one.

MAIL ORDER TROUBLES.

So much has been said and written about the enormous profits in the Mail Order business that an article which appeared in a recent issue of a Mail Order publication comes as a distinct surprise. It states that a year ago there were in Kansas City eight mail order houses dealing in general merchandise, and that less than half of that number are still in business, and, "with possibly one exception, it is doubtful if any of these are making money." The article goes on to say that in St. Louis and Chicago, with a few exceptions, the case is the same. The reason for the trouble given is that there are so many firms handling the same lines of goods and working the same territory that the business is becoming overcrowded, and, "moreover, they are forcing the country merchants to keep larger and better stocks to hold their trade, and the public have learned, or is learning, that they can procure the ordinary lines of goods from their local dealers, and, furthermore, some of the retail stores are themselves making a bid for mail order trade, harping on quicker service and shorter express hauls."

This should act as a note of encouragement to those pessimistic individuals who imagine that in the near future the retail dealer will be put out of business entirely by mail order houses. We do not mean to suggest that the fight is over, not by any means; but the article mentioned above, printed as it was in a publication devoted to the interests of the mail order business, certainly indicates that life for the mail order man is not one continual round of pleasure and profit, and that persistence in a skillful, well directed fight and a continued exhibition of energy on the part of the retail dealer and improvement in his stock, will, in time, have the effect of bringing the mail order house up into the line of fair and sensible competition, or put it out entirely.

TRADING STAMPS.

A contributor to *Advertising World* advances a very sensible argument against the use of Trading Stamps. He says:

> In its strictest sense, the giving of trading stamps is, to thinkers in economy, an economical sin. There are many who give trading stamps who readily acquiesce in that assertion. Trading stamps seem to be a sort of parasite, living upon the proceeds of another's business, but adding nothing of value to any business that it doesn't take from the business of others. Some even go further and say that trading stamps *cannot* add value, and that their parasitical function is complete.
>
> Certain it is that if a merchant believes he must have a certain percentage of margin for profit and expenses, and his trading stamp cost is an item to be reckoned in, he is positively not getting the margin which he believed he must secure, when he bagan business. He can't have money and the cake. He can't have his profit and yet pay out more than he calculated upon doing.
>
> If he had a good business, began giving trading stamps, and gave them to all comers, the cost of those stamps must be great, and he must pay out a considerable percentage for them. The contention is that trading stamps cost so little for new trade. Perhaps that is true, and if a merchant only had to give them upon the new trade which they are supposed to bring, then there would be good reason, perhaps, for giving them. But when he

Digitized by Google

must give them—as he needs must—to old as well as new trade, then the cost runs up immensely, and the percentage is sufficient to knock a big hole in his week's money. Pretty expensive advertising, that.

Time was when they cost five per cent. on sales; now they cost all sorts of prices. Suppose a merchant increased his business a fourth, by using trading stamps, and then had to give them on the remaining portion of his business, what percentage does it take to do it?

Co-operation among merchants is all that is necessary to completely eradicate the trading stamp evil. Co-operation for any object is not easily brought about in some communities, but it would seem that any business man could become convinced that the giving of trading stamps is an unwise policy and that he would consent to join his neighbor merchants in driving out the evil. Retail dealers are everywhere joining hands in the mail order fight, it is difficult, therefore, to see why they should refuse to unite in this case.

THE MERCHANT AND THE TRADE PAPER.

Trade papers have for many years played an important part in the development of American business, and every year finds them more widely read than ever before. This is as it should be, only it is to be hoped that men in all lines of business will realize the possibilities to be derived from the careful reading of literature of this kind, and that they will give it the attention and support it so richly merits. When one considers what an immense amount of good trade papers have done, it is only surprising that so very few business men, comparatively, avail themselves of the many advantages and privileges placed at their disposal so generously and at such a reasonable price. While there are, of course, and always will be, papers of little or no value, there are, on the other hand, a number which are really good and helpful.

As a matter of fact, no business man can really afford to be without several good trade papers. It would, indeed, be well for him to subscribe for at least half a dozen just as soon as he can afford to do so, for then he will learn to discriminate between those which are good and those which are not, and the money which he spends thereafter for the purpose of keeping in touch with the methods and doings of those in other as well as in similar lines will be more likely to be invested wisely.

One cannot, however, acquire wisdom or knowledge by simply enclosing a check for the amount of the subscription. If this were the case, all men would quickly find themselves on an equal footing, business would be a continual joy, and trade papers would in very short order be nothing more nor less than insurers of business success at premiums ridiculously low. Which, interpreted, means that trade papers point the way, if one will only devote a small part of his time to reading them.

Few men are so busy that they have no time to read trade papers. The evenings at home cannot be spent to better advantage by him who wishes to achieve the greatest possible success, than in reading one or more in an understanding way. Right here comes the rub—in an understanding way. And it is because a great many men do not know how to read a trade paper, that they do not read them at all. They look for something which will fit their particular case, and if it does not immediately appear, they come to the conclusion that the paper is not worth while, and lay it down, to their own direct loss.

Now, the right way to read a trade paper or any other kind of paper, for that matter, is to place one's self in a state of mind which may be termed both perceptive and receptive. By doing so, one will perceive that which is of value and store it away where it may readily be found when wanted, instead of reading the articles as if they were just so much reading matter which must be read somehow or other. Then, that which may be read between the lines, so to speak, is often of much greater value than that which is printed, and the reader should always be on the alert to see and feel such things. Because an article is supposed to interest, primarily, retailers, is that any reason why a mail order man should not read it? Hardly, for it may contain a suggestion worth dollars upon dollars to him. To offset this, it frequently happens that retailers can learn much from what was intended in the first place, for mail order men.

So it is in all lines. Everywhere pointers abound. One need only train his powers of discrimination and all the wealth of thought from far and near is at one's service at a nominal price. And this wealth of information cannot possibly be otherwise than of decided benefit, properly used.—*Printers Ink.*

✤

Some people are foolish enough to imagine that they can improve upon nature, but that is laughable. If the Master Architect had had to wait for the men of science to tell him how to build the universe he would not have even the foundations started by this time.

THE HARDWARE TRADE IN THE NORTHWEST.

(*From our Regular Correspondent.*)

Summer trade has been a little more quiet than usual through the northwest, and fall business is not starting as early as it did last year. The lateness of the spring and the uncertainty of the crops in northern Minnesota and North Dakota are put forth as reasons for the excessive summer dullness. In speaking of trade conditions one of the large Hardware jobbers of Minneapolis said, "Yes, local business in Hardware is somewhat quiet, and orders from the country are not coming in as rapidly as we would like. The truth is that most dealers have been pretty well stocked, are carrying larger and heavier stocks than in former years, and when a little quiet times comes these dealers are pretty sure to make efforts to reduce stocks rather than to put in new lines or add to those carried. This will have a good effect on the trade in a short time. Stocks will be reduced, prices will come down some, and then, just as it has been in the past, it will seem that everybody, in all parts of the country, will want Hardware; and there will be just the same result as there always has been—*i.e.*, prices will advance, and those merchants—whatever jobbers or retailers who have kept stocks up, will be ones who will make the money."

In spite of the reported dullness in the Hardware trade up here it is a fact that the Twin City jobbers seem to be doing more business than ever before. This is especially true of the growing concern of Nelson, Bouquet, Holliday Hardware Co., of Minneapolis. The business of this concern has grown wonderfully during the past few years, and the firm last year moved into larger quarters, which now is hardlyl big enough to accommodate their growing business. Mr. Nelson, the senior member of the concern, is a practical, up-to-date Hardware man, as is also Ed. Bouquet. The credit end of the business is in the able hands of Mr. Holliday, who has had long training and experience in this line, and when necessity demands, is able to sell as big a bill of Hardware as any of the best drummers.

Heavy Hardware, iron and steel is the principal business of the Minneapolis Iron Stove Co. A large line of wagon, carriage and sleigh stock is also carried, and the trade in these goods extends throughout the northwest.

G. P. Derickson & Co., of Minneapolis, carry a very complete line of builders' cabinet Hardware, and devote their attention almost exclusively to this department of the trade, doing a wholesale business only.

One of the largest retail Hardware stores, and certainly the best arranged and most attractive in the northwest, is that of W. K. Morison & Co., of Minneapolis. Mr. Morison is no stranger to Hardware—his terse and accurate reports of business conditions in the northwest being familiar to all your readers. Mr. Morison is active and energetic and puts vim and life into his business—to such an extent that he has now the probably largest retail trade and certainly the finest retail store in the northwest. A strong believer in advertising, Mr. Morison lets the people know what he has to sell, and the price at which he will sell it—and the people of Minneapolis come to his store for Hardware. In addition to the retail business quite a local jobbing business is carried on. Mr. Morison said that he had no fault to find with his business—that trade was good. He is that kind of merchant who makes business.

The wholesale concern of Janney, Semple, Hill & Co. carry everything the retail Hardware merchant ought to sell and cover a large territory through the Northwestern States.

A well arranged and roomy store is that of the Gardner Hardware Co., who carry a complete line of builders and cabinet Hardware, and do a large business in bicycles as well.

Another Minneapolis retail concern having a well fitted store is the Warner Hardware Co., who were recently displaying a very atractive line of fine tools. In this line and cutlery the Warner Hardware Co. do a very nice trade.

St. Paul always has been spoken of as the great jobbing centre of the northwest. Here is located the big Hardware house of Farwell, Ozmun, Kirk & Co., who have recently made a departure in Hardware catalogues by issuing a price list giving the retail Hardware man the price at which any given article in Hardware can be sold. The scheme on the part of Farwell, Ozmun, Kirk & Co. will give the retailer a chance to get some of the business on higher priced goods, and slow selling articles which he could not afford to carry in stock—and which trade has oftentimes gone to the catalogue house—because the retailer had no way to make a price when his customer asked about the article, and by the time the dealer could write for the price, the consumer had ordered from catalogue house direct. This new departure of Farwell, Ozmun, Kirk & Co. ought to bring a lot of mail order business.

Here also in St. Paul is located Hackett, Walther, Gates Hard-

Digitized by Google

ware Co., who are successors to that old-established concern—the Hackett Hardware Co.

Dealing exclusively in heavy Hardware and blacksmith and wagon builders supplies, Nichols, Dean & Gregg have built up a large, strong business. Mr. Gregg, who was recently admitted into the firm, is a practical man, having worked up through all departments of the business.

Although not dealing directly in Hardware, W. R. Burkhard & Co. are closely allied to the Hardware business—being manufacturers and jobbers of sporting goods and selling much in this line to the Hardware man. This concern reported the trade in sporting goods as constantly growing—Mr. Burkhard said: "Each year there are more men who take a vacation by going fishing or hunting—and each year the demand for sportsmen's supplies increases."

Doing both a retail and jobbing business, Adam Decker & Co., of St. Paul, carry a good stock of general and shelf Hardware. The wholesale trade is confined to local business, being mostly done in the smaller towns near the Twin cities.

There is a story told showing the energy of A. M. Marshall, president of the Marshall-Wells Hardware Co., of Duluth. Not many years ago, when the concern was just beginning to feel the growing strength of youth, Mr. Marshall was showing a friend the firm's territory. It then covered Minnesota and the Dakotas. With a sweep of his hand Mr. Marshall said: "And this will all be ours," pointing from Hudson's Bay to the Gulf of Mexico, from the great Lakes to the Pacific Ocean. After making some headway in Canada a branch house was established in Winnepeg. Then the coast trade was pushed and finally to better hold this far western trade a modern warehouse has been built in Portland. The trade are asking where next will the Marshall-Wells Hardware Co. establish a branch. Mr. Marshall is demonstrating that the territory named would be his. A very neat and up-to-date monthly—*The Zenith*—is issued by this concern. Claude H. Hare is the editor and has shown his ability as a magazine maker.

STORE OF HUBERT HARRINGTON, FARGO.

An attractive retail store of Duluth is that of the Kelly Hardware Co. The store is large—and having good windows, which are well used to display goods.

The Kelly-Howe-Thompson Hardware Co., of Duluth, are now doing an exclusively wholesale business and are constantly adding new departments. A very complete and up-to-date loose leaf general catalogue has recently been issued and is bringing in no small amount of mail orders. Mr. Howe reported business as in a very satisfactory condition and said that the outlook was good for fall and winter trade.

Over in Fargo, N. D., the Hall-Robertson Hardware Co. have recently moved into their new and up-to-date warehouse. This building being erected especially for the business is most convenient and splendidly arranged for the rapid handling of Hardware orders. The Hall-Robertson Hardware Co. are wholesale exclusively and have recently issued a new 1,200-page catalogue, the firm's trade being largely in a farm and ranching country, an especially strong line of farming tools is carried.

The retail business of Fargo is largely looked out for by Hubert Harrington, whose store is a model in neatness and arrangement. Some Eastern Hardware men might look at Fargo as the jumping-off place, and it may surprise them to know that here in a small western city is to be found a Hardware store that would be equalled by few in our eastern cities. The photograph does not do justice to Mr. Harrington's store.

The lower Hardware store is that of the Fargo Hardware Co., which is well stocked with general Hardware. A good line of farm and garden tools is carried.

Fargo is in the midst of the wheat country and the dealers there are pleased with the outlook. "Crop is fair and prices are big, and that will bring a lot of money our way, and that is what we need" was the way one of the Hardware men put it.

Hammernail.

THE "ELK" WASHING MACHINE UNDER INJUNCTION.

The H. F. Brammer Mfg. Co. have shown us a printed copy of the decree entered in the United States Circuit Court for the District of Nebraska, in their suit against the International Manufacturing Company of Omaha, for patent infringement showing that the "Elk" machine which they have been putting on the market is under injunction. They are mailing the accompanying letter and copy of decree to dealers in general, but it is possible that some may be overlooked, and as it no doubt will be of interest to know of this, they suggest that we mention the matter in Hardware:

> Gentlemen: We enclose herewith for your information a printed copy of the decree entered in the United States Circuit Court for the District of Nebraska in our suit against the International Manufacturing Company of Omaha, for patent infringement by which you will see that the "Elk" machine which they have been putting on the market is under injunction. If you have been handling this machine in the past we herewith caution you against doing so in the future, or disposing of any such machines that you may have in stock, and your neglect to observe this notice will require us to enforce our legal rights against you. We wish to call your attention to our O. K. Washing Machine, which has been on the market since 1898, guaranteed in every particular, and is handled by the leading Hardware jobbers. Enclosed please find booklet describing the O. K.
>
> Yours truly,
>

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED AUGUST 9, 1904.

367,843. Pruning Shears. George R. Pierce, Knoxville, Tenn.
367,881. Lifting Jack. John B. Winn, Watertown, Dak.
367,928. Folding Hoop for Landing Nets. James Reed, Cambridge, Mass.
367,973. Wagon Jack. Nathan L. Hakes, Granon, N. Y.
367,998. Door Hanger. Joseph L. Parks, Toledo, Ohio.
368,003. Spokeshave James H. Polhemus, Brooklyn, N. Y.
368,072. Stove Cover and Lifter. Francis M. Collins, Troy, N. Y.
368,092. Vegetable Slicer. Melbourne L. Keach, Waterville, Conn.

PATENTS ISSUED AUGUST 9, 1904.

766,827. Glass Cutter. H. F. Hughes, New York, N. Y.
766,933. Garden Tool. N. W. Coon, Alba, Mich.
766,934. Tool Rack. J. W. Danhour, Huey, Ill.
766,939. Monkey Wrench. J. Doyle, Cononsburg, Pa.
766,944. Ax Head. W. Hatcher, Ruleville, Miss.
766,959. Facing for Heads of Fishing Reel Frames or Spools A. F. Meisselbach and W. Meisselbach, Jr., Newark, N. J.
767,001. Door Holder. C. A. Mann, Buffalo, N. Y.
767,053. Fly Catching Device. H. Haner, Cleveland, Ohio.
767,257. Step Ladder. G. L. Banks, Santa Ana, Cal.
767,295. Combined Door Spring and Check.. *J. L. Larimer*, Chicago, Ill.

PATENTS ISSUED AUG. 16, 1904.

767,386. Potato Slicer. C. Canclini, Sonora, Cal.
767,433. Window Screen. H. W. Peightal, Denver, Col.
767,441. Fly Excluding Attachment for Screen Doors. J. M. Robinson, Hastings, Neb.
767,450. Valve Mechanism for Basin Outlets. A. A. Soderlund, Somerville, Mass.
767,630. Carpet Renovator. M. H. Collom, Denver, Col.
767,641. Saw Holder. T. D. Gayle, Council Bluffs, Iowa.
767,650. Device for Cleaning Windows. C. Levy, New York, N. Y.
767,696. Stopping Machine. O. Kampfe, New York, N. Y.

RECENT TRADE PUBLICATIONS.

The Savage Arms Company, Utica, N. Y., are the authors of an attractive envelope-size catalogue devoted to the exploitation of all recent additions to their line of the Savage Hammerless Rifles. A glance through their catalogue convinces one that Savage rifles are different from those of other makes. Their outward appearance is similar to other rifles, but the Company claim that it is not in outward appearance they excel—it is in quality and mechanical excellence. Besides being entirely safe and accurate shooters, each arm is beautifully finished, and sold under an honest guarantee. The company request sportsmen who do not own one of their own rifles, to give them an opportunity to convince them that a Savage will give better service than any other kind. They maintain a special department devoted entirely to sportsmen, and always at their service. They offer to help in the selection of a rifle, and will give useful practical suggestions.

Dana & Company, Cincinnati, Ohio, manufacturers of the Peerless Iceland Freezer, have distributed among the trade a neat and attractive pamphlet catalogue, illustrative and descriptive of their product. On the cover of the book is represented five very inviting plates of ice cream. The book is well gotten up and contains sixteen pages. It is finely printed on excellent paper and illustrates several styles of Peerless Freezers, including one photographed with wrapper on just as it appears to a customer; one with fly wheel, furnished with crank; a twenty-five quart freezer with power attachment, and a forty-quart power freezer; also one of the Frezo freezers, which makes ice cream in four minutes. This freezer has full size tubs and cans. Tubs are made of the best quality of lumber and cans of the strongest and best coated tin plate. The dasher is of an improved type, having double scrapers. The Frezo is turned by gears fastened on the can top, and is the best constructed freezer of this type. The rim on the bottom of tub top projects down and covers the gears, so that no salt or ice can get in between the cogs or in the can. The can may be revolved to harden the cream after the dasher has been removed. The tubs are wrapped in heavy black paper, and are attractively labeled. Made in all sizes from one to twenty-five quarts.

James L. Taylor, 30 Lawrence Street Newark, N. J., have issued an envelope size pamphlet catalogue, being their No. 5, which is a revised price list, dated May 1st, 1904, and cancels all previous lists. The book is devoted entirely to the exploitation of the Taylor quick-adjusting self-locking screw clamps, which, after a series of experiments, and much expense of time and money, have been perfected and placed on the market, and have met with unqualified approval by mechanics, wherever introduced. They have now passed the stage of experiment, thousands of them being in use, some of them for over four years. These clamps have been severely tested by the United States Government at the Brooklyn and Charleston Navy Yards, and, they claim, have been pronounced the best clamps that have come to their notice. A very severe jarring strain was applied. As a result of the tests an order for a considerable quantity of the clamps was received. Every clamp is warranted.

N. & G. Taylor, Philadelphia, Pa., of "Taylor Old Style" tin roof fame, have issued "Ye Eighth Arrow of Ye Second Quiver" attractive and interesting as usual. Rufus the Roofer talks on the longevity of the Taylor Old Style in an interesting manner, giving many a humorous anecdote to make the story entertaining as well as instructive. Several pages in the little booklet are devoted to testimonials reflecting great credit on the authors of "The Arrow," showing the good opinion in which it is held, and the reputation it has attained by the several trade papers who have had the pleasure of reviewing it.

The G. W. Cole Company, 218 Washington Life Building, New York, N. Y., makers of the "Three-in-One" oil, have issued a very clever pamphlet entitled "What the Big Guns in the Gun Business Say," having reference to the "Three-in-One." The book bears out this title substantially, containing, as it does, very fine testimonials from the leading gun manufacturers of the country. "Three-in-One" oil removes all residue of black and smokeless powder after shooting, and prevents leading and pitting. It cleans and polishes the surfaces of stock and barrel. It is, they claim, a sure rust preventive—a thin coating will protect the metal in all climates. It sinks into the pores of the metal. It lubricates the mechanism and does not gum or dry out. "Three-in-One" contains no acids. Their little book is accompanied by a circular containing a series of nine good ads. for live dealers, which will help them to sell the "Three-in-One." Ads. Nos. 1, 2, 3, 4 and 5 are so arranged that the dealer's name and address is simply added at the bottom. Nos. 6, 7, 8, 9 and 10 are readers, to be used as local notices in papers. The reading ads are not electrotyped. All the others are and the G. W. Cole Company will furnish, free of cost, as many electros as desired of part or all, requesting only that the number of the ad. be specified. Send for the above literature.

Webster & Perks Tool Co., Springfield, Ohio, have issued an envelope size pamphlet catalogue, emanating from their Trimmer department, being an illustrated and descriptive catalogue of the Simplex Trimmer and also of paper hangers' tools. The pamphlet has an appropriate cover, being an imitation of a design in wall paper. Their Simplex Trimmer, they claim, is indusputably the most simple wall paper trimmer on the market, as its name would indicate, they having reduced the number of parts to the minimum. It is also lighter, yet stronger, they claim, than any other, since every part except the main frame proper, even to the smallest screw, is made of steel and hardened, which construction makes years of wear practically imperceptible, and thereby insuring its cutting true to the straight edge at all times. The book, which contains much information on the subject of paper hangers' tools, will be forwarded upon request.

A FEW WORLD'S FAIR EXHIBITS.

The Wagner Manufacturing Co., Sidney, Ohio, have a very unique exhibition at St. Louis. The interior of the booth represents an old kitchen of about the Louisiana Purchase time. The mantle, shelves, cupboards, etc., are laden with an attractive display of modern ware, making an interesting contrast. As a souvenir this firm is giving to those who will visit the booth a facsimile of the first iron kettle cast in America. The original was made in Lynn, Mass., in 1642. The Wagner exhibit is at 56 Fifth street, Palace of Manufactures.

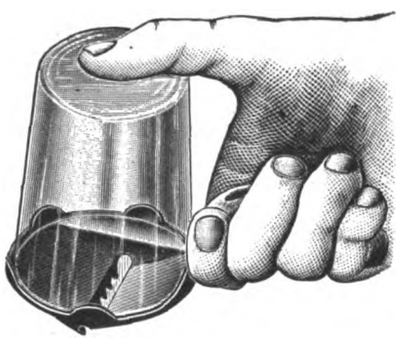
The Oneida Community, Kenwood, N. Y. exhibit includes a model of the company's plant in size about three by eight feet. A photograph of Samuel Newhouse, the founder, is shown, and almost every conceivable style of traps from the smallest to one with jaws three feet long. There is also shown a peculiar device of wood by means of which Samuel Newhouse rifled his own guns in 1845.

The Savage Arms Co., Utica, N. Y., exhibit in the Manufacturer's Building Savage rifles of every conceivable form and finish tastefully arranged on a four-sided pyramid, with the counters around the sides of the booth filled with ammunition, firearms and parts of tools.

The Simmons Hardware Co. show in the Manufacturer's Building an immense tower made of axes of the Keen Kutter Brand, and an arch formed of knives, carvers, auger bits and chain, with the name of the firm formed of door-locks. The standards of the fence around this space are sledge hammers.

A. Buch's Sons of Elizabethtown, Pa., show their "Eagle Steel" and other lines of lawn swings in the varied industries building, and in the same building is an exhibit of the roller swings made by The Hutchins Roller Swing Company, of Alton, Ill.

In the Palace of Agriculture, Section 14, is the large and very attractive exhibit of the Walter A. Wood Mowing & Reaping Machine Co., of Hoosick Falls N. Y. In the booth are shown a New Century grain binder, a corn binder, several types of mowers, reapers, rakes and tedders; a gold plated aluminum watch charm is given out as a souvenir. The exhibit is in charge of Benjamin G. Ladd assisted by W. C. Engel.



The exhibit of Landers, Frary & Clark, New Britain, Conn., is the first one seen on entering the central entrance of the Palace of Varied Industries, being located directly in the centre of two streets. The walls of the large booth (a building in itself) are made up of mahogany cases showing samples of the almost endless variety of cutlery made by this firm.

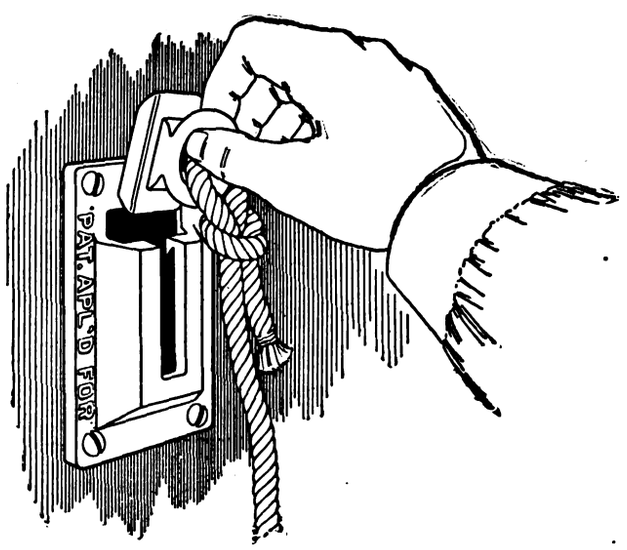
NEW GOODS AND SPECIALTIES.

THE HANDY HOUSEHOLD ICE SCRAPER.

A. E. Faber, Jr., Plainfield, N. J., is offering the trade the Ice Scraper shown in the accompanying cut as an article the utility of which cannot be questioned. The Scraper which is referred to as

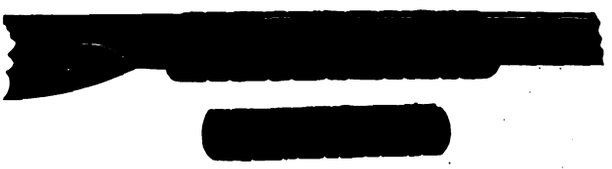


THE HANDY HOUSEHOLD ICE SCRAPER.

being built upon scientific lines, is coated with aluminum bronze, and presents an attractive appearance; while the absence of an iron cup reduces the weight, in its construction, the catching of dirt is greatly lessened.

A NEW CLOTHES LINE FASTENER.

A most convenient article for the housewife is the Perfection Clothes Line Fastener, manufactured by W. H. Glenny & Co., Rochester, N. Y. It is a malleable casting, black japanned and is intended to sell at retail at twenty-five cents per pair. The illus-



PERFECTION CLOTHES LINE FASTENER.

tration given herewith will give an idea of the convenience that this novelty adds to the handling of clothes lines. A sample fastener will be sent to any dealer free on request.

A NEW HAND SHIELD.

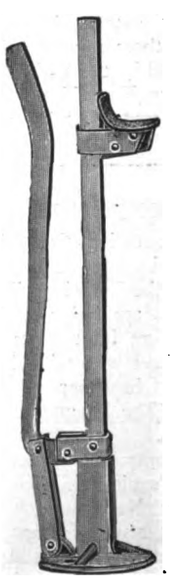
The J. Stevens Arms and Tool Company, Chicopee Falls, Mass., have just brought out the "Stevens Hand Shield," which is intended as a protection against excessively hot barrels on single barrel trap guns. This hand shield is especially adapted to Stevens single barrel guns, Nos. 185, 190 and 195, with top ribs, as illustrated on page 69 of this firm's catalog No. 51. It is made of black walnut, nicely scored at intervals so as to afford a good grip, and is bored with a taper so that it fits firmly to the barrel. The top of the shield is open and is held securely on the barrel by friction against the sides of the top rib. The shield is very light and adds practically no weight to the gun. At present it is made only in one size for 12-gauge shotguns, and is about seven inches in length, with an outside diameter of 1⅜ inches, the inside diameter tapering from 1 inch to 15-16. The width at the

STEVENS HAND SHIELD.

opening at top where friction against the rib holds the hand shield to the barrel, is ⅝ inch, tapering to 11-32 inch. The price is $1.50. The accompanying illustration shows the Stevens Hand Shield on barrel and off.

THE LITTLE SHAVER.

The J. M. Mast Mfg. Co., Lititz, Pa., have an excellent line of specialties and are almost continually getting out new ideas. One of their latest is an extremely useful kitchen specialty, "The



THE LITTLE SHAVER.

Little Shaver," which we illustrate herewith. It will slice potatoes, cucumbers, apples and all smaller fruits and vegetables, and will shave chocolate so thin that it dissolves without stirring. It is made of black walnut with a knife of fine tempered steel, and is shipped, one dozen in a paper box, one gross to a case.

THE "PEARSALL" JACK.

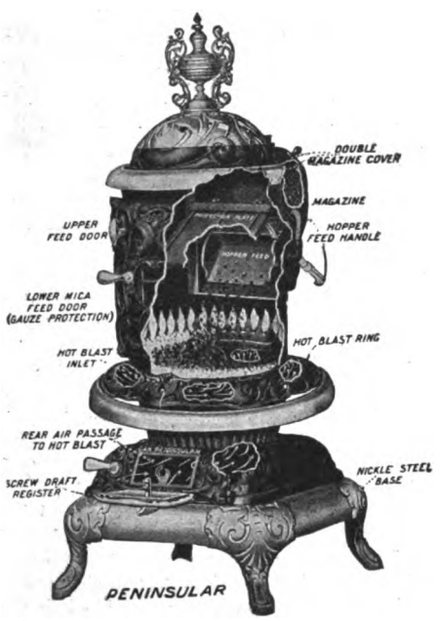
The Pearsall Mfg. Co., Syracuse, N. Y., are placing on the market the "Pearsall" Jack, of which we present an illustration. It is referred to as being made of the best steel and among the

THE "PEARSALL" JACK.

lightest jacks on the market, weighing six pounds and guaranteed to lift as much as any other jack and as easy to operate. It is all metal. Carriage jacks are japanned and the auto jacks are nickel plated and polished to a fine finish. The latter is 15 inches high, and is provided with a folding handle so that it can be put in a

Digitized by Google

small space and easily carried in an automobile. This jack can be quickly adjusted to the one-hundredth part of an inch if necessary. There are no ratchets used in this device.

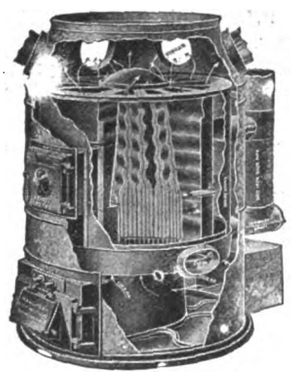


PENINSULAR HOPPER FEED HEATER.

Among the leaders in the Heater line manufactured by the Peninsular Stove Company of Detroit, Chicago and Buffalo,, their latest is the Peninsular Hopper Feed Heater, of which we present illustrations exhibiting its many good points. This is a new soft coal specialty, just placed on the market, and as the sectional cut shows plainly is something different from anything here-

PENINSULAR HOPPER FEED HEATER.

tofore offered the trade. The many successful tests made, have convinced the manufacturers that the hopper feed idea thus applied will eventually revolutionize the trade on soft coal stoves. It is claimed that this is the only soft coal magazine stove that will successfully burn all fuels, slack coal, soft coal, hard coal or stick wood. Particular attention is called to the fact that the magazine is outside

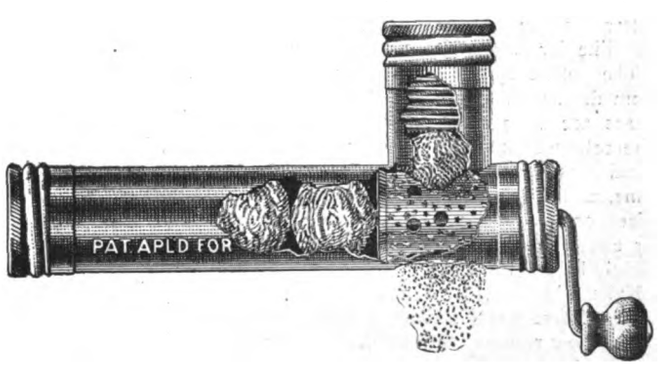


PENINSULAR HEATER, SECTIONAL VIEW.

of the stove, and is cut off from heat and flames by heavy cast protection plates with air space between, with result that coal in magazine is always fresh and cool, retaining every unit of its heat-giving qualities until fed without opening door. An upward movement of the hopper feed handle throws open the protection plate or door to magazine, and the hopper feed distributes coal over the fire surface more evenly than a shovel. This results in perfect combustion of fuel, ensures greatest possible radiation of heat, and makes what is said to be the cleanest and most perfect soft coal or slack burning stove on the market. There is no possibility of smoke in the room when feeding, as the door is not opened; the coal is fed entirely from the inside and a look through the large cheerful mica illumination shows at once if the fire needs fresh coal, and a single movement of the hopper feed handle does the work. It is extremely simple and easy to operate; clean and economical. Ask the manufacturers for catalogue giving further details.

THE KELSEY GENERATOR.

The Kelsey Heating Company, Syracuse, N. Y., claim the Kelsey Generator is unlike any other heater because of its capacity for warming great quantities of air and distributing it evenly. This is accomplished by sending the air in separate channels through corrugated cast iron flues or sections which surround the fire.



THE KELSEY GENERATOR.

We show herewith a cross-sectional view of the Generator. The ash pit is fitted to the base with a cup joint, making the escape of dust impossible. The grates are the Smyth pattern, having four revolving triangular bars. The corrugating cast iron flues, the reason for the great efficiency of this generator, can be seen in the illustration. There are from nine to seventeen of these flues in each Generator, according to its size, and they are placed upright in the Generator around and on the lower deck, just above the grate surface. The average length of these flues is thirty-six inches and each flue has eight square feet of heating surface. A handsome booklet giving a complete description of this Generator and showing several illustrations of different styles, together with convenient tables of dimensions and capacities will be mailed to any dealer on application.

SNYDER'S HANDY NUTMEG GRATER.

We illustrate herewith Snyder's Handy Nutmeg Grater, manufactured by J. Edward Snyder, Massillon, O. A glance at this cut really tells its story. Its magazine holds a half dozen nutmegs and it will grind the complete nutmeg without a particle of waste

SNYDER'S HANDY NUTMEG GRATER.

In construction it is simple, strong and durable, and retails readily at twenty-five cents with a liberal profit to the dealer.

The merchant or manufacturer, the industrial or professional, the manager or operator, who assumes to "get on" without the trade journals directly or collaterally bearing on his particular specialty, is seriously handicapped in the stress of competitive strife. Wilfully, though perhaps not wittingly, he deprives himself of sources of information and of material for progress and profit, lack of which must inevitably leave him in the lurch.

OUR NEW ORLEANS LETTER.

(Special Correspondence.)

Developments during the past fortnight have been by no means what the Hardware trade looked for, and the pleasant hopes stimulated by the brief stir in business in the early days of August and the last weeks of July have almost died away.

For the nonce the trade is frankly at a loss to understand the situation, and is casting about for explanations for the dullness which is apparently without a cure by any ordinary means. The crops are good. The labor troubles are becoming adjusted. The lumber region is resuming activity, and yet the country demand from the section of which New Orleans is a barometer has not increased in the proportion which was expected. The drop in nails, in heavy goods, and indeed, in manufactured articles of the heavier sort, instead of stimulating demand, has served to deaden it, while the country jobbers apparently await still further declines.

A round of the local jobbing houses yesterday failed to elicit any cheerful comments, although a fortnight ago smiles everywhere preceded confident announcements that the last days of August would witness a brisk resumption of business after the extraordinarily dull summer.

Some say that it is politics. Some say that it is the over-purchasing done by all branches of the trade last season. Some simply swear and offer no explanations whatsoever. This condition of affairs applies to all general Hardware lines in the wholesale houses. The local dealers have profited better by the approach of autumn than have the wholesale men, this due entirely to local conditions which have shaped themselves much better than was anticipated.

The history of the Hardware trade for the summer has been very peculiar, if the local men are to be believed. When the long continued spring trade died away in June, it was almost into July before the big houses quite grasped the fact that the summer trade of 1904 was going to be no better than that of the preceding summer. This was unpleasant realization, when the winter and spring trade has ranged fully twenty-five per cent. better than that of the winter and spring before. As was told in Hardware a month ago, the trade expected this condition of affairs to better itself with the approach of autumn, and two weeks ago signs of the betterment were detected in the renewal of operations through the lumber belt, and the promised demand for mill supplies. The cotton crop reports were good, and it was thought that the planters would begin buying with the first cotton picking. This forecast included in its scope the trade of nearly all Mississippi, all Northern Louisiana, and part of Eastern Texas. When the rice movement opened briskly, and the cane crop showed up at least thirty per cent. better than at a corresponding season one year ago, the entire section tributary to this city was included.

The Hardware men sat back and waited, fitted up their offices and sent their drummers on the road. The trade has not come. The sawmill men have rocked along with the outfits they had when they shut down last spring. There had been no long summer run to wear out their machinery and mill supplies, while better than in July have barely run even with the business in that line for August, 1903.

The cotton belt has not begun to purchase, and the reports from drummers are to the effect that the jobbers in the smaller towns are very chary about stocking up to any great extent. The cotton section had overpurchased last spring, but a big demand was expected for higher grade material. This has not come, and it is said that the dealers speak of waiting for lower prices, or of running from hand to mouth until after the November election. It is even said that building Hardware is running slightly behind the sales for August of 1903.

Nails, which sold in phenominal quantities last spring, are light south. Sheet metal roofing, a heavy item until late in the summer, is now running very light, while the odds and ends of building Hardware are just about maintaining the average.

To the sugar section mill supplies are beginning to go in considerable quantities, or rather good orders are coming in. However, the planters seem to have learned so well the lesson of economy that they are not cognisant of the good fortune that has come to them. The jobbers of the sugar section are buying with the same carefulness which characterizes the business of the cotton section. The drummers report that the same phrases about "waiting to see what will happen," "waiting until election time," are frequent on the lips of the country buyers. The planters themselves are a trifle more liberal in their orders.

This same condition of affairs applies to the rice belt along the coast.

Altogether the situation is a grievous disappointment.

However, there are two lines which are running fairly well. Ship chandlery is above the average, and vehicles and farming implements promise about 10 per cent better than they did at the same period last season. The reason for the first is that there has been a distinct addition to the fleet of New Orleans in several new lines of steamers. During the last month a number of these lines made their initial runs, and some liberal orders were placed with local firms.

Farming implements are like the poor, the planters and farmers must always have a certain supply. The increase in this business is due almost entirely, however, to the brisk trade promised from the cane belt, and the rather liberal orders which have been honored from the rice planters during the past fortnight. Vehicles have sold very well to all sections.

The local retailers are profiting by the stir in building trades. The strikes have been largely settled, and the contractors are beginning operations on a number of large held-over contracts which would otherwise have created edmand during the summer. This is creating demand for tools, for household Hardware and for Builders' Hardware of all sorts.

In addition to this, there has been a considerable influx of foreign population from the Northern States, and there is a heavy demand for residences and houses, which has entailed a considerable demand for household furnishings.

TABLE KNIVES IN ENGLAND.

Seeing how extensively American ideas are copied in this country, surprise has been expressed that the American style of table-knife has never "caught on" here, writes a contributor to the Ironmonger. In most of the hotels, and to a considerable extent in the homes of the middle and upper classes in the United States, the table-knives used have electro-plated blades, whereas in this country such blades are scarcely ever seen. Not only the most wealthy classes, but even the British Royal family, are content with ordinary unplated steel blades. Americans say that they prefer plated blades because they look nicer and are easier to clean than are plain ones. When asked why they do not offer similar cutlery in the home market, Sheffield cutlery manufacturers reply that British people would never buy it or use it. So far as we are aware, however, this point has never been put to the test, for the British public have had no opportunity of trying plated knives. It is notable that British and European people who settle in the United States soon fall into the way of using plated knives, and an obvious explanation of this circumstance is that they see such knives in use and on sale. If they were pushed for sale vigorously who can say that they would not gain a certain amount of popularity here?

SHELLAC IN INDIA.

Cause of Great Advance in Price.

In response to letters recently received from consumers of shellac asking the cause or causes of the advance in prices, I submit the following facts: Lac is produced in almost every province in India, but principally in the Central Provinces, Bengal and Assam, from which the largest amounts exported are obtained. That produced in other districts is chiefly consumed in local manufactures of bracelets, rings, beads, and other trinkets worn as ornaments by the women of the poorer classes, and in the manufacture of wood lacquer work, which seems to have been begun in very remote times. Some very artistic work is now done in this line. Lac is the incrustation deposited by the lac insects on the branches of certain trees, and is collected, as a rule, by the jungle tribes, who break off the branches on which it is deposited. In this state it is called stick lac, and is sold by the gatherers to local dealers, who sell it to the manufacturers of shellac or button lac, who put it through various processes until it becomes the lac of commerce. The United States and the United Kingdom furnish the principal markets for lac, taking by far the larger part of all that is produced. Smaller quantities are exported to continental Europe. Nearly all is shipped from Calcutta. During the last fifteen years there have been remarkable fluctuations in the amount exported. Since 1895 there had been a gradual reduction in prices, but during the past two years the product has been comparatively small, while the demand has largely increased. This increased demand is mainly due to the use of shellac in electrical works and in a minor degree for making gramophone records. This increased demand, the small production of the past two years, and the scarcity of stock have attracted speculators, which no doubt has tended to further advance prices. Another reason for the recent advance in prices is the fact that the lac dye, which formerly represented the manufacturer's profits, has been replaced by aniline dyes, and the price of the lac has been increased to make up for the losses due to this falling off in the demand for dye. The present high prices may stimulate production and reduce the prices, or the increasing demand may cause a further advance in prices.

MICHIGAN HARDWARE DEALERS ASSOCIATION

The tenth annual convention of the Michigan Hardware Dealers' Association was held at the Pantlind Hotel, Grand Rapids, Wednesday and Thursday, August 10 and 11, and was the most successful meeting they have ever had.

Wednesday Morning Session.

The first meeting was called to order at 11 o'clock. After telling the members how important it was they should be punctual at all meetings, the president appointed the following committees:

Credentials—A. Harshaw, Delray; Henry Stadt, Grand Rapids, and M A. Benson Saranac.

Constitution and By-Laws—E. J. Morgan, Cadillac; V. C. Wattles, Battle Creek; Arthur Shoeneberg, Saginaw.

Question Box—Frank Mulholland, Potterville; J. G. Patterson, Detroit; Karl S. Judson, Grand Rapids.

Nominations—H. C. Minnie, Eaton Rapids; F. Brockett, Battle Creek; Henry C. Weber, Detroit; Geo. W. Hubbard, Flint; S. Winchester, Jackson.

Resolutions—O. H. Gale, Albion; C. M. Alden, Grand Rapids; Geo. Towner, Muskegon.

Sergeant-at-Arms—C. E. De Clement, Detroit.

The secretary then read the minutes of the last regular meeting and also the minutes of a meeting of the executive committee held in Detroit on April 20, which were accepted as read. The

J. B. SPERRY, PRESIDENT.

secretary also read communications from a number of the officers and others representing other associations. All of the above communications extended best wishes to the members of the Michigan association, and expressed the hope that the convention would be a success in every way. On motion, these letters were accepted and the secretary was instructed to thank the senders for their expressions of good will.

The meeting then adjourned until 2 p. m.

Wednesday Afternoon Session.

After calling the meeting to order at 2 p. m., President Popp introduced the Hon. Edwin F. Sweet, Mayor of Grand Rapids, who, in his cordial manner, delivered an address of welcome which convinced the delegates that their stay in the Furniture City would be a pleasant one, and that they might expect to be the recipients of every hospitality while in Grand Rapids. The president responded briefly to the address of welcome, and thanked the Mayor for his cordiality.

The credential committee made its report, recommending that all Hardware dealers who had signed the roster be given a seat in the convention, and this report was adopted.

The president then delivered his annuall address, as follows:

PRESIDENT'S ADDRESS.

BY JOHN POPP, SAGINAW, MICH.

I greet you to-day at this our tenth annual convention, and it is a pleasure for me to say, upon looking over the representative Hardware dealers throughout the State, that our membership has increased, perhaps not to the extent that we could wish and had reasons to expect, but, compared with other States, our ratio of increase has been such that we see no reason for discouragement.

It is not always well to review the past, but in this case I must, for the reason, I am pleased to say, that I am one of the charter members of the Michigan Hardware Association since its organization, and on looking over this gathering to-day I am pleased to see before me a majority of the organizers, still active and enthusiastic members. There is due these gentlemen a credit which shall never be forgotten, for, through the combined work of associations, the Hardware business to-day is on a higher basis than heretofore, and I do personally believe that if there had not been association protection the catalogue houses would be doing one-half of all the Hardware business that is being done in Michigan to-day.

You know in union there is strength, so let us, each and every member, take hold and lift and not stop until we have secured every retail Hardwareman in Michigan as a member of the association. We have in round numbers 1700 Hardware dealers in Michigan Think for a moment, gentlemen, of the undeveloped power within our ranks that only awaits the magic touch that will bring us to a full realization of our strength.

THIS IS AN AGE OF ORGANIZATION.

If any dealer is not satisfied with existing Hardware conditions, let me tell him there is a remedy and that remedy's name is organization. This is an age of organization; the jobbers, the manufacturers, the catalogue houses, and in many localities even our customers, are organized. Can we successfully combat single-handed this array of organization? A great deal has been accomplished along association lines, and yet I am sure it is only in its earliest infancy and that the next two or three years will witness a great increase in membership and general interest in association work.

BENEFITS SECURED.

Here are your lien laws, your garnishee laws, and one of the greatest dangers that threatened the retail interest in this country was the parcels post movement, fathered by the catalogue and mail order houses. You will all agree that if it had not been for the good work of the Hardware associations throughout the United States the catalogue houses would be distributing a parcel weighing 50 pounds to a farmer's house for 15 cents. In other words, our mail cars would be turned into freight service cars; but as it stands to-day, I think this will not occur in the next generation. When it came up before Congress the catalogue houses found out that there were other business men in the field besides themselves when they ran up against the different Hardware associations throughout the United States.

And while we are talking about benefits, here is the simplest of all, and that is our insurance protection. That alone will save you many times the cost of belonging to this association, besides all the other benefits I have already mentioned.

JOBBERS SELLING TO CONSUMERS.

One of the greatest evils that has been overcome to a great extent is that of manufacturers and jobbers selling direct to the consumers. The jobbers to-day are looking after the merchants and the merchants after the retail trade. This makes it pleasanter for both jobber and retailer.

Now, brother Hardwaremen, begin to wake up and do not talk so much about catalogue houses. If you will talk one-half as much about the Michigan Retail Hardware Dealers' Association as you do about these catalogue houses you will be making money, instead of advertising some one else. The more my competitor talks about me the more I am advertised.

The treasurer, Henry C. Weber, then presented his annual report as showing a balance of $179.48.

The secretary was then called upon and gave as summary of the work during the past year:

Digitized by Google

SECRETARY'S REPORT.

BY A. J. SCOTT, MARINE CITY, MICH.

When I was called upon as secretary a year ago to give a report of the work accomplished during the preceding year I did so feeling that our efforts toward the accomplishment of those purposes for which this association was formed had been unusually successful during that period. In preparing my report this year I could not help but feel even more enthusiastic over the outlook. While I know that there is an endless amount of work still to be accomplished, I realize that we are approaching the solution of several problems which have been a thorn in the side of the retail Hardware trade in past years, and which would always remain as such if the Hardware dealers were forced to battle with them individually, instead of collectively through the association.

IF EVERY HARDWAREMAN OF THE STATE

could realize as thoroughly as do our officers and a large number of our members the place which the association occupies as a power for good, we would soon become so strong as an association that any grievances which we might have would be readily adjusted.

COMPLAINTS.

Now in regard to complaints. I take it that our friends in the manufacturing and jobbing business during the past year have been very good, for only six times since the last convention have complaints been filed with the secretary. Four of these complaints were settled in a manner entirely satisfactory to both parties. One against a stove company for allowing their goods to be quoted at a low rate by a catalogue house has not been definitely settled, but I believe that, in the light of recent events, we will be able to show the manufacturer the necessity for withdrawing his goods or having them listed at higher prices. The sixth complaint, which was against certain jobbers for selling to contractors, was carefully gone into by a committee appointed by the president of the association, and while at the time I thought that the complaint was merely temporarily settled, we have not since heard from the complaining party, and I hope that the concessions made by both parties left no further cause for complaint.

SELLING GLASS TO CONTRACTORS.

In December, upon the request of one of our members, the glass jobbers of this State were interviewed and requested to refrain from selling glass to any but legitimate dealers. An agreement to this effect was signed by all the glass jobbers and a provision inserted in the same that, provided it became necessary for any glass jobber to sell direct to a contractor, he would give a commission on the sale to the retail Hardware dealer doing business in that territory or to his nearest customer. I have since heard of several sales of glass that have been made to contractors, but in every case that has been brought to my attention some Hardware dealer has been given a commission, as agreed upon.

NATIONAL ASSOCIATION.

March 22, 23, 24, your secretary, with Vice-President F. M. Brockett and T. Frank Ireland, a member of your Executive Committee, attended the fifth annual convention of the National Retail Hardware Dealers' Association in Indianapolis and found the affairs of our parent body in excellent shape. Various ways and means for increasing the interest in the various States affiliated with the National Association were discussed, and we derived a great deal of benefit from the experience of the other States represented.

PARCELS POST BILL.

The Parcels Post Bill was given a great deal of attention and as a result the fight was renewed in each State and no action was taken on the bill at the last session of Congress. The bill is not killed, however, and we will need to continue our efforts at the next session, as the Postal Progress League (in other words, the representatives of the mail order houses) will undoubtedly be on hand in their efforts to force this obnoxious piece of legislation down the throats of the people of the country.

HARDWARE MUTUAL INSURANCE.

The officers of the National Mutual Hardware Fire Insurance Company made a very favorable report at the above meeting in regard to the business of the company, and stated that applications for policies were being received from every State in which there is a retail Hardware dealers' association.

CATALOGUE HOUSE COMPETITORS.

While the delegates will probably hear a more complete report of a meeting held at St. Louis, at which representatives from both the retail and wholesale Hardware associations were present, I cannot refrain from mentioning this meeting at the present time. It was undoubtedly one of the most important gatherings of Hardwaremen which has ever been held, and was only made possible by the rapid increase in the strength of the organizations of dealers in this and other States.

Our past president, T. Frank Ireland, of Belding, as a member of the Executive Committee of the National Association, was in attendance at that meeting, and I believe will be with us to give the details of what was accomplished. A permanent committee was formed, comprised of members of both branches of the Hardware business, who will, in conjunction with the National and State retail and wholesale Hardware dealers' associations, carry out plans for offsetting the competition of catalogue houses, which has become such a vital question with so many retail Hardware dealers.

With the strength of the retailers and wholesalers combined it should not be long before the manufacturers realize that their interests do not lie with the catalogue house, and I understand that already several manufacturers of standard lines have taken steps which will result in their goods being entirely withdrawn from the next issues of these catalogues. This committee has a great deal of work cut out for it and it is going to require considerable assistance. It has the names of all the members of each State association and occasionally different members will receive communications asking them to comply with certain requests. It is unnecessary for me to give the details of these requests, but I would like to urge every one here to carry out the wishes of this committee when appealed to, for if we are careless about the matter it is unreasonable for us to expect any results. We have gotten to a point where we see a solution of the catalogue house problem in sight, and it devolves upon us to follow up this advantage in every way possible.

The report of the secretary was received by the delegates with every mark of approval.

J. H. Whitney, of Merrill, then delivered a thoughtful address on the subject of

THE RETAIL DEALER AS AN EDUCATOR.

The address of Mr. Whitney was followed by a spirited address by C. L. Glasgow, of Nashville, on

OUR SOCIAL RELATIONS.

While I have not been actively associated with you in the past, I have not failed to notice the multiplication of opposing forces which attempt to divide again and again the volume of our trade, and with you have studied long and hard how their influence might be overcome. I am now president of a kindred organization, composed of the carriage and implement dealers of this State, an association whose membership list contains many of the names of the members of this association, and whose task is the solution of the same great problems with which you have wrestled, and I have often thought a union of the two forces might prove of mutual benefit.

FRATERNITY.

I believe that one of the influences that brings us together, aside from the general desire to carry forward the great work in which we are engaged and so deeply interested, is the pleasure of meeting each other, of becoming better acquainted, enjoying the vigorous handshake, of getting away for a day or two from those surroundings which, though familiar and pleasant, yet are suggestive of hustle and worry, and laying aside for a time the consideration of those cares that weary us, enter into those relations which humanity naturally seeks in its escape from the more weighty things of life, not that we should let the pleasure of our social gatherings become of paramount importance, or that pride in the institution or the successful workings of the organization should become a more important factor in the lives of our members than the achievement of its purpose, but from these meetings we may get an inspiration that will send us home with a determination to exercise a more kindly feeling toward each other and make our fellow tradesmen and business competitors our personal friends.

While we gladly admit the refining and elevating influence of women in social life and the tendency their presence has to keep us watchful in our every speech and action, man's intercourse and association with men broaden him, increase his determination to do things, and build him up and strengthen him in those qualities that enable him better to overcome resistance and win success. Especially is this helpful when kindred spirits meet that find pleasure in devising new ways and means and discussing the trials and tribulations incident to the conduct of the same business enterprise.

Digitized by Google

We rejoice that the Hardware business occupies such a prominent position in the list of commercial pursuits that it is recognized as the great balance wheel in human industry, the sure barometer indicating depression or prosperity in business life; that in its conduct there are fewer failures than in most any other requiring as large an investment; that its successful operation demands and receives the attention of the very best executive ability in the commercial world, and it should be our ambition to continue this record, making the business still more honorable and successful by adding thereto the impress of our personality.

A MISTAKEN VIEW.

This cannot be easily done under twentieth century conditions if each dealer remains a lamp unto himself, deluded by the thought that his skillful management and superior ability challenges criticism and produces the very best results possible under all circumstances, and, therefore, any conference or exchange of ideas to which he might contribute would result in his loss and the others' gain, or, possibly not being in touch with the true spirit of the times, he feels that his competitor, be he of his own or nearby town, drinks at the fountain of his wisdom only to use the added knowledge against him, or awaits an opportunity to do him an injustice or injury, thus going on from day to day, and year to year, nursing those false conclusions that keep forever locked the truer and nobler emotions of his life, the full play of which brightens the eye, enlivens the step, throws a dash of color into the picture of life, clarifies and enlarges our vision, giving us truer conceptions of our duties and responsibilities, and enabling us to take a more accurate measurement of our fellow man and see in him many good traits worthy of commendation and that make him a good, companionable fellow.

SELF-SACRIFICE.

The larger number of us reside and do business in small cities or villages where the conventionalities of social life bring us often in contact, and we cannot afford for social or financial reasons to permit any but the best of feelings to obtain. To continue these conditions and maintain the high standard of our business often requires sacrifice on the part of the individual. We cannot, if we would, relieve ourselves of the responsibility of our personal influence, it cannot successfully be shifted, and each must bear his share, and therefore we should not participate in any action that would tend to lower public or private estimate. To what extent personality enters into success is often overlooked or underestimated. We may feel at times that trade is gained and held solely by the magnetism of price, and this feeling may be intensified when we see our business or social friends patronizing our less genial or close-fisted competitor, but we may not always understand all the conditions.

We must not make our good fellowship our chief asset in trade. It will not take the place of quality, price or good display, but, other things being equal, humanity will seek those relations most congenial, and your efforts toward friendliness and an active interest in the social conditions surrounding you will net you a good return in pocket, mind and heart, and make for you lasting friendships which may prove of inestimable value at some supreme moment in later life, and it is these memories and experiences that temper many of the adverse winds with which we have to contend, that renew our faith in God and humanity, keep the fires of hope alive, bringing to our rescue that warmth of heart and strength of mind that stimulate action and go far toward insuring success.

Let us always remember that it should be easier for us to lift up than pull down, that in our creation was embodied a power for good, and a misuse of it does not produce satisfactory results.

LET US BE CATHOLIC IN OUR VIEWS,

charitable in our criticisms and generous in our sacrifices, feeling thankful if thereby we have strengthened confidence or allayed suspicion in a brother dealer's mind to the extent that with faith in us he may not be misled by the statements of a customer whose personal gain through misrepresentation has dulled his conception of honesty and integrity.

I believe a great loss is sustained yearly by the sale of goods at a cut price, resulting from a lack of confidence in or a wrong impression of the intents and purposes of our competitor, and this can largely be avoided by closer social relations, begetting better business relations, eventually ending in a more thorough understanding and mutual agreements whereby our respective interests are protected.

Admitting the influence of good social relations upon our business and that as progressive business men we are desirous of bringing to its management every influence representing an element of strength, let us go a little further and recognize the fact that the world at large has a right to a portion of our time, enough at least in which to discharge those duties that belong to good citizenship, and we may well here put the general question, "What are we in this world for?" Certainly something besides making a success of a particular business that absorbs the ripest fruit of mind and body, and in return gives nothing but food and clothing. Are we here simply to wear these clothes and eat and sleep; be counted by the enumerator, work and pay taxes, buy and sell, and through the wise investment of the profits be denominated successful? If in these days of mental research and scientific investigation, of abounding prosperity and colossal fortune, all the munificent endowments with which we have been blessed are to be turned to personal account, then, indeed, have we fallen far short of living up to the full measure of our possibilities

WE ARE HERE TO HELP AND BE HELPED.

Some are burdened and we must lift; some are sorrowful and we must sympathize, some are in want and we must minister; and through this all we can see the angel of Hope standing far up the mountain side of promise applauding and beckoning us forward, while Duty walks beside us to encourage and direct.

I cannot believe that cultivating good social relations, inspiring men to be more honorable and trustworthy, increasing their confidence in each other, will tend to weaken our mentality, or render us less able to grapple with and solve the great business problems that confront us; but this enriched experience, this broader and deeper education, this higher ideal of business life, will bring still greater honor to our business and prove us useful and worthy citizens of our respective communities, holding ourselves in readiness to accept any responsibility that business or society may impose, determined at all times to get from life the very richest blessings it has in store.

A. F. Sheldon, of Chicago, gave an address on

SALESMANSHIP AS A SCIENCE,

which was received with due attention.

The secretary then read the following letter of invitation:

"Members of the Michigan Retail Hardware Dealers' Association.

"Gentlemen:—The following jobbers and manufacturers extend to you all a cordial invitation to a banquet at the Lakeside Club Thursday evening at 7 o'clock. Arrangements have been made to take cars after your adjournment to-morrow, and after giving you a bird's-eye view of our city, will leave you at the club in plenty of time to get ready for the evening's festivities.

"(Signed) Clark-Rutka-Weaver Company, H. Leonard & Sons, Wm. Brummeler & Sons, Hopson-Haftenkamp Company, H. M. Reynolds & Co., Miles Hardware Company, Grand Rapids Supply Company, Grand Rapids Hardware Company, Grand Rapids Paper Company, Studley & Barclay, Michigan Stove & Caster Company, Bissell Carpet Sweeper Company, Michigan Barrel Company, Hardware Supply Company, Wm. Reid Company, Brown & Sehler, Harvey & Seymour Company, W. B. Jarvis Company, Foster, Stevens & Co."

On motion, this invitation was accepted and placed on file.

The meeting then adjourned.

Thursday Morning Session.

President Popp called the meeting to order about 10 o'clock and announced as the first thing on the programme a paper by A. K. Edwards, of Kalamazoo, on the subject

CAPITAL AND CREDIT—ITS USE AND ABUSE IN OUR DAILY BUSINESS,

from which we make the following selections:

* * * * *

TROUBLE CAUSED BY OVER ANXIETY.

Many of the troubles which we have are of our own making through our over anxiety to increase sales too often at the expense of those of our competitors, by taking chances of making collections beyond those which common prudence would dictate, and in attempting to cover too much ground by competing in price with the catalogue house, and in time with the installment dealer. We are, in doing this, practically burning our candles at both ends. We must either choose one or the other method, or adopt a system that will allow us to do business upon both. In our business we have been quite successful in meeting cash prices and installment prices with installment prices. At first

Digitized by Google

we feared it might be the cause of much annoyance and many difficulties, and it probably has been, but the annoyance and the difficulties have been so greatly overbalanced by the advantages gained that we have increased the line of goods upon which we are naming special prices for cash, and I firmly believe that this increase will continue until much of the line is so covered by us. We have already applied it to stoves, ranges and refrigerators.

TWO VITAL ITEMS.

Capital and credit are the two vital items in our business life. Our capital and our credit, as well as our customers' capital and our customers' credit, are linked and interlinked in such manner as to make it difficult to separate them. Our capital is money of our own which we have invested in business. If we borrow money to increase our capital it is then not capital but credit which we have added. We may increase in this manner our credit to a small extent by deceiving our creditors with the idea that our capital is the sum of both our capital and our credit, but the advantage gained is only temporary, as the modern methods of commercial reporting are almost sure to locate, approximately at least, the amount of our capital and fix our credit unbeknown to us, and after we imagine that our inflated report has been taken as an actual fact. The larger and more prosperous a business is the nearer to the actual facts are the commercial agencies able to secure correct information from the managers of such business interests. Therefore, when replying to inquiries, either from our creditors or from the commercial agencies representing them, it behooves us to be frank and honest, as such a statement will certainly increase to the fullest extent possible with good business judgment our credit, even if it does not inflate our capital, while an attempt to deceive will tend to arouse a suspicion that we are worse off than we are in reality, and the report will likewise be so colored.

KNOWLEDGE OF CUSTOMERS' CREDITS.

Nearly as important a matter to us as our own credit is the knowledge of our customers' credit. The man who relies upon the fact that he is a well-to-do farmer, a well-paid mechanic or a prosperous professional man to obtain unlimited credit, and by unlimited credit I mean credit without a positive time stated for payment, and not unlimited as to the amount, and who feels insulted or at least injured when pressed for payment, is a good customer for our competitor to have. Regarding this over-sensitiveness upon the part of the debtor community, there appears to be a growing sentiment that it is no longer a personal insult to be asked to settle an account that is due or past due, nor to have a pay day named when the account is made. This to us is an encouraging sign. When our customers realize that their personal friends are entitled to the same treatment as the stranger who is supplying them with artistically worded and too often untruthful advertisements regarding the goods he has for sale, then and not until then will a disagreeable feature of business be eliminated.

* * * * *

A CARELESS AND EXPENSIVE SYSTEM.

While I have laid much stress upon our careless and expensive credit system, I realize that there are other dangers to be avoided by us, in order that our capital may not be impaired and our credit weakened. One of the hardest to avoid is over-buying, which causes thousands of merchants to tax their credit to the utmost, to worry themselves into premature old age, if not the grave, even when not the cause of disastrous failures. It is a self-gratifying pleasure to realize that this jobber or that manufacturer holds us in such high esteem that he or they would fill any order we might send them without a question until such time as we neglected to meet our payments with reasonable promptness. Then an investigation would be put on foot to find out the whys and wherefores and what was our actual worth and responsibility. Possibly we would hear nothing of it, but it would be made just the same. Oftentimes payments are made promptly, but it is through the financial assistance of our banker or our friend, at the expense of our profits, or of a large proportion of them, by added interest charges.

The paper, which was a long and thoughtful one, was one of unusual excellence.

E. J. Morgan, of Cadillac, announced that on account of the sickness of his partner, J. H. Murray, the latter had been unable to be present, but he had prepared his paper on the subject

COLLECTIONS,

and Mr. Morgan read it. It proved extremely interesting.

W. P. Bogardus, of Mount Vernon, Ohio, was called upon and delivered a masterly address on

THE CATALOGUE HOUSE QUESTION.

Last summer, when I had the pleasure of meeting you, the great subject of interest was the post parcels question. To-day the darkest cloud on the horizon of the retailer, and I may say the jobber as well, is the catalogue house question. During the last fifteen years there has come up a class of men who have acted on the idea that the way for them to do business was to advertise through catalogues, scattered broadcast over the country, the goods they had for sale. And to attract the buyer's attention they used some of the best-known brands of goods as baits, and offered them at a price so near cost that the retail trade would not meet the price. In this way they sought to create doubt in the minds of the buying public, and arouse suspicion that their home merchants were charging too much profit. These people freely admit that on equal terms they could not hope for trade as against the local merchant, but that they must rely on being able to undersell the retailer, or at least create the impression that they are doing so. During the early years of their existence they bought of the jobbers, but lately they are going to the manufacturers for their supplies and their avowed intention is ultimately to own their own factories, or control the output of such factories as sell them goods, as in some cases they have already done. The evil effect of this way of doing business is forcing the subject on the attention of both jobber and retailer, and a solution of the question is being sought for.

W. P. BOGARDUS.

A RANDOM WAY OF SELLING GOODS.

The fact that goods are quoted in the catalogues in a good many instances as low to the consumer as they are to the retail trade, and in some cases lower, would indicate that some retailers, and that is what catalogue houses are, are being favored to the injury of the balance. That manufacturers or jobbers should engage in this random way of selling goods has always been a surprise to me. Especially when the low prices are given to people whose purchases will not exceed 20 per cent. of the manufacturers' output, and who come in direct competition with the manufacturer's customers who buy the 80 per cent. or balance of the manufacturers' product. If the manufacturer were selling to a trade that was opening up new territory, if he was sending his goods to consumers who had heretofore never used them, there would be some justification for his course, but he is supplying goods for additional competition in territory that is already covered, and is encouraging a competition that is bound to react on the manufacturer disastrously.

AN UNFAIR COURSE.

The things we did yesterday have an influence on the acts we commit to-day and the work of to-morrow will be more or less influenced by what we do to-day. The manufacturer who sells to catalogue house and jobber at the same price is doing an unfair thing and discriminating against the jobber. He may say, as some

Digitized by Google

do, that a catalogue house buys more than any one jobber and further justify himself by saying that the catalogue house is better pay than 75 per cent of the jobbers are, but he should remember that the jobber sells to the retail trade who handle much the largest per cent of his output; that the jobbers are over two hundred in number while the catalogue houses are less than a score.

MANUFACTURER IS AFFECTED.

There is an injustice to the largest per cent of a manufacturer's trade, when he takes the position that he will continue to supply the catalogue houses at the same prices that he asks the jobber to pay. Or when he says that the quantity shall regulate the price regardless of other conditions, and will give the catalogue house, that is but a large retail store, the same price that he gives the jobber who must rely on the retail trade to help him dispose of the goods that he has bought of the manufacturer. It is absurd on the part of the manufacturer, who says that he will sell to all who come at such prices as he pleases, when the finds the jobber and retailer declining to further buy his goods to cry "boycott" and seek to get sympathy from the public. The manufacturer who treats the subject of catalogue house competition as a matter of small moment and who is inclined to be amused at what the jobbers and retailers say, and contemptuously puts aside any consideration of their wishes, may wake up some day to the fact that there is more in the proposition than he had any idea of and that it vitally affect him, as well as the jobber and retailer.

RESPONSIBILITY CANNOT BE SHUNNED.

There is a responsibility in this matter that he cannot escape. Especially when he remembers that at least 80 per cent of his goods must be sold through the legitimate channels of trade—the jobber and retailer. It becomes a rather serious question to the manufacturer how to dispose of the 80 per cent of his goods, if he disposes of the 20 per cent at prices that make it unprofitable for the jobber to buy of him. There is an equity in business that cannot be disregarded. There is a fair dealing that all men demand. And the man who ignores these conditions, and refuses to be bound by them, loses public confidence and ultimately digs his own business grave.

COMPETITION IS THE LIFE OF TRADE.

Competition is good and is the life of trade, but a competition that is based on favoritism—the giving of special prices to one competition to the detriment of the others—means ruin and disaster and is unfair in every way.

INTERESTS OF JOBBER AND RETAILER IDENTICAL.

During the decade of association work there has been some advance. At first association work was looked upon as antagonistic to the jobbers, but a closer inspection showed that their interests were identical Last year in May we—a committee from the National Retail Association—met by invitation a similar committee from the Jobbers' Association to discuss some phases of business competition. Last fall at our suggestion representatives were permitted to present their views from the retailers' standpoint to the manufacturers and jobbers at their convention at Atlantic City. This year in May representatives of the National Association were invited to address the jobbers and manufacturers at Atlanta. Later on they were invited to meet the jobbers in committee at St. Louis, and a permanent committee with members from the jobbers associations and the National Retail Association, was formed to consider the question of catalogue house competition. What will be the results of their study remains to be seen.

INDIVIDUALS ARE HELPLESS.

Now comes the practical question for you and me to consider. How can we help on the work? I know of no better way than to join our State Association, so that we can stand united against the evils with which we are confronted and have to deal. As individuals were are helpless. United we have a strength that we little comprehend, which, if used wisely, will be for our mutual good. To-day little Japan is fighting against great odds that she might have room in which to grow, and a "fair competition." An armed commission of Englishmen is marching into heretofore inaccessible Thibet to make a commercial treaty that will open up the trade of that hermit nation to the world. Shall not we, as retail Hardwaremen, stand united and present a solid front, so that some method may be devised to mitigate some of the evils under which we labor? Gentlemen, it is up to us to take some action that cannot be taken, unless we stand shoulder to shoulder. A fair competition, and no favors and a reasonable chance to live by our business, is what we want, and is what we will fight for.

E. S. Roe, of Buchanan, was then called upon and read a paper upon the subject:

SOME POINTS WHICH CONTRIBUTE TO THE SUCCESSFUL RETAILING OF HARDWARE.

After reading which the meeting adjourned.

Thursday Afternoon Session.

The president called the meeting to order at 2 p. m. and announced that the session would be an executive one for retail Hardware dealers only.

The committee on constitution and by-laws was called upon and reported as follows:

Mr. President and Gentlemen: Your commitee begs to report as follows:

We recommend that the constitution and by-laws stand as adopted by your last convention with the following amendment:

A committee of two, composed of the president and secretary, shall be delegates to the National Hardware Dealers' Association convention, and provided they cannot go, the president shall have power to appoint this commitee from the executive board. Their actual expenses shall be paid by the association.

All of which is respectfully submitted.

Signed: E. J. Morgan,
V. C. Wattles,
Arthur Shoeneberg.

A delegate reported a case where a jobber persists in selling goods to contractors and architects and an animated discussion followed, in which several of the delegates offered various suggestions as to the best method of getting the offending jobber to discontinue the practice.

On motion it was decided that all the members should take the matter up with this jobber and convince him that it would be to his interest to conform to the wishes of the retail Hardware dealer.

The nominating committee was then called upon and submitted the following names to the convention, who were elected by acclamation:

President, J. B. Sperry, Fort Huron.

Vice President, George B. M. Towner, Muskegon.

Treasurer, Henry C. Weber, Detroit.

Secretary, Arthur J. Scott, Marine City.

Executive committee for two years, S. W. Winchester, Jackson; J. G. Patterson, Detroit; E. B. Standart, Holland; E. S. Roe, Buchanan; and John Popp, Saginaw.

H. G. Mulholland, chairman of the question box committee, was called upon and submitted several questions that had been placed in the box by delegates, over which some considerable discussion arose.

The president then appointed Henry C. Weber and A. Harshaw to escort the new officers to the chair. The retiring president, Mr. Popp, spoke feelingly of the pleasure which he had derived during the past year from meeting and working with the other officers of the association. He said that the new president could depend upon him at all times to assist him in every possible way.

The new president, J. B. Sperry, in taking the chair, acknowledged that the action of the association in electing him to the highest executive office was a complete surprise to him, and stated that he would to the best of his ability fulfill the duties of his office.

Mr. George B. M. Towner, of Muskegon, as vice president, said that he would support the president in anything which might be undertaken in the interests of the association.

Henry C. Weber, of Detroit, who succeeded himself as treasurer, stated that he hoped that this office would have been tendered to some one else at this meeting, but signified his willingness to again fulfill the duties which evolve upon him as treasurer.

A storm of applause greeted Secretary A. J. Scott when he arose to thank the members for the confidence which they had bestowed upon him by electing him for the third time to the office of secretary. He was glad to feel that the membership had been materially increased during the past year and hoped that by the time of the next convention he would be able to report a still greater increase in membership.

There was rivalry between Lansing, Detroit and Saginaw for the place of next meeting of the association. Written communications from jobbing and manufacturing bodies in Detroit and Saginaw were presented, and were seconded by members present from those cities, while C. A. Gower of E. Bement's Sons, Lansing, made an eloquent plea in favor of his city. Saginaw was finally chosen.

The meeting then adjourned.

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.

Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

CREDIT REFORM IN THE VARNISH TRADE.

A movement has been started in the varnish trade that contemplates the shortening of the time of credit on goods sold to sixty days from date of invoice. This is a reform in methods of credits that has long been needed and that should receive the cordial support of every varnish manufacturer. For years the varnish trade has labored under a great disadvantage in this matter. There has been no uniform practice as to the extension of credits; each house has been, to all intents and purposes, a law unto itself, and the result of this go-as-you-please policy has been a most unreasonable extension of credits, in some cases running up to six months or more. Probably no other trade has suffered so much from this entirely unwarranted practice as has the varnish trade. It is an evil that has grown almost unconsciously, each manufacturer striving to outdo the others in the matter of liberal terms of payment, until it has become simply intolerable. Hence the movement in the National Varnish Makers' Association to set a reasonable uniform time limit to credits.

This movement was inaugurated at a recent specially called meeting held in Buffalo, at which the general interests of the trade were discussed. Among other reforms it was decided to test the opinion of the varnish manufacturers on the subject of credits, and for this purpose the definite proposal is now made that, beginning December 1, 1904, the method of credits, or rather, lack of method, heretofore in vogue shall be done away with, and that instead of allowing purchasers six months or more within which to settle for goods, they shall hereafter be limited to sixty days, with a discount of 2 per cent. for cash in ten days. This is the proposition which the manufacturers' association, in special session at Buffalo, decided to lay before the manufacturers of this country, and to bring up for final action before the annual meeting of the association in November next. If it meets with the approval of the manufacturers generally, it will become settled policy in place of the present long-term practice.

Aside from the fact that it is entirely unbusinesslike to extend credits unreasonably, the varnish trade is least of all able to stand such an unreasonable burden. Conditions in this trade have been going from bad to worse for some time. Prices of the raw material used in varnish making have been advancing by leaps and bounds until in many instances their present cost is twice that of former years. Turpentine and naphtha and gums have steadily advanced; but meantime prices of the finished produce have remained stationary. The varnish manufacturers have been ground between the upper and nether millstones of increased cost on the one hand and lengthening terms of credit and dull business on the other hand. For some time past we have foreseen that something must be done to remedy this unfortunate state of affairs in the varnish trade. The least that can be expected is the adoption of a reasonable term of credit on goods sold, as proposed by the Buffalo meeting.—*Paint, Oil and Drug Review.*

INCREASING USEFULNESS OF ASBESTOS.

In the important work of protecting life and property from fire, says an exchange, there is a growing appreciation of the value of asbestos and a constant increase in its use. It has a combination of properties unlike that of any other substance found in nature. No other product as yet discovered could take its place. It has been called mineral wool, and also the connecting link between the mineral and the vegetable kingdoms. After the fibers of asbestos have been separated from their mother rock they have a fluffy softness and whiteness much like that of wool or cotton, and by a process very similar to that of ordinary weaving they are converted into cloth. It is a cloth, however, which, owing to its mineral origin, is impervious to fire, and herein lies its value. It is more and more extensively used in this country for fireproof curtains, for firemen's helmets, jackets and leggings, and for gloves and shields for men working at the mouths of furnaces. The texture of the fabric resembles that of canvas, so it is too coarse, as now manufactured, for such delicate materials as those of lace curtains and women's dresses, for which its use has been suggested, but an interesting way in which it is now utilized is in the work of surgeons in making splints and dressing wounds. Cotton and wool must be specially treated to be rendered absolutely clean and antiseptic, while ashestos is naturally so.

REVIEW OF THE MARKETS.

WIRE NAILS.—Under date of August 16, the American Steel & Wire Co. announced a heavy reduction in the prices of Wire and Wire products, to take effect at once. It will be noticed that the differentials have also been changed, making a greater difference between the base prices of Wire Nails and Smooth Wire, and a smaller difference between those of Nails and Barb Wire than formerly. Quotations are as follows, f.o.b. Pittsburgh 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$1.60
Retailers, carload lots	1.65
Retailers, less than carload lots	1.75

New York.—The dealers have been carrying light stocks, as the unsettled condition of labor makes the demand anything but a heavy one. The quotations, which have been made to conform to the reduced prices at the mill, are as follows:

Single carloads	$1.79½
Small lots from store	$1.85 to $1.90

CUT NAILS.—The cheaper conditions surrounding the Wire Nail market are having an effect on the present prices of Cut Nails. The official quotations being shaded 5 cents in carload lots. Official quotations are as follows for Steel and Iron Nails, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Base.
Jobbers, carload lots	$1.75
Jobbers, less than carloads	1.80
Retailers, less than carloads	1.90

New York.—Owing to irregularities in prices at mills, changes in quotations for the local market are as follows:

Carloads on dock	$1.70 to $1.75
Less than carloads on dock	1.80
Small lots from store	1.85

BARB WIRE.—The reduced prices announced by the American Steel & Wire Company, on August 16, result in the following quotations, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.75	$2.05
Retailers, carload lots	1.80	2.10
Retailers, less than carload lots	1 90	2.20

SMOOTH FENCE WIRE.—Quotations, which result from the prices announced August 16 by the American Steel & Wire Company are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.45
Retailers, carloads	1.50
Less than carloads	1.60

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

CORDAGE.—The market is a slow one, as the limited sales made for September delivery would indicate. The market is firm, notwithstanding the light demand. The following quotations represent the market:

	Cents per lb.
Pure Manila, 7-16-inch and larger	11½
⅜ inch	12
¼ inch and 5-16	12½
No. 2 Manila	10¼@10¾
Pure Sisal, 7-16-inch and larger	9
No. 2 Sisal, 7-16-inch and larger	7½
⅜ inch	8
¼ inch and 5-16-inch	8½
Lath, Yarn, Medium and Coarse	7½
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL.—Under date of August 22, the following advanced quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....46 cents per gallon.
In lots of 5 barrels or more.....45 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil.....65 cents per gallon.

THE PHILADELPHIA TRADE.

Vacations, expositions and fairs are the complaint of the salesmen who find trade more or less interfered with by these outside diversions. Nevertheless, there is a fairly active demand, while the call for prompt shipment is probably greater, thereby showing that stocks are not large and that the trade is buying cautiously and frequently. Gradually, however, we are all getting back to business and a hopeful feeling is to be found as to the volume of fall trade. The market is in rather a curious condition, and while the present low prices of raw material are apt to predispose the buyer with expectations of lower figures, he is frequently surprised by having advances named him, and these advances are well maintained We doubt if there ever was a time when combinations showed equal strength in preventing unrestricted competition and endeavoring to maintain a more profitable margin of price. All this leads to greater stability in the market, and violent alternations of prices are greatly curtailed. Collections are somewhat dragging and dealers are probably waiting for the results from fall crops. The South is very hopeful of an ample supply of money, and the large corn crops in the West must put a large volume of money in circulation, while even our local farmers, to a larger degree than usual, have been benefitted by higher prices for their products.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

Vacations have interfered somewhat with business during the past few weeks, but the time is fast approaching when everybody will be back at their desks and ready for the fall trade. The outlook for business is encouraging. Salesmens orders are larger and more frequent than during the early summer and the feeling among retailers seems to be more hopeful. Localities which depend for their main support on factories or mines in the immediate neighborhood are, of course, influenced almost wholly by the condition of their industries. Good business is reported where the mills are running and very little where they are shut down, so that there is considerable difference in the sentiment expressed by merchants in different towns. Taken, altogether, however, the situation is better than for several months past. The Merchants & Manufacturers Association is continuing its efforts in behalf of Pittsburg as a mercantile center. August 20th to 24th inclusive, special rates have been granted on all railroads to merchants coming to the city to buy goods, and it is expected that the local jobbers will receive calls from a large number of their customers between those dates. The association has made arrangements to entertain visiting merchants in the evening of the 24th inst. at a theatre party which is to be followed by a reception at the Hotel Henry. Every effort will be made to make the time spent here by our customers both pleasant and profitable.

LOGAN-GREGG HARDWARE CO.

THE SAGINAW TRADE.

Business for the last few weeks has been dull, as it generally is at this time of the year. This locality has had plenty of rain, and the crops look fairly well. The corn crop, although late, is promising, if the season continues late and warm. Sugar beets look better than usual, although there was not as large a crop planted as last year. The sugar factories are getting in readiness to run as soon as the beets are harvested. The coal mines are turning out about three-quarters of their usual output. The lumbering tool factory is receiving early orders from the South, which shows that business is good in that section. There is under construction here a two hundred thousand dollar bridge, a one hundred and fifty thousand dollar manual training school, and a one hundred and seventy-five thousand dollar home for the blind, which will have a factory in connection with it for making brooms and other articles that the blind can work at. This being Presidential year, we only look for a moderate Fall business.

MORLEY BROTHERS.

THE ST. PAUL TRADE.

The crop prospects in our territory are not now as good as they promised to be, as black rust showed itself some weeks ago and the reports are very variable. The definite information necessary to arrive at a fair conclusion cannot be arrived at until the grain is threshed, though there is no doubt of a considerable loss in

Digitized by Google

the yield. Business is good considering all the conditions. The action of the Steel Wire Co., by reducing the price of wire and nails has had a bad effect, inasmuch as the trade think all prices will be reduced, though we know such will not be the case, as we judge their action to be due to outside competition becoming too aggressive, and they desired to teach outsiders a lesson.

Hackett, Walther, Gates Hardware Co.

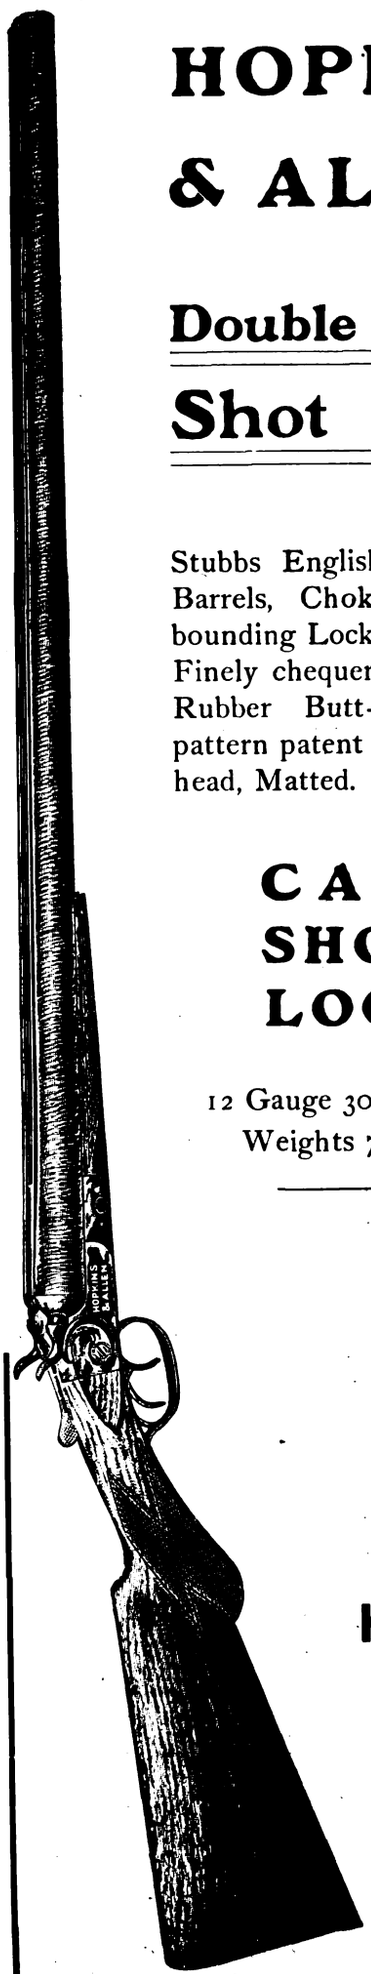
THE DAVENPORT TRADE.

Wheat and corn are going up and nails and wire are coming down. We cannot figure out how this will in any way injure owners of grain fields in Iowa, where every prospect pleases and all the farmers smile. There has been a decided improvement in the volume of business the first half of this month compared with the sales of a year ago. The C. R. I. & P. machine and repair shops are nearing completion. It is said that the company has already expended a million and a half dollars on them, and that within a short time they will employ one thousand or more skilled workmen, thus adding at least three or four thousand to the population in this neck of the woods. The Davenport & Suburban Electric Railway started their first cars this week and report a very satisfactory passenger business, on the basis of six tickets for a quarter. The I. & I. trolley line will probably open their line for freight and passenger traffic to Clinton within a few days. As far as weather is concerned Davenport has been a veritable summer resort all this season, and everyone regrets the rapid passing of this good old summer time.

Sickels, Preston & Nutting Co.

THE SAN FRANCISCO TRADE.

In this department of the issue of Hardware two weeks ago reference was made to an unpleasant and serious coast trade feature relating to Russian seizures of mercantile shipping from this port to Japan, and the need for strictest attention for the preservation of our Oriental trade. Now, happily, it is statable that San Francisco's Hardware and other merchants have bestirred themselves into energetic activity touching the situation and have already taken steps to present further interference in this valuable trade, which means so much to San Francisco and the whole Pacific coast, which the merchants unanimously say is the natural geographical field, depot and supply area for the Orient, and that it must continue so and not be diverted from us by war between Oriental nations.



At a meeting the other day of the Chamber of Commerce, which includes in its membership a representative number of the city's wholesale and retail Hardware men, the following resolution was adopted:

"That we hereby respectfully request the members of the Senate and House of Representatives from California to cooperate with the War Department in any efforts made to secure appropriations from the National Congress for the erection in San Francisco of a military depot for quartermaster's stores and the construction of docks for the army transport service."

California's senior Senator, Hon. Geo. C. Perkins, who used to sell Hardware, was present at this meeting and delivered a much appreciated address.

Undoubtedly it is pretty generally known throughout the United States of America and all other enlightened countries that San Francisco is in the midst of preparation as never before, and has been for a month or so, that next month this city and State purposes setting a new record for hospitality, incidental to the meeting in this Far West metropolis of the Twenty-ninth triennial conclave of Knights Templar, an important coming event that already gives promise, says the railroad and water transportation lines, of a grand rally here of upward of 100,000 Sir Knights and their families. Noticing in to-day's (August 15) *Chronicle*, in a group of portraits of Sir Knights who are active workers in preparation committees, the familiar features of very Eminent Grand Commander of California, W. Frank Pierce, of Pierce Bros. Hardware Company, Oakland; Grand Generalissimo B. P. Flint, of the Flint Carriage Hardware Company, of this city, and Sir Knight A. A. Watkins, vice-president of the W. W. Montague Hardware Company, prompts me to add that the Hardware trade of this city and State and coast is very largely representative of the excellent order whose motto is *In hoc signo vinces*.

A new innovation in coast Hardware circles is embraced in the one more onward step in the advancing line of policy being pursued by the Dunham, Carrigan & Hayden Company. In other words the company has transferred to its main house in this city C. W. Gause, who during the last four years and more has been in charge of the company's New York office. Mr. Gause's new assignment is to do service as consulting and advisory factor in

FILES AND RASPS
NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

direct connection with the sales department, thus bringing all the house conditions into a very close connection.

The sight of a bleeding deer suspended at the entrance to the Osborn Hardware and Tool Company is a reminder to say that J. P. Eisenmann, president of the company, is roaming the nearby mountains with his gun, and furthermore to add that since the fifteenth of last month the open season for antelope, buck deer, moose and mountain sheep has been on, the crack of myriad rifles have been heard. For this first month of the three-and-a-half month season all of the gun stores and Hardware stores that carry sporting goods report that they have thus far sold more than the usual amount of guns and ammunition.

In the center of the salesroom of the Henry Gracey Hardware Company's store a handsome eight-hundred-dollar glazed office, with polished hardwood facing has been constructed for exclusive devotion to business pertaining to the California State Retail Hardware Association, of which Mr. Gracey is secretary. This State official of the trade reports everything connected with the business as between the wholesale trade and retail dealers is progressing in harmonious order throughout the State; that the rate-cutting ban of the recent past is no more heard of.

INDUSTRIAL PRESS ASSOCIATION.

EVEN SAD IRONS WEAR OUT.

I have a word of comfort for the sad-iron maker, that is to say, the manufacturer of sad irons, writes "Vulcan" in *The Ironmonger*. Hitherto that individual has had the sympathy of most of us because of the limitations with which his trade is invested. Sad-irons, for instance, are not subject to change of fashion, nor do they readily wear out; "age does not wither" them nor "custom stale." Hence it is not a bit of good piling them into the window and labelling them "last season's stock" or "sweeping reductions," or anything of that kind; nor is it any use offering them at thirteen to the dozen. People will not rush to buy them. One flat iron at a time is enough for most people, and too many for some. An American experimentalist has discovered, however, that when iron is heated to a high temperature repeatedly it increases permanently in bulk and becomes porous. If that is so, it is evident that when a sad iron has been in use for some time and has become expanded, and consequently porous, its capacity for acquiring and retaining heat must diminish considerably; hence, though the housewife may not as yet be aware of it, her sad iron is steadily losing tone—growing old, in fact—and if she would get the best economic results from her labors, it ought to be renewed.

ARMY AND NAVY STORES.

CENT PER CENT AND SOMETHING OVER.

The annual report of the Army and Navy Co-operative Society (Lim.), of London, better known as the "Army and Navy Stores," is a tantalizing document—tantalizing, that is to say, to the "unlimited" retailer whose struggle for existence is rendered so much harder because of these so-called "Co-operative Stores." The figures of the year's trading show that the average takings per working day exceed 10,000 pounds—in other words, the sales during the year ended February 1, 1904, amounted to 3,237,721 pounds, in addition to which "miscellaneous revenue" totalled 12,730 pounds. The gross profits were 492,527 pounds, and the working expenses 290,873, leaving a net profit of 201,654 pounds. As a balance of 47,773 pounds was brought forward from the previous year's trading a disposable balance of 202,365 remains after deduction of the income-tax and of the interim dividend paid. This surplus the directors propose to apportion in the payment of a final dividend of 7s. 6d. a share, free of income tax, in grants to the directors, auditors, and staff (1,700 pounds)), in placing 9,000 pounds to the provident, and 20,000 pounds to the contingencies fund, allowing 500 pounds for auditors' fees, and 1,500 pounds for discretionary retirement allowances for the Indian service of the company, and in carrying forward 52,008 pounds, or not much less than the fully-paid capital. A final dividend for the year of 7s. 6d. per share on a full-paid 4s. share is almost a return exceeding the dreams of avarice. It will take a good deal of price-maintaining to make a breach in such profits.

IS THE CLOSED SHOP ILLEGAL?

The number of strikes ordered is likely to be considerably reduced as the result of a decision handed down recently in the Appellate Court of Illinois. In the case of the Kellogg Switchboard Company, of Chicago, which turned in part on an agreement between employes and employers limiting the former in the company's shops to members of unions, the Illinois Court laid down this principle:

> Article one of the agreement strikes at the right of contract and provides that complainant shall employ none but persons of the several unions, thus discriminating in favor of one class of men and excluding all others. The agreement in question would, if executed, tend to create a monopoly in favor of the members of the different unions and is in this respect unlawful. Contracts, tending to create a monopoly are void.

The court holds further that a workman seeking work cannot be shut out by any such agreement as the one in question, from his right to contract with any employer. If such an agreement stands in his way, his lawful right is interfered with.

Such is the view of the highest Illinois court. It might be well if the point could be carried to the United States Supreme Court. But unless the parties in interest do carry it there, it will stand as a precedent. It strikes vitally at the principle of the closed shop; for, though it prevents no union man from going on strike against the employement of non-union men, it does operate to prevent agreements between employers and employees restricting work to union men.—*Mail* (N.Y.)

OUR BRITISH LETTER.

By our Special Correspondent.

London, August 13th, 1904.

THE PRESENT POSITION OF BRITISH TRADE.

British manufacturers and retailers, too, are considering the report of the Commission in reference to trade, which has been issued recently. The section now presented to the public deals with the iron and steel trades of Great Britain, and is a careful scrutiny into the present status of British trade and an enquiry into its development during recent years. The statistics of imports and exports of the country show startling figures, and reveal an undesirable position in reference to British imports and exports. The manufacturers of iron and steel have gained ground in the United States during the past two years, and the energy of American merchants and shippers has gone apace. American agencies have been opened up in this country, and Hardware goods introduced into the homes of British people. Ironmongers have helped on the importation of goods from over the water, and doubtless free trade and the absence of import duties here, have contributed in no small measure to the successful operations of Americans in their development of trade with Great Britain. Whatever measures may be considered necessary in the future, in order to keep up the balance of trade in the interests of the nation's prosperity, there can be no doubt that American goods will continue popular, and find their accustomed place in Hardware stocks. The low over-seas freights compared with the heavy railway charges for short distances inland give imported goods an advantage. British makers, with their heavy expenses and the powerful trade unions they have to contend with, are handicapped in their struggle for continued prosperity. The exports of Great Britain must go on rising in proportion to the export business of other countries, in order to keep up the commercial status and welfare of the people of these islands. It is, therefore, clear that something must be done by the government in order to stay unfair dumping and under-selling. Hardwaremen recognize this, and as each trader is one unit in the great building of the State, each one must take his share in the responsibility of working out a scheme for the welfare of all, not overlooking the continuance of friendly competition, and the interchange of commerce with the United States, upon which the rise and fall of imports and exports in Great Britain so largely depends.

AUGUST IN ENGLAND.

It is holiday time and wherever one goes "away on holiday" is the greeting. Travellers' sheets are mostly filled up with the same legend, and blank lines tell the same woeful tale. Retail ironmongers have had enough of Hardware, and are away at the seaside with their wives and families, disporting themselves in the briny or lolling about on the shore. Ironmongers' associations find it necessary to adjourn until September, "owing to so many members being out of town," and even the canvassers of trade journals fail to secure advertisements, either because makers and advertisers' agents have "left no instructions" or on account of "so many ironmongers are away in August, you know, and therefore no one will read an ad." So the excuses (?) run on, and ironmongers continue to enjoy themselves. There are some restless, energetic souls who stick to the ship, and others too careful to waste money upon idle pleasure, but the majority recognize that health-giving rest and a brief respite from the cares of commercial life, and the rush of modern business toil, is an absolute necessity, nowadays. If life is to be prolonged, the keen eye preserved without loss of fire, and the brain power in its full vigor, a suspension of worry must be obtained at all costs. So August is the general holiday month, and the seaside watering places are full to overflowing. To a certain extent a migration from the towns to the coast brings trade with it, and coast-town ironmongers stay at their places of business and gather in their harvest. Visitors, however, do not carry much Hardware trade with them, and hotel and restaurant keepers have already made their purchases of new culinary utensils and domestic Hardware. Still, some business is done by those ironmongers who sell fancy metal and other artistic goods suitable for presents. The practice of taking gifts for those who stay at home is still carried on to some extent, but the custom diminishes year by year as the habit of general holiday-making grows and extends. Cheap trains opening up inexpensive resorts, and the provision for all classes of excursionists and tourists, makes it possible for all to get a holiday, even if it consists only in an annual employers' outing, or a one-day's bean feast.

IRONMONGERS' ASSISTANTS.

The association movement in connection with the Hardware trade has passed through another phase in its career in consequence of the foundation of an association for assistants just formed at Liverpool. The institution of a scheme of annual examinations whereby assistants could obtain certificates of proficiency and carry about with them a guarantee that they were at least grounded in a knowledge of the rudiments of the business has shown them that their employers are willing to better their position and raise their status in the trade. This, coupled with the thorough go-ahead enterprise of T. A. Cookson, the secretary of the Liverpool Ironmongers' Association, has emboldened the assistants of Liverpool to form the first ironmongers' assistants' association in Great Britain. It is a step in the right direction and will tend to give assistants a *locus standi* in the trade, and eventually a voice of the discussion of trade matters in which their help may be beneficial to their employers. Ironmongers must learn to realize that the interests of both are identical, and assistants that their salaries have to be paid out of trade profits which must be earned. The evils associated with trade unions in this country arise, chiefly, out of want of harmony between masters and men, and the feeling, often created and fostered by paid officials, that the interests of the two parties are antagonistic. Such ideas are very unwise, and it is to be hoped that the associations of ironmongers' assistants now being founded will steer clear of all such ideas. A rule has been introduced into the constitution which provides that employers in sympathy with the association may become honorary members. There are many level-headed men among the managers and assistants at the Liverpool ironmongers' shops, and they will know how to "set the pace." Assistants' associations will spread, depend upon it!

BRITISH ENGINEERS IN AMERICA.

At a recent meeting of the Institution of Mechanical Engineers at Westminster, Mr. Wicksteed gave some interesting accounts of American works, some two hundred or which had been open to members of the Institute during their recent visit to the United States. He spoke of the different types of tools he had seen in American workshops, and expressed some surprise at the variety of methods adopted in different works. He considered one secret of success was the strong belief manufacturers and engineers have in their own methods, and the determination with which they pursued them to a successful issue. J. W. Spencer, of Newcastle-on-Tyne, said he did not find anything in America much beyond those plans adopted in the best establishments in Great Britain, but what astonished him most was the enormous enterprise and large plant and machinery laid down to do the work. In short, American manufacturers aimed at a large output, and were thus enabled to manufacture at bottom prices, and to place their goods on the market far more economically than manufacturers with small works and inefficient plant. It was stated at the meeting that British trade unions are largely responsible for the number of advanced skilled workmen emigrating from this country to the United States. It appears that many of the best and most advanced mechanics, rebelling against the pressure brought to bear upon them by trade unions, emigrate to a freer land where they are enabled to exercise their skill, and to give vent to their advanced ideas and superior knowledge. Such workmen are welcomed by American manufacturers, who recognize the advantages of superior craftsmen.

THE USE OF GAS HEATING AND COOKING STOVES IS ON THE INCREASE.

There has been considerable development during recent years in connection with the manufacture of gas stoves, both for heating and cooking purposes. The general use of gas cookers in almost every household has led to an enormous increase in the output of such stoves, and gas companies and private enterprise have popularized this method of cooking and heating. Scientific skill has been brought to bear upon the construction of burners, which at one time were very inefficient, and combustion has now been secured, so that gas cooking appliances can be used not only with perfect safety, but with economy. A more recent development takes the form of combination appliances by which cooking, heating and warming stoves all in one apparatus can be placed at the disposal of small households. These are admirably adapted to the requirements of small flats and model dwellings; they are also suitable for cottage homes, as their economical properties, coupled with the convenience of penny-in-the-slot gas

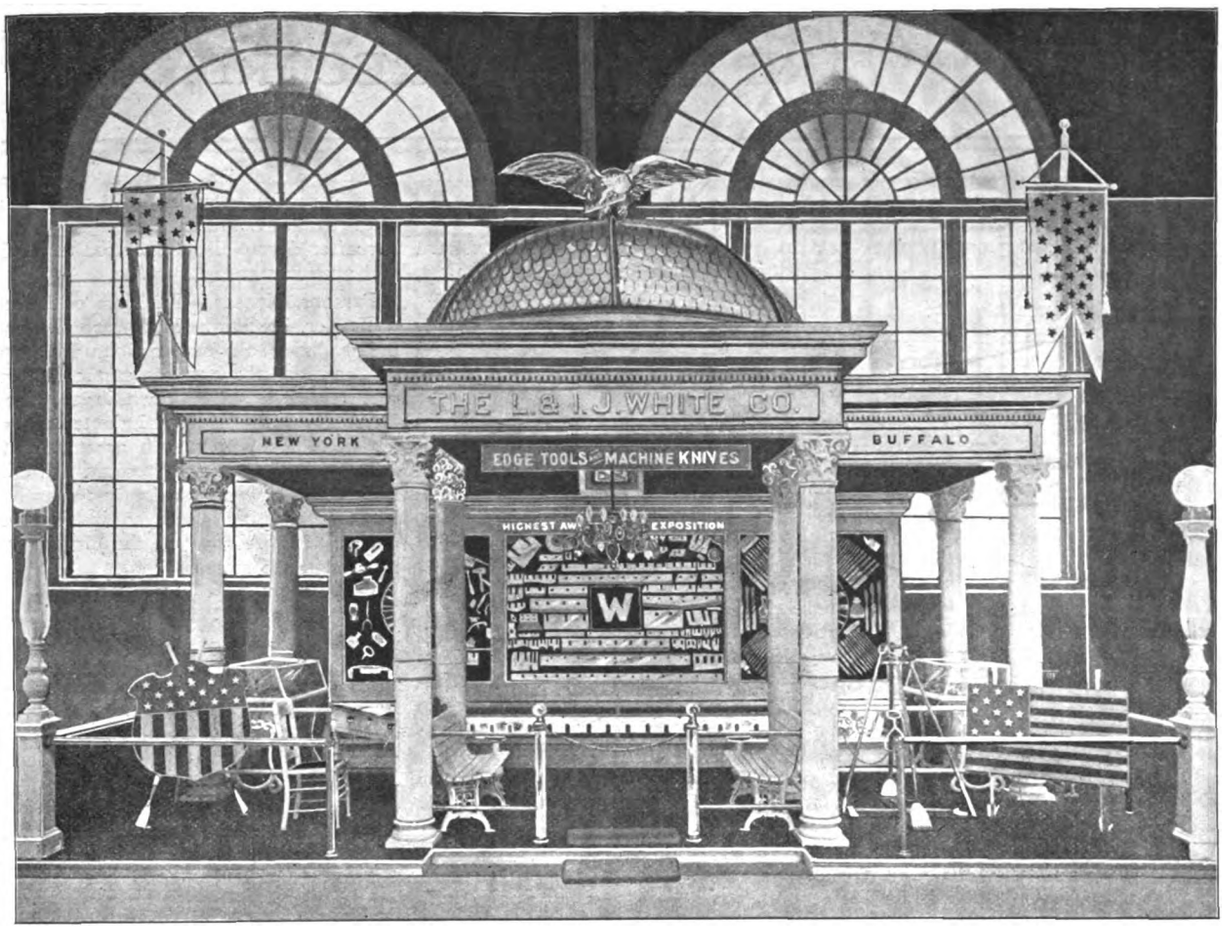
meters now available in every locality, should lead to their general use. American stoves, self-setting ranges and such appliances have often been introduced with good results in this country, but the British public has never taken kindly to the use of American heating stoves, especially those from which a sight of the fire is absent. Several French manufacturers have, however, got over the difficulty by introducing in this country some beautifully constructed French stoves, of light appearance, enamelled in an artistic manner, and so constructed as to give a bright, cheerful, visible fire. Such stoves for gas and also for wood and coal are gaining some popularity in Great Britain. Cleanliness and labor-saving properties are now fully appreciated, and are absolutely necessary in small dwellings, and especially in large towns where so many middle-class people reside in flats and maisonettes.

THE NATIONAL SWEEPER COMPANY'S EXHIBIT.

What is generally admitted to be the handsomest exhibition ever given of Carpet Sweepers is that of the National Sweeper Company, of Marion, Ind., at the World's Fair, St. Louis. The exhibit, which we illustrate herewith, is in the Manufacturers' Building, Block 12A, corner 4th and A streets. At the top of the booth is a handsome oil painting of life-size female figures in a field of golden rod. The large wheel at the top is an enlarged model of the famous roller bearing used on the National Sweepers. This wheel is 8 feet in diameter and is studded on the rim with electric lights; it revolves and turns on its axis, making a very attractive illumination. On two sides of the booth are large plate glass show cases, inside of which are shown models of the different sweepers manufactured by this concern. These models are constantly in motion, propelled by some mysterious power, and they naturally attract a great deal of attention and comment. On the other two sides of the booth in the interior are shown other models on the National's product set in panels, making an exceedingly handsome appearance. The pillars and ceiling are thickly set with electric lights, nearly 400 bulbs being used in the exhibit. One main feature of the exhibit is what is known as the Sheraton line; this sweeper is regularly made in marble wood imported from the Philippines, caramandel from Japan, and Seneca wood from South America, but in the exhibit a display is made of every known beautiful wood, nearly 100 different kinds being used coming from all parts of the world. The National Sweeper Company have established a reputation for handsome goods, and are manufacturing to-day Sweepers that sell as high as $20 each. The interior of the booth is arranged as a reception room, with writing desks, easy chairs, etc., and is in charge of one of the representatives of the concern and a demonstrator, assisted by a maid.



THE NATIONAL SWEEPER COMPANY'S EXHIBIT.

"TAKE OFF YOUR HAT TO THE MEYERS."

F. E. Meyers & Bro. have already made prominent the above significant line, but in order to tell the whole story and leave no doubt in the mind of what they mean, they have secured an advertising novelty which clinches it beyond dispute. To obtain one and see how successfully this is accomplished, you have only to drop them a line requesting it to Ashland, Ohio.

L. & I. J. WHITE CO.'S EXHIBIT AT WORLD'S FAIR.

L. & I. J. WHITE COMPANY.

L. & I. J. White Company, Buffalo, N. Y., have a valuable display of their goods in the southeast corner of the Machinery Building of the World's Fair, to which they call the attention to the trade. In the exhibit will be found a full and complete line of knives and tools of the highest quality of workmanship. A visit will be interesting and will prove profitable. Their representative will be in attendance at all times and will be pleased to explain their display in detail and furnish any desired information relative thereto. They also have a display of cooper's tools in connection with the exhibit of the Chickasaw Cooperage Co., Memphis, Tenn., showing the sidderent steps in manufacture of cooperage, located in Space 34 in the Forestry Building. The L. & I. J. White Company are manufacturers of Edge Tools and Machine Knives, Coopers', Carpenters' and Ship Tools, Plane Irons, full line of Chisels, Butchers' and Ice Tools, planing, molding, paper, veneer, shingle and leather-splitting knives, shear blades, also cutting dies of every description.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Aberdeen, Ala. — Henderson Hardware Company, Aberdeen, has been incorporated Capital stock, $50,000. Incorporators: W. S. Carlton, Jno. B. McFarland and others.

Au Gres, Mich.—William H. Schaitberger, formerly with Morley Brothers, has purchased the Hardware store of George Grimore. Mr. Schaitbeger has been with Morley Bros. the past six years. In leaving Saginaw he parted with many friends who wish him success in his business venture.

Chester, Pa.—Joseph Harper, who has been interested for some time here in the iron business, has purchased the stock of D. P. Paiste's Hardware store, and hereafter the business will be conducted under the name, "The Paiste-Harper Hardware Company." The store will be remodeled and finished in modern style. Mr. Paiste has been in business here for thirty-two years.

Des Moines, Ia.—Articles of incorporation of the L. H. Kurtz Company have been filed. The amount of the capital is $30,000, and the incorporators are L. H. and L. C. Kurtz. The company will take over the business of L. H. Kurtz, consisting of a Hardware stock and plumbing business. L. C. Kurtz will be secretary and manager of the new company, and becomes financially interested in the business, having been identified with it in the past as salaried manager.

Dispatch, N. Y.—Ernest A. Young and George W. Carr have opened a Hardware store in West Commercial street.

Indianapolis, Ind.—The William R. Watson Hardware Company, of Indianapolis, was incorporated to-day, with a capital of $15,000. The incorporators are: William R. Watson Martha C. Watson and James Watson.

Lansing, Mich.—Articles of association of the Dunham Hardware Co. were filed to cover the Dunham business interests at North Lansing. The capital is $20,000, and the stockholders are Paul E. Dunham and wife and Milo Walker.

McGregor, Texas.—Lyon Implement and Hardware Company, McGregor, has been incorporated with a capital stock of $10,000. Incorporators: F. M. Lyon, F. P. Lyon and J. W. Bradshaw.

McKeesport, Pa.—C. B. Sherrick opened a Hardware store in the Gongaware building on Fifth avenue.

McKeesport, Pa.—The Turner Hardware Co. has been incorporated at $7,000. Directors: George Turner, Margaret Turner, Nellie Turner, B. H. Pettes, H. J. McAllister, McKeesport.

Newport, R. I.—Russell Neiman, of West Marshall street, and Charles F. Frey, of Stanbridge street, have formed a partnership to carry on the stove, Hardware and general tinsmithing business. The firm name will be Neiman & Frey. The new firm have bought the interest of Margaret Neiman in the business at the Marshall street stand, and will continue it in all its branches, Mr. Neiman giving his attention to the store as at present, and Mr. Frey managing the outside work of the firm.

Ramseur, N. C.—The Watkins-Leonard Company has been incorporated. Object, the sale of Hardware, drugs and other merchandise, wholesale and retail. Authorized capital stock, $25,000 Incorporators: E. C. Watkins, W. H. Watkins, E. B. Leonard, I. F. Craven. Initial capital on which business begins, $10,000.

St. Clairsville, O.—Two well-known young Wheeling men, Stack Hoge and Arthur Brill, have formed a partnership and have gone into the retail Hardware business. The many friends of the young men will be glad to hear that they are getting along nicely, and that since their venture business has been excellent with them.

Scranton, Pa.—About the middle of August a new Hardware store will be opened in this city by E. P. Mitchell and Timothy Burke, who have formed a partnership for the purpose of engaging in that business. Their store will be located at One Hundred and Sixteen Penn avenue, and in it a big line of general Hardware will be carried.

Summerton, S. C.—A commission for a charter was to-day issued to the Summerton Hardware Company, of Summerton. The capital stock is to be $5,000. Messrs. J. C. Lanham and J. A. James are the corporators.

Toledo, Ohio.—C. G. Barton, who formerly conducted the Auction Syndicate on Main street, has purchased from Campbell & Cramer the M. W. Canfield stock of Hardware on Starr avenue. Barton took possession yesterday and will conduct the business at the present location.

Trenton, N. J.—The Trenton Hardware Company of Trenton, capital $50,000. Incorporators: Charles E. Borden, Walter Emmons, and Charles B. Everdell.

Wilkes-Barre, Pa.—Edward Brotherton is building a new store on Wyoming avenue and when it is completed he will open a full line of Hardware.

Changes.

Chattanooga, Tenn.—F. H. Woodworth, the well-known Hardware dealer, recently purchased the Fritz & Wiehl block and will move into this building about September 1.

Delta, O.—A member has been added to the Hardware firm of F. Briggs & Son, in the person of Marion W. Briggs, son of the senior member of the firm. M. W. Briggs has been associated with the Bissell Electrical Co., of Toledo, as traveling salesman.

Erie, Pa.—The managers of the Boston Store last night effected an agreement and signed articles with A. S. Pinney, the well known Hardware merchant at No. 724 State street, whereby they at once take possession of his store and the entire stock which at present crowds the counters. The addition of the Pinney store will greatly increase the business capacity and floor space of the Boston Store. The newly acquired store has a frontage of 27½ feet and is 150 feet in length. This entire store will be used for display and sales purposes as soon as plans can be perfected.

Great Falls, Mich.—The Great Falls Hardware Company, which has been running a branch store at Havre for several months past under the name of the Havre Hardware Company, has sold out the same to the Havre Commercial Company and will hereafter devote all its attention to the Central avenue store.

Parsons, Kansas.—The firm of Kennedy & Fowler, dealers in Hardware and implements, have sold out to John Maher and will continue the business at the old stand. Mr. Maher is well known in and around Parsons, having lived in Labette county all his life. He will have a great advantage in starting here on that account and doubtless will be able to build up an even better business that that enjoyed by his predecessor. Mr. Adams, of the old firm, will remain in the store.

Pine Bluff, Ark.—Fox Brothers, the Hardware dealers, are making extensive improvements in both their retail and wholesale buildings. Work began this morning upon their building on Main street, opposite the post office, to which another story is to be added. Hereafter all the wholesale business of the firm will be transacted at this place and the retail department will be conducted at their other store on Main street. The retail store is being improved by a new plate glass front and a new floor.

Rockford, Ill.—L. C. Patterson has been made manager of the Rockford Manufacturing Company, succeeding D. R. Lewis in that capacity. Mr. Patterson for eighteen years was connected with the Keystone Manufacturing Company. Mr. Lewis will remain with the company, continuing as secretary.

South Portland, Me.—Charles A. Tilton has sold out his Hardware business to Chas. J. Tilton and William E. Allen. They will conduct the concern under the firm name of C. A. Tilton & Co. The senior Mr. Tilton will retain his desk with the concern but will retire from the active business of the firm.

Windom, Minn.—M. D. Gates has sold out his Hardware store to G. P. Selzer, who is now in possession.

Winona, Minn.—In order that it may greatly increase its merchant trade in the Hardware line through this territory, the R. D. Cone Hardware Company, of this city, has disposed of its entire stock of bar iron, steel, blacksmiths' tools and supplies wagon makers' supplies, woodstock hardwood, lumber, etc., to the Nichols, Dean & Gregg Company, of St. Paul. The stock is now being placed in readiness for shipment to St. Paul; however, the Cone Company will be able to fill all orders in these lines until the stock has been shipped. W. J. Landon, of the Cone Company, states that in the future the company will confine its business to the merchant trade, and will handle a larger and more complete stock in the future than in the past. It is said that the next move of the Cone Company will be to dispose of its retail department in this city. While carrying the stock now sold to the St. Paul company it was necessary to have the retail department.

Woodward, Minn.—Morris & Miller, implement dealers, have dissolved, the business being continued by O. C. Miller.

Worthington, Minn.—S. M. Stewart has succeeded to the implement business of J. D. & W. I. Humiston.

Talking points sell goods, but if you depend entirely on the power of words to sell doorhangers the chances of sale are much less in your favor than if you had before you a full size display model Bischoff Doorhanger. Then you can indicate its ease of attachment, no cutting of door necessary, its great strength, supporting a weight of 2,200 pounds, and the angle shaped track which prevents clogging from dirt, snow or ice. Your customer sees with his eyes not his ears. It's the practical demonstration of these special features that sells Bischoff Doorhangers.

This piano finished display model doorhanger sent free with one dozen prs. of Bischoff Doorhangers, sent f. o. b. your city for $8.75 per dozen. Track 6½c. per foot.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Akron, Ohio.—The Safety Gas Burner Co. has been incorporated by C. J. McCormick, A. J. Rowley, Ira J. McCormick, S. G. Rogers and Laura A. Sellers. The capital stock is $20,000.

Chicago, Ill.—Aurora Light and Stove Works; capital, $2,500; manufacturing heating and lighting devices; incorporators: Karl C. Luehr, M. Bryon Rich, Ralph F. Potter.

Chicago, Ill.—Ideal Machine Company; capital stock, $50,000; manufacturing of machinery and tools. Incorporators: E. D. Wheeler, F. Mahoney and Charles J. O'Conner.

Chicago, Ill.—John Dompke Company; capital, $2,500; manufacturing Hardware; incorporators: Paul Carner, John A. Dompke and Lawrence N. Daleiden.

Hornellsville, N. Y.—The Truss and Cable Fence Company's plant situated on Cross Street near the railroad, is to be moved to Cleveland, Ohio, about September 1. The manufacture of the wire fencing for which the company owns patents will be continued in that city.

Magnolia, Ark.—Articles of incorporation were filed by the Magnolia Manufacturing Company. The company proposes to manufacture wheelbarrows and other articles of wood and metal. The capital stock is $50,000, of which $5,000 has been subscribed. The corporators are: J. L. Davis, D. M. Davis and C. E. Shumaker.

Manitowoc, Wis.—The Gunnell Tool Co.; capital stock, $5,000; incorporators: Elias Gunnell, Lynford E. Geer and Charles C. West.

Minneapolis, Minn.—The Homelite Company, manufacturers of novelties and Hardware specialties, filed its articles of incorporation yesterday. The capital stock is $25,000. Andrew G. Kelly, John Kelly and Bertha Kelly are the incorporators.

New York, N. Y.—J. M. Mossman Co., of New York city (manufacture locks). Capital, $60,000; directors: J. M. Mossman, T. F. Keating and James Hopkins, of New York city.

Philadelphia, Pa.—Henry M. Kreh, Herbert M. Christie and Richmond Parsons have filed with the Secretary of State the certificate of incorporation of the Imperial Rolling Window Screen Company, with a capital stock of $50,000. The particular purposes of the company are to manufacture an improved rolling window screen, the patents of which are owned by these men.

Quincy, Ill.—Lahan Stove & Manufacturing Company; capital, $25,000; manufacturing stoves and hollowware; incorporators: H. P. Behrensmeyer, Peter F. Miller, Edward J. Lahan.

Scranton, Pa.—Letters patent were recently issued by the State Department, two of the incorporators of which are women. The company receiving the charter is the T. M. Miller Company, which will engage in the manufacture of coffins and casket Hardware. Business will be started by the company with a capital of $50,000. The incorporators are: Sarah G. Miller, Maurice Miller and Myrtle B. Gay.

Spring City, Pa.—The Royersford Gas Stove Works, of this place, has again changed hands. Samuel Egolf, a well-known resident, has again purchased the plant, and with the assistance of his sons, Harry and Ellwood, will carry on the business.

Syracuse, N. Y.—The Syracuse Cutlery Company has been incorporated with a capital of $40,000 to manufacture razors and knives. The company will occupy the old county clerk's building.

Trenton, N. J.—Trenton Hardware Manufacturing Co., East State Street, Hamilton Township, Mercer County, N. J.; manufacture and sell Hardware; capital, $50,000. Incorporators: Charles E. Borden, Walter Emmons, Charles B. Everdell, Trenton, N. J.

Changes.

Albion, N. Y.—The assets of the Bromley Foundry Company were sold at auction to W. T. Bromley for $1,535. There were two electric motors, patterns, tools, machinery, manufactured goods, etc., valued at about $5,000. The capital stock was $10,000 and it is said that the stockholders will get back only about ten cents on the dollar.

Alliance, Ohio.—The Standard Bolt Works, one of the big manufacturing plants of the city, has decided to move to Fort Worth, Tex., where it will be nearer its source of supplies.

Birmingham, Ala.—The Empire Plow Company is enlarging its warehouse in order to meet the demands of its rapidly increasing trade. Recently the company erected another main building which covers a space of 40x160 feet and practically doubles the capacity of the plant. During the last year the Empire Company has spent over $20,000 for improvements. It is kept in operation over time filling the large number of orders that are constantly pouring in.

Bristol, Conn.—The Booth Manufacturing Company, manufacturer of brass Hardware, has sold its business to the Cheshire Novelty Company, of Cheshire, Conn.

Chattanooga, Tenn.—The H. Wetter Manufacturing Company has leased for a term of years the building formerly occupied by the Sequatchie Hoe and Tool Works and will at once remove the patterns, etc., and begin the manufacture in this building of their cheaper lines of stoves for which they have a large demand. Their new quarters will require about fifty additional men. The business of this company has steadily grown until they have now on their pay-roll three hundred and fifty men.

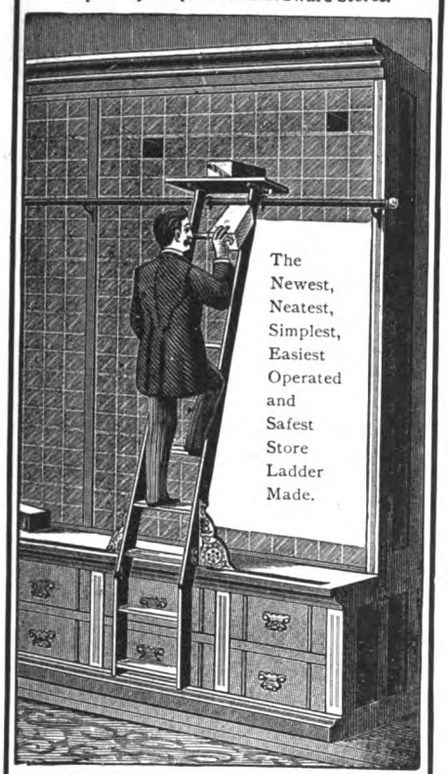
Detroit, Mich.—Chrysler & Koppin, refrigerator and cold storage equipment manufacturers, have recently purchased the easterly half of the Lowrie & Robinson lumber yard on Warren Avenue, at the Grand Trunk railway crossing, and have commenced the erection of a large factory.

Detroit, Mich.—The plant of the Stimpson Scale Co., which is located at Elkhart, has been moved here. It is the company's purpose to combine this with a branch in the Michigan city. The concern had over 100 employees at Elkhart and all these, together with their families, will migrate to Detroit.

Galesburg, Ill.—The Western Tool Co., which recently moved its shop from Chicago here, has begun operations in its new plant. This company makes a variety of small tools and specialties, including a new hose clamping tool.

New Britain, Conn.—President James S. North has issued the following statement: "The management of the New Britain Hardware Manufacturing Company has for some time had under consideration the desirability of discontinuing the manufacture of its general line of piano and organ Hardware and other special goods, competition in these lines being so keen that prices are unprofitable. A favorable opportunity arising to sell the buildings and real estate to Landers, Frary & Clark hastened the decision of the matter, and such a sale has been consummated. It is the intention of the New Britain Hardware Manufacturing Company to devote its energies to the perfection and manufacturing of a patented spring motor, controlled by it and used by the piano and organ trade. For the present at least the work will be done on the premises now occupied."

New York, N. Y.—The Findlay Axe & Tool Co., of Findlay, Ohio, has just established an office in this city at No. 35 Warren Street under the management of Max T. Christopher, who will attend to the jobbing trade in New England, New York, Pennsylvania, Maryland and part of Virginia, besides conducting the export department of the firm. This company manufactures a line of forged axes and tools together with new steel process axes, hatchets and adzes.



Rochester, N. Y.—The Lee & Morrison Company has found the stores on the Stone Street side of the Alliance Bank Building, occupied by it for a year past, inadequate to meet the demands of its rapidly increasing business, and has taken possession of the entire building at No. 24 Stone Street, adjoining the former quarters of the company. With greatly improved office facilities and spacious salesrooms the company is in better position to display the lines of the manufacturers whom it represents.

Superior, Wis.—The damaged Hardware stock of the Pease-Humphrey Hardware Company was sold to the Chicago Forwarding and Wrecking Company. The sale of the stock, however, does not mean that the Pease-Humphrey people will go out of business here as Mr. Pease announced that the firm would have a new stock and start up again at the same stand as soon as the building is put in shape for them.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Fremont, Ohio.—Joseph W. Thompson has purchased the stock of the Fremont Gun store and opened up for business.

Huntsville, Ala.—James F. Burnam, Milton Bamer and C. C. Green have incorporated the Wear-Proof Pneumatic Tire Protector Company, with a capital stock of $2,000, for the manufacture of a leather tire protector patented by Burnam.

Milwaukee, Wis.—The Merkel Mfg. Co. has changed its style and been incorporated as the Merkel Motor Co., with a capital of $200,000. The corporators are: A. B. Ferdinand and Joseph F. and William J. Merkel. They are adding automobiles to their productions.

Rahway, N. J.—D. R. Dunham & Son have been incorporated, with $100,000 capital; to manufacture and deal in coaches, automobiles, cars, bicycles and boats.

Changes.

Chicago, Ill.—The Chicago Sporting Goods Manufacturing Company has absorbed by purchase the entire movable plant of the Crockett Manufacturing Company of St. Louis and brought the whole outfit to Chicago. The machinery reached this city, filling two cars, and is being installed at the factory, 126-128 South Jefferson street. The purchase included the full equipment in every particular, dies, patterns, etc., also all the material not manufactured.

Chippewa Falls, Wis.—J. D. Hawley has disposed of his bicycle business at Eau Claire and has opened an establishment in this city.

Middletown, Conn.—Increasing business has made it necessary for J. F. Connery to remove from No. 224 Main street to larger quarters at No. 305 Main street.

New York, N. Y.—Fellows & Smith, of the Department store at Third and Westchester avenues, will add new departments to their store which will be improved at a cost of $20,000. There will be new departments for sporting goods, photo supplies and clothing.

Philadelphia, Pa.—The Pope Mfg. Co. has decided to close its branch store and to establish agencies there instead. The Pope store in Philadelphia, on Arch street, has been so closely identified with R. D. Garden, its manager, for so long that many know the place as Garden's establishment.

Rexville, N. Y.—The Empire Cycle Company is closing up business for good. The plant has been running for a number of years and has turned out several thousand bicycles. A number of skilled workmen will be thrown out of employment. It is said that the Motor Cycle Company which was organized here last year will remove to Waverly in the near future.

Taunton, Mass. — Edward McDonald, who has leased the store at No. 1 Broadway says that he will have his new place of business fitted in the best possible manner, and when completed he will use it for his jewelry department, together with phonographs, also a fine line of pianos, the latter being a new venture which Mr. McDonald is to take up. The place at No. 13 Broadway, now used as a jewelry store, will hereafter be devoted solely to the bicycle trade, with a repair shop located in the rear.

Fires.

Bangor, Me.—The loss by fire in the basement of the Bangor Sporting Goods Co. is estimated to be between $400 and $500 in goods stored. The damage to the building was slight. The loss was covered by policies in the agencies of Blake, Barrows & Brown, Henry Lord & Co., and Tyler, Fogg & Co.

Chautauqua, N. Y.—A fire which started in J. K. Miller's Hardware store extended to the bicycle store of C. L. Fox and completely destroyed it. No estimate of the damage is yet obtainable.

Elgin, Ill.—The Fauber Mfg. Co., one of the largest makers of bicycle parts in the country, and known everywhere as the originator of the one-piece crankhanger, at Elgin, Ill., was totally destroyed by fire. Recently there were some changes in the business of the Fauber Company, and it has been interested in the production of automobiles for a Detroit concern. Fourteen of these completed Marr automobiles and scores of others in various stages of manufacture were completely destroyed. The loss on the Fauber Manufacturing Company will be $175,000, with insurance to the amount of $150,000.

Embarrassments.

Allegheny, Pa.—A petition in bankruptcy has been filed by George E. Schmidt, a partner in the Keystone Cycle Co. He gives the firm's liabilities at $8,205.99, with no assets, and his personal assets as $160, with no debts.

Columbus, Ohio.—An assignment has been made by Walter B. Newhall, No. 23 East Gay street, for the benefit of his creditors. Harry H. Hawkins is named as assignee in the deed. The latter included all the book accounts, bicycles, sundries, fixtures, rubber goods, hose, matting and, in short, all the contents of the store.

Lancaster, Pa.—A petition was filed in the United States District Court at Philadelphia last week, asking that Horace B. Herr, trading as the Lancaster Cycle Company, be adjudged an involuntary bankrupt. Debts aggregating $700 are set out.

New Rochelle, N. Y.—Julia Weisskopf, dealer in bicycles, fishing tackle and cigars, has filed a petition in bankruptcy here, with liabilities $1,023 and nominal assets $1,629, consisting of stock $394 and accounts $1,235. Among her debtors are Rufus Hatch, $120, and John Mason, actor, $45.

Miscellaneous.

New Britain, Conn.—The Corbin Screw Corporation is adding front hubs to their productions, the idea being, of course, to have them of a pattern harmonizing with their coaster brake hubs, and thus increase the symmetrical appearance of the completed bicycle. The hub for motor bicycles is ready for marketing, and the one for the pedal propelled machines is well under way.

GERMAN TOOL MANUFACTURERS WANT PROTECTION.

The Association of German Tool Manufacturers, says James H. Worman, Consul-General, Munich, Germany, have urged the Imperial government to prevent the further inroads of American manufacturers upon their special branches. It is claimed that in the first quarter of this year the import of tools had more than doubled, having increased from 245 tons to 526 tons, and that in the second quarter the increase threatens to become even larger. They make a special point of the fact that he United States Government levies a tax of 45 per cent on German machines, against the German tariff of 5 per cent., and they insist that German machines are in no wise inferior to the American and that there is no need whatever for the introduction of American machines and tools into Germany.

WRITE FOR QUOTATIONS

Mention "Hardware."

Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.

Catalogue and information free.

Address Dept. H,

THE
American Steel Roofing Co.
Middletown, O.

AMES SWORD CO.,

CHICOPEE, MASS.

MANUFACTURERS OF

Patent Perfection Padlocks.

All sizes, ½ in. to 2½ ins. *Send for Catalogue.*

Patented in all countries.

CARY MFG. CO.,
19 & 21 Roosevelt Street, New York.
Cable Address: CARLEIO

You Can Fool

some mechanics all the time and all mechanics some of the time on the question of Marking Gauges but—you can't fool all mechanics all the time when you try to offer them a substitute for

Winslow's Adjustable Face Marking Gauge

Loosen its thumb-screw, adjust its face to any irregular surface, and it'll gauge it handily and quickly. That's why we've sold so many of them to wood workers.

They have found it to be better than other kinds.

Why not send us your trial order?

Mossberg Wrench Company,
Central Falls, R. I.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

OUR GUARANTEE

We guarantee Pitkin's Barn Paint to wear well at least

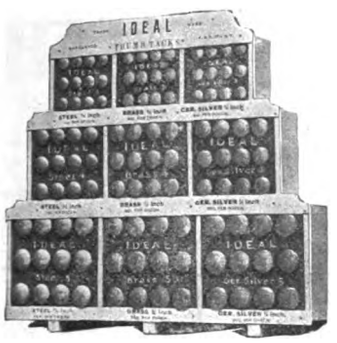
FIVE YEARS

When properly applied on a good surface. If it does not prove to be exactly as represented by us, we hereby agree to furnish paint to repaint free of charge.

On a 50-gal. Assortment
Consisting of { 20 1-gal. Cans and 6 5-gal. Cans.
we will make you a special discount and allow freight.

On a 100-gal. Assortment
Consisting of { 20 1-gal. Cans and 16 5-gal. Cans.
we will make you an extra discount and allow freight.

We make a straight price for these assortments. You do not have to buy more than these amounts in order to get the price.



If you are interested in getting the best BARN PAINT on the market, and the best advertised, at an extremely low price, write to us for our proposition.

"A Tough Proposition"

for a sledgehammer is the newest and best Screw-Driver on the market to-day:

THOMSON'S INDESTRUCTIBLE

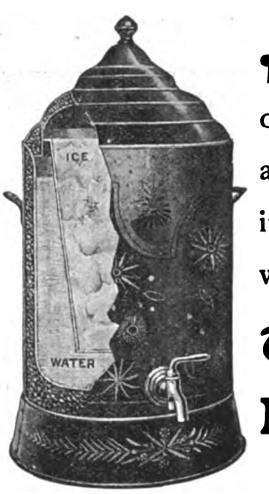
It's the best proposition for you though, because it is, as its name implies, indestructible.

* * *

We don't just say it's indestructible—

We Guarantee

it's being so, because it's drop-forged from the best steel—cap, ferrule and blade, which is of one piece, extending through handle to cap.



* * *

Sizes 2½ to 30 inches.

* * *

We make all kinds of drop-forgings.

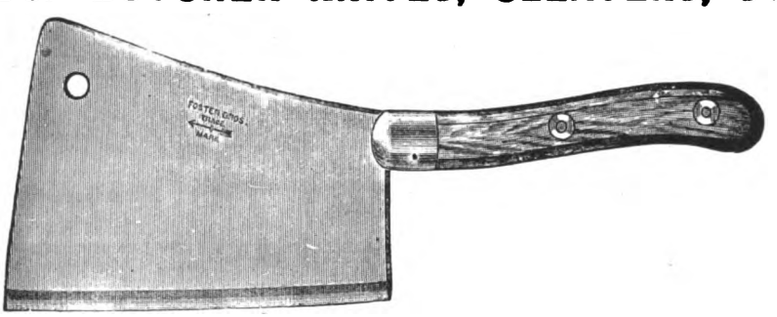
CHATILLON SPRING SCALES.

OUR attention having been called to the fact tnat inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

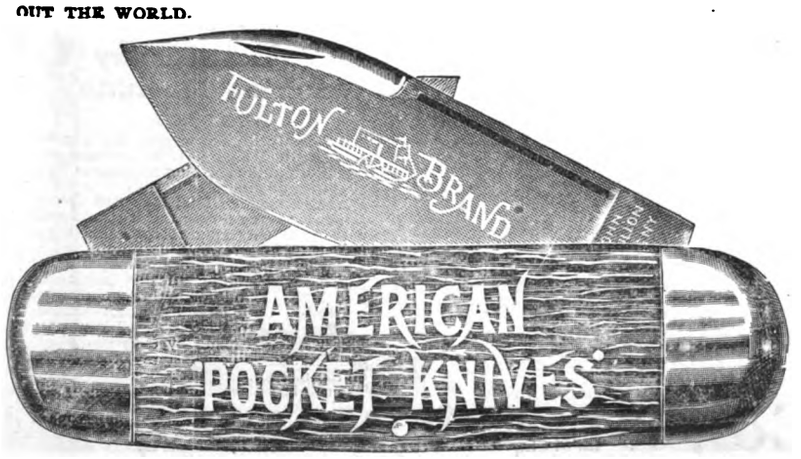


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user

WHY IS THE **O.K.**

***The* Best Rotary Washing Machine?**

BECAUSE

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the **friction** and thus making machine so **light running** and almost **noiseless.**

2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).

3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without **rubbing** them to pieces.

4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.

5.—The tub has a wringer box fastened with steel brackets.

6.—The lid on the tub closes tight, **no escape of steam.**

EVERY dealer should handle the Genuine Buckeye Pruner, because he can carefully push it to his best trade, in preference to any other pruner made.

Because it has stood the test of actual use for over 30 years.

Because it is the strongest made---the blades being hand-forged.

Because no other made cuts so easily.

It operates just opposite from other pruners. Grasp the limb with the hook, and cut towards you. It's quicker and easier than the other way.

Size 25—inch.

One dozen in a case.

HARDWARE

Bommer Brothers, Brooklyn, N. Y., extend a cordial invitation to their friends and customers to visit its interesting exhibit at the St. Louis Exposition. It will be found at the corner of aisles 5 and C, Palace of Manufactures.

✤

Up to August 27th there has been sixty-two thousand, four hundred visitors to the Warren Model Hardware store at the World's Fair. This shows the interesting character of the exhibit and how it appeals to the average Hardwareman. It should not be neglected by any one contemplating a visit, as it is educational in the highest degree.

✤

The Arcade Manufacturing Co., Freeport, Ill., who was sued by the Stover Mfg. Co., for infringement, won the suit, they believing their "Gem" Mop Head made by the Arcade people infringed their patents, the decision of the United States Circuit Court for the Northern District of Illinois being in the favor of the Arcade Mfg. Co. The decision reviewed the claims of the Stover Manufacturing Co., and stated that "the 'Gem' Mop did not infringe the Stover patents," and dismissed the suit. The customers of the Arcade Manufacturing Co. are now at liberty to handle the "Gem" Mop without danger of interference.

✤

F. E. Myers & Bro., Ashland, Ohio, have lately added to their office force J. C. Frentz, formerly of the American Seeding Machine Co., of Springfield, O. Mr. Frentz has had many years' experience in office work, and was lately employed in the collection department of the American Seeding Machine Co. He will no doubt prove a valuable man to his new employers.

✤

Something new in butcher knives for household use is advertised in this issue by Goodell Company, 106 Main Street, Antrim, N. H. The peculiar design of the blade gives a long cutting edge where most used, and the handle "fits the hand." The ornamental swage, and in fact the whole appearance of the knife, will attract the attention of customers.

✤

The Treasury Department of the Government of Cuba has issued a circular in which it is announced that in the future no consular invoices will be required in the shipment to Cuba of merchandise not exceeding $50 in value.

✤

The American International Harvester Company is negotiating with the city of Brantford, Ontario, for the establishment of branch works there for the manufacture of plows, etc.

✤

The plant of the Imperial Steel and Wire Company, of Collingwood, Ontario, is about completed, and its products will be in the market this month. It will be one of the best wire-drawing plants in America, being planned to give an output of 100 tons of wire daily. The buildings are of brick, consisting of a boiler house 40 by 35 feet, an engine room 50 by 35 feet, a wire-cleaning and acid mill 100 by 70 feet, a wire-drawing mill 200 by 60 feet, a wire-nail mill 200 by 60 feet, and a galvanizing mill 225 by 50 feet. The buildings are served by two railway switches, and cover an area of about 5 acres. Ample room is provided also for a 100-ton wire-rod mill, which will be built this year.

✤

William G. Van Ness has been elected a director of the Allerton-Clarke Company, 97 Chambers Street, New York, to fill the vacancy caused by the death of Thomas W. Munroe, Mr. Van Ness also succeeding Mr. Munroe as secretary of the company. Mr. Van Ness has been connected with the house and its predecessors for the past 15 years.

✤

Charles H. Turner, president of the Albany Hardware & Iron Company, Albany, N. Y., has been tendered and has accepted the office of juror on the board which will name and grade the awards in the exhibition of Cutlery, Hardware, Plumbing, Sanitary Materials, Heating and Ventilating Apparatus, etc., at the St. Louis World's Fair. The duties of the board will begin the first of next month and continue two weeks. No better man for the position could have been selected. His long experience and fitness are well known.

Strange as it may seem, China is the largest purchaser of German needles. Indeed, about 50 per cent. of the needles exported from Germany are sent to China. The total value of the needles exported from the United States to China during the year ending June 30, 1902, amounted to $2.

✤

Athletic sports, to which only a few years ago little attention was paid in Germany, are now being indulged in by very large numbers. Tennis and football are perhaps more popular than in the United States. Athletic goods of all kinds, especially footballs, tennis balls, rackets, and shoes, and golf balls and clubs, are being imported into Germany from England in considerable quantities. The American manufacturer of sporting goods has perhaps never made an effort to enter upon an export business. The possibility of selling quantities of goods to Germany and other European countries would appear to be worth looking into.

NICE ORDER FOR HARDWARE.

The hardware for the new Chicago postoffice building is now being made at the Chicago Hardware Foundry Company's factory at North Chicago. The bill will be $20,000. It includes all the locks, door knobs, hinges and hardware ornaments. The company furnishes its own model and patterns. An order for $25,000 worth of the same goods has just been completed for the new First National Bank building at Chicago. These are some of the largest orders for such work given out for a long period.

SURCHARGE ON CATALOGUES IN AUSTRALIA.

Exporters will be interested in the announcement that a postal surcharge will be placed on all catalogues and price lists sent to the Australian Commonwealth after September 1, 1904, according to the following copy of the notification issued by that Government: "In connection with the Federal customs duty of 3d. per pound on advertising matter sent to Australia and the concession hitherto made in regard to the admission duty free of single copies of such publications received from export houses for the use of merchants, that on and after September 1 next such conecession will cease, and the aforesaid duty of 3d. per pound on single copies of catalogues and price lists sent through the post will be levied, by means of a postal surcharge, which will be collected by the postal officials before delivery of the packet to the addressee."

SOUTHWESTERN ENTERPRISE.

A Southwestern correspondent gives some figures interesting on development along the Southern Pacific lines for the five months alone, preceding May 30 last.

Investments in new rice mills in addition to old plants, etc., $5,872,000.

Investments in building new canals and improving old ones, etc., $539,450

Investments in saw mills, improvements, tram lines. etc., $1,003,000.

Miscellaneous, including pottery plants, piano factories, oil mills, banks, bank buildings, mills for oil bran etc., $563,924.

The correspondent expresses the belief that this list contains only about 50 per cent of the real industrial improvements that have actually been made in that section during the period mentioned.

A REMARKABLE CLOCK.

For the last 250 years peons and presidents, Indians and emperors have set their watches, if they had them, by the old town clock of Tlalpam, Mex. For 130 years it looked down on the great City of Mexico from the cathedral tower, and for the last 120 years the town of Tlalpam has taken its time from the old clock. This remarkable timepiece was set up in the cathedral in 1657. In 1790 it was removed to the town hall of Tlalpam, where it has been running since. Some months ago signs of senile degeneration were observed, and although various repairs were made the poor old clock refused to keep going. The clock will probably be sent to one of the museums of the City of Mexico, where there can be seen the oldest clock with the longest continuous record in the Americas.

HARDWARE

VOL. XXVIII. SEPTEMBER 10, 1904. NO. 11.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is $1.00 a year, payable in advance.

Remittances should always be made by New York Draft, Post-office or Express Money Order.

Foreign Subscriptions.—For each copy to be mailed outside the United States the Canadas, and Mexico, the price is $2.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Change of Address.—Always give both your old and new address when you ask us to change your address.

The Name of your Post-office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

With the passing of Labor Day, the final vacations may be said to have ended, and the last of the boys will have said good-bye to the annual outing and returned to his desk refreshed and recuperated for his employment, and anxious for the results of the season's business in which he becomes a factor.

The recent reduction in the price of nails does not, to any noticeable extent increase the business by stimulating sales and making larger purchases, and we are pleased to report the trade generally understand the motive was to cut the ground from under the competitor, and that it does not serve as a forerunner of numerous changes in prices, unsettling the market, creating a feeling of uncertainty and otherwise limiting the demand for goods. The trade has not been subjected to any discomfort from the change.

Retailers stocks are light throughout the country, and the merchants are pursuing a conservative course thus early in the season. The weather has been fine and buyers should have their views of a more sanguine character, but they only look at the possibilities of the present, buy in a hand to mouth manner, and acting on their best judgment in a presidential year, which has a more or less feeling of uncertainty guiding its movements, they prefer waiting until the country renders its decision before purchasing the bulk of its supplies.

At this season, state and county fairs are the popular methods to ascertain the wants of the community in regard to their supplies. When the new prices possible to be made on fence wire and wire nails are announced, they will be productive of a more general inquiry in these lines.

As the harvest advances, all kinds of reports are heard regarding the condition of the crops. In regard to the wheat crops, it is felt there will be a great average loss, noticeably in some sections more than others. It is not general, only affecting some localities, while in others it is up to a condition that promises well. The corn crop will be an abundant one, and from the additional territory cultivated, cannot do otherwise than well. The cotton crop with increased acreage under cultivation is showing a fine condition, which at present prices will do its share toward a prosperous condition of the country.

EXPORTS OF MANUFACTURES LARGEST IN OUR HISTORY.

The fact that the exports of manufactures from the United States in the fiscal year just ended were the largest in the history of our commerce, and that during the last three months they have actually exceeded the value of agricultural products exported, lends interest to some figures just compiled by the Department of Commerce and Labor through its Bureau of Statistics, showing the growth in the exports of principal manufactured articles from 1870 to 1904, and the increase in importations of materials for use in manufacturing during the same period.

The statement divides the manufactures into ten great groups, which form, it says, about 80 per cent. of the total value of the manufactures exported. These ten groups are iron and steel, mineral oils, copper, agricultural implements, wood manufactures; chemicals, drugs and dyes, leather and manufactures thereof, cotton manufactures, paraffin, and paper and manufactures thereof. Iron and steel shows the largest total being in round terms 112 million dollars; mineral oils, 72 millions; copper, 57 millions; leather, 34 millions; agricultural implements, 23 millions; chemicals, 13 millions; wood manufactures, nearly 13 millions; paraffin, over 8 millions, and paper, over 7 million dollars.

Iron and steel and copper show the most remarkable growth during the period of thirty-four years, the growth in iron and steel having been from 13 million dollars in 1870 to $111,948,586 in 1904; and copper, from a half million dollars in 1870 to 57 millions in 1904. Mineral oils increased from 30 millions to 72 millions during the same period; leather, from less than 1 million to over 33 millions; cotton manufactures, from less than 4 millions to 22 millions; agricultural implements, from 1 million to over 22 millions.

These 10 articles or groups of articles form about 80 per cent. of the total manufactures exported. In 1870 their total amounted to less than 60 million dollars, and in 1904 amounted to about 363 millions. Copper shows a remarkable growth, especially during the last decade. From 1870 to 1893 the exportations of copper were small, seldom exceeding 5 million dollars. In 1894, however, there was an increase to practically 20 million dollars; by 1898 the total exceeded 30 millions; by 1900 it was over 50 millions, and in the fiscal year 1904 was over 57 million dollars, as compared with $504,741 in 1870. Leather manufactures also show a marked gain, having been but $673,331 in 1870, and $33,980,615 in 1904.

Equally interesting with the growth in exportation of manufactures is the growth in importation of foreign material required for use in manufacturing. Curiously, manufacturers' materials imported in 1904 are almost identical in value with finished manufactures exported. The raw materials imported for use in manufacturing in 1904 amounted to 321 million dollars, and the partially manufactured materials for use in manufacturing amounted to 136 million dollars, making a total of 457 millions of manufacturers' materials imported, as against 452 million dollars' worth of finished manufactures exported. These manufacturers' materials include raw silk, fibers, india rubber, hides and skins, furs and fur skins; chemicals, drugs and dyes, wool, cotton, wood, tin and iron and steel, and sundry other articles in a partially manufactured state.

A table showing the ten groups of manufacturers' materials, which form about 90 per cent. of the raw material imported for use in manufacturing, is published by the Bureau of Statistics. It shows that the importations of fibers have increased from 6 million dollars in 1870 to 38 millions in 1904; silk, from 3 millions to 46 millions; india rubber, from 3½ millions to 42 millions; hides, from 14 millions to 52 millions; chemicals, from 20½ millions to 65 millions; wool, from 6½ millions to 24½ millions; cot-

Digitized by Google

ton, from less than a half million dollars in value to over 9 millions; wood, from a little over a half million dollars to over 20 million dollars, and tin, from less than 2 millions to over 21 millions of dollars in the period from 1870 to 1904.

The following shows the value of the ten principal groups of manufactures exported in 1870, 1890 and 1904:

Exports of principal manufactures, 1870, 1890 *and* 1904.

Articles.	1870.	1890.	1904.
Iron and steel	$13,483,163	$25,542,208	$111,948,586
Mineral oils	30,431,668	44,658,854	72,487,415
Copper	504,741	2,349,392	57,142,079
Leather and manufactures	673,331	12,438,847	33,980,615
Agricultural implements	1,068,476	3,859,184	22,749,635
Cotton manufactures	3,787,282	9,997,277	22,403,713
Chemicals, etc.	2,663,887	5,424,279	13,355,694
Wood manufactures	2,613,715	6,509,645	12,981,112
Paraffin	374	2,408,709	8,859,964
Paper and manufactures	519,694	1,226,686	7,543,728

The following shows the value of the ten principal groups of manufacturers' raw materials imported in 1870, 1890, and 1904:

Imports of manufacturers' raw materials, 1870, 1890, *and* 1904.

Articles.	1870.	1890.	1904.
Fibers, unmanufactured	$6,043,102	$20,541,767	$37,814,285
Silk, raw	3,017,958	24,331,867	46,100,500
India rubber and gutta-percha	3,459,665	14,854,512	42,214,219
Hides and skins	14,402,339	21,881,886	52,006,070

Wool, raw	6,743,350	15,264,083	24,813,591
Cotton, raw	331,573	1,392,728	9,387,331
Wood, unmanufactured	670,131	13,518,310	20,490,058
Tin in bars, blocks, etc.	1,984,238	6,898,909	21,486,311

PUNCTUALITY IN BUSINESS.

Given equal capital, equal location and equal ability, the punctual man is the one who will succeed, where his easy-going, careless competitor will fail. Punctuality may be considered only a negative virtue, neverthless its lack leads to many a disappointment and many a loss, and, what is of more far-reaching importance, to distrust and lack of confidence which is fatal to all future business.

No matter what the weather or the feelings of the business man may be, his store should be open at the established time, as regularly as the ebb and flow of the tides. Then nobody in a hurry will have to go away disappointed at locked doors. No matter how trivial the business engagement may appear, be on the spot at the appointed time. A customer satisfied over a small purchase to-day, or over any little business engagement met and carried out as agreed, may eventually mean a trade of hundreds or thousands of dollars. Be punctual in waiting on customers or in answering inquiries. Never keep a customer waiting, even if you are the only one he can trade with in your town.

Punctuality in collecting accounts is another important secret of success in business—as important as punctuality in making sales. Laxness in making collections is sure to breed laxness in paying on the part of your customers; which, as you will admit, is a bad habit. But if you are not on the spot at the time appointed for payment, how can you expect your debtor to retain his respect for you as a business man? Business is business, and while the "pound of flesh" rule is not at all necessary in modern business, a close, practical, up-to-date, systematic method of making collections is absolutely necessary, and promptness is one of its prime factors.

Then, punctuality in the payment of your own bills is just as essential as punctuality in making collections. It is absolutely necessary in establishing and maintaining your own credit. It is much more important than large capital, and will stand you in better stead. The man with moderate capital who not only pays his debts but pays them promptly, stands to win out in the race for business success far better than the man with practically unlimited capital who is careless in meeting his obligations. This is true for a double reason. It gives him a better rating and credit, and it also tends to fix in him habits of punctuality and business forethought and acumen which are bound to make him a better and bigger man in a business way.

♣

It has been the joke of ages and is the joke to-day that lawyers and newspapers are great liars. In point of fact the lawyers and the newspaper men of the day are doing as much, at least, as people in other professions or trades in searching for facts and in making them public, and in so doing they are doing their part toward uprooting error and toward purifying the moral atmosphere.

FAR NORTHWESTERN TRADE.

(From our Regular Correspondent)

General business conditions in the far Northwest are exceedingly good. Mining is much more active in Montana than it was a year ago, and all the big smelters are being operated with double shifts, running day and night at full capacity. No small number of new properties are being developed, and a large amount of mineral is being brought into the market. Farm products are bringing good prices, and crops in Washington and Oregon are large. The only large interest that is now somewhat slow is lumbering—during the past three years the lumber business has been overdeveloped and now a little reaction has come.

In speaking of local Hardware trade in Butte, Mont., Mr. Henderson, of Henderson Bros. & Co., said: "Our business is constantly growing, and the building up of the farming interests here in Central Montana is certainly helping the business of Butte." Henderson Bros. & Co. have a large retail Hardware store, and handle a number of side lines, including stoves and ranges, crockery and glassware and sporting goods.

Another of Butte's finest stores is that of the Montana Hardware Co. The store is large, light and splendidly arranged. F. F. West, who for many years traveled this Western country and knows Hardware from A to Z, is the genial general manager. The business is wholesale as well as retail, and an extensive trade is carried on in Heavy Hardware and mining supplies. Sporting goods were added to the business two years ago, and this line is successfully looked after by Marvin Jenkins, one of the best posted sporting goods men in the State.

Very attractive window displays and catchy advertising is a feature of the Hardware store of Davis & Wiemscary Co., which concern cater to the very best trade. A large line of fine cut glass is carried, and this, as well as all crockery and glassware, is found to be a strong line to sell in connection with staple Hardware. This concern reported the business outlook as very satisfactory.

The Hardware store of the Anaconda Copper Mining Co. is large and well stocked. S. H. Greenwood, who is one of the best posted general Hardware men of the West, is manager, and is backed up by H. U. Doering, who looks after the trade in and about Butte.

The dry goods and department stores out here are finding that Hardware is not a profitable line. One reason perhaps is from the fact that, because of the higher wages and larger expenses of doing business than in the East, these stores are unable to sell the goods at any less price than do the regular Hardware merchants—and few people will go to a dry goods store for Hardware or a lawn mower or even house furnishing goods, unless they can see considerable saving in the prices. And here in Butte, where the unions control the labor market—and insist that the lowest wages be $60 a month, and the second year $80, whether male or female—it's not possible to make the low prices that the Eastern stores do on Hardware specialties.

The Anaconda Hardware men are in a better mood than a year ago Now the big smelter is in full operation, with a monthly pay roll of upwards of a quarter million of dollars, and business is good.

Mr. Coy, of Leck & Coy, who are one of the leading firms of the city, said that all branches of the business had been good this year, except bicycles. "The bicycle business has come down to a small thing now," continued Mr. Coy. "We don't sell as many wheels now the entire season as we did a few years ago in one week. But other branches are better—more general sporting goods is being sold—more farming tools and the crockery trade is better." Leck & Coy carry an attractive line of imported dolls, and at the holiday season do a large business. These goods are not often found in a Hardware store, but displayed together with cut glass and china make an attractive line, and Mr. Coy says a profitable one.

J. B. Stagg, of Anaconda, has a large store and conducts in connection with the Hardware business an up-to-date tin shop.

One notices less racket and bazaar stores in these Western towns than in former years. A few years ago this class of stores were making quite a bid for some lines of the Hardware business, but now have gradually dropped out of the line. One Hardwareman explained it in this way: "All the Hardware, tin shop and plumbers' supply dealers in our city got together a few years ago, and let the jobbers know that we positively would not buy from any concern selling this class of trade. We went still further—we clubbed our orders and placed large contracts for the cheap trash these racket stores were selling, buying at prices they could not get. We put in racket store bargain counters, and let the people have this cheap stuff at almost cost price. It worked like a charm. The jobbers wanted the Hardware merchants' trade, and therefore turned down the racket

Digitized by Google

stores. The cheap plunder we put out brought us this cheap trade, and now the racket stores are a thing of the past as regards the Hardware line." It would seem possible to meet the unfair catalogue house competition in much the same way.

In Helena, Mont., the A. M. Holter Hardware Co. are gradually enlarging their jobbing business and now are working the trade of Central Montana in a very thorough manner. The success of this and other local jobbing houses, proves to a conclusion that no matter what happens to the big jobber in the changes that future years will bring in methods of marketing goods, there always will be a place and plenty of business for the local jobbing Hardware house. The Holter Hardware Co. have a well arranged, large double retail Hardware store. There is one remarkable feature about this concern. Everyone in the place seems to be in a happy mood, from the elevator boy up, there is a happy expression on everyone's face, that wins many friends and good customers for the house. F. C. Ashall, who is the buyer and assistant general manager, impresses salesmen the same way—and, as one drummer put it, "If there are any inside prices from our concern, Ashall is going to have them."

The Helena Hardware Co. recently moved and are now devoting their attention more to the wholesale business.

Spokane, Wash., is growing rapidly, and as years go on is becoming more and more of a wholesale center. This is no less true of Hardware than other lines. The building up of the country both East and West as well as North from Spokane, is making the city the natural center. The Hardware houses here are finding that they can successfully compete with the coast jobbers, and when it comes to getting goods quickly to their customers the Spokane jobbers have the Eastern concerns stopped to a finish.

The growth of the Spokane jobbers is well illustrated by the Jensen-King-Byrd Co., who will soon move into a new and larger building, being erected especially for them. The new building will give the concern about three times the present floor space, and will enable them to carry a larger stock, and by having arrangements of the building as the business requires, will put the Jensen, King, Byrd Co. in position to take still better care of their large growing jobbing trade. In referring to business conditions, O. C. Jensen said: "The trade is settling down to a more steady and better basis. The big ranches are being cut up into smaller farms, and these farmers are raising a larger variety of crops; all of which is better for general business. A good deal of business is being done in building materials." This concern are rapidly getting a large share of the sporting goods business of Spokane, having put in an up-to-date stock in charge of W. E. Henry, who is the most popular sportsman in Spokane.

An exclusively retail trade is carried on by the Millis, Price Hardware Co. A large line of stoves is handled by this concern, business has been good, so Mr. Millis said.

McGowen Bros. have just completed three new warehouses, in which is carried their wholesale stock and heavy goods. This is a three-story building of heavy iron and stone construction, and being situated on a siding of the Northern Pacific R.R., enables McGowen Bros. to handle all classes of goods at the lowest possible expense, and in this way the firm are well able to compete for the wholesale trade. A. C. Tyler, who took his turn on the road and demonstrated the possibilities in the jobbing trade, is now inside man, at the head of the purchasing department.

Another of Spokane's well arranged retail stores is that of Holley, Mason, Marks & Co., who also do a good jobbing business and are now working on a new up-to-date general Hardware catalogue.

The Spokane Hardware Co. occupy a large store and make a specialty of Builders' Hardware and tools.

There are few cities where the Hardware stores are better stocked or as a whole, make as good showing as here in Spokane. The same forces that worked in the years past and built up the jobbing concerns of the Middle West are now being seen out here—the success of the jobbers there in the past is a sure indication of the success for the jobbers here in the future.

HAMMERNAIL.

THE COMING CONVENTIONS.

It is announced that for the convention to be held at Atlantic City, November 16, 17 and 18, the headquarters of the National Hardware Association will be at the Hotel Rudolph, while the members of the American Hardware Manufacturers' Association will hold forth at the St. Charles. Secretaries Fernley and Mitchell are now receiving reservations for rooms from the members of their respective organizations. It is expected that the sessions of the November convention will be especially interesting, in view of the good work that has been done during the summer by the various committees.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

Liability of Landlord to Tenant for Injuries Caused by Falling Ceiling.

QUESTION: I hired a flat by the month in January of this year in the city of New York. In February I discovered that the ceiling was loose and likely to fall. I warned the landlord repeatedly to fix it and he promised to have repairs made several times. A short time ago it fell, injuring my daughter very severely. The landlord refused to pay me anything. Advise me as to my legal rights?

REPLY: It is well settled in New York that no duty rests upon the landlord to repair premises which he has leased and there can be no obligation to repair except as created by the agreement of the landlord. If the landlord agrees to repair the premises and does not do so, it is the duty of the tenant to do the work himself at the landlord's expense, or if the premises are untenantable he may move out. The tenant has no right to let the premises remain in an unsafe condition, and stay there at the risk of receiving injury on account of their defective condition, and then recover from the landlord for such injuries. If the tenant chooses to stay in a room, the ceiling of which he knows is unsafe and likely to fall, he does so at his own risk and any injuries which he suffers on that account the law attributes to his own carelessness. You cannot recover from the landlord.

A Suit the Only Redress.

QUESTION: I am the producer of a small article that in my opinion has so much merit that I am perfectly willing to submit it to a possible purchaser without payment in advance. To this end I have prepared and sent out a letter making the proposition above referred to, and inclosing a blank by which the signer agrees either to send the money or return the article within a certain stipulated time. I have sent out a great many of these articles and a few have been retained by the signers of the blanks and no further communication has been received from them. I have written some three or four letters to every one, calling their attention to their previous agreement, and in the cases referred to have had no reply. Will you kindly tell me what is my remedy? The article is of small value, never amounting to more than a couple of dollars.

REPLY: Your only redress is to sue the parties who have retained your goods for the price which they agreed to pay you for them.

Agency Revoked by Death.

QUESTION: A man in Pennsylvania had a mortgage on my farm. He was accustomed to collect the interest on the mortgage through a local attorney. On January 1st I made semi-annual payment of interest to the attorney as usual. Since that time he has moved away and I am unable to trace his whereabouts. I have just received a letter from the executor of the mortgagee stating that the mortgagee died in December of last year, which I did not before know, and that his estate has not received the January installment of interest and threatening foreclosure unless it is paid at once. Must I pay the interest a second time?

REPLY: We are compelled to answer your question in the affirmative. It is a universal principle that agency is always revoked by the death of the principal. Consequently, if the mortgage died in December, the attorney was not authorized to receive the January payment and you made the payment to him at your own risk. It is immaterial whether or not you knew of the death of the mortgage at the time the payment was made. The law presumes that death is notice to the world of the revocation of any agency. Hence, though you did not know the mortgagee was dead, and made the payment exactly as you had been accustomed to do, you were not protected in so doing, in case of a misappropriation of the proceeds by the agent. Of course, you can institute civil and criminal proceedings against the attorney, if you find him.

CHARLES SARGENT, WHO FIRST APPLIED CHAIN PRINCIPLE TO BICYCLES, DIES IN POVERTY.

Charles Sargent, inventor of the chain principle as applied to bicycles, has died in Paris, aged eighty-three years. Despite his numerous inventions in improvements of the steering gear of bicycles and automobiles, which should have brought a fortune, Sargent ended his life in extreme poverty. His inventions comprised the tandem bicycle, a folding invalid chair, a mechanical merry-go-round and many ingenious appliances.

RECENT TRADE PUBLICATIONS.

F. E. KOHLER & Co., Canton, Ohio, manufacturers of Hardware Specialties, under date of September first, have issued an attractive catalogue of their goods, including Anti-Rattlers, Post Hole Diggers, Steel Door Pulls, Garden Hose, Lawn Sprinklers and Rakes, Sawsets, Sidewalk Scrapers, Furnace Scoops, Snow Shovels, Garden Trowels, etc., etc. The above firm were established in 1879 and since that time for twenty-five years have continuously made Hardware Specialties. They make a specialty of their Little Giant Post Hole Digger which is a tool of rare merit, combining a post hole digger, transplanter, spade, pick and tamping bar. The most popular post hole digger on the market to-day, they claim, is their Hercules. The handles of these rest on the castings, thus relieving the strain on the bolts. Blades are of the best cast steel, properly tempered, and the irons the best malleable iron. "The neatest and strongest rake on earth" is their claim for their Improved Lawn Queen Rake. It is reversible and can be used for grass or leaves. Regarding their wood handle steel Garden Trowel, they claim not only attractiveness in appearance, but that it is practically indestructible, and free from all the defects found in other wood handle trowels. Their numerous other specialties are described and illustrated in their catalogue which would be gladly sent upon application.

BARNEY & BERRY, Springfield, Mass., are the authors of an interesting and valuable envelope size pamphlet catalogue containing 50 pages, devoted to the exploitation of their Ice Skates, which are for sale at wholesale by principal jobbers of Hardware and sporting goods throughout the United States, and at retail upon the counters of Hardware, sporting goods and toy stores generally. The cover of the book is an attractive one, the picture representing a hockey game in progress. They illustrate 34 different styles of Ice Skates, also an Ankle Support Skate, which is a practical help to skaters having weak ankles. It is simple and light, yet strong and effective, and is made on scientific principles. The book also gives directions for constructing an inexpensive skating pond, also rules for playing the game of hockey which govern the game in the principal leagues of this country and Canada.

EUGENE E. NICE, Philadelphia, Pa., has recently distributed his second edition catalogue of "Nice" Liquid and Paste Fillers and "Nice" Varnishes and Finishes. The cover of the pamphlet, which is envelope size, is of paper, but made to represent birch wood, and makes a very unique appearance. "Nice" Interior and Exterior Varnishes and Finishes enjoy an enviable reputation. In their manufacture they use only the best raw materials obtainable. All gums and other ingredients are carefully inspected and sorted and combined by the most accurate methods. All this, with proper ageing, insures a product unsurpassed for uniformity and durability. A few "don'ts" for varnish users are given which, if faithfully followed, will insure successful results. The book contains a great deal of information on this particular subject, and will be found of value. Another product from this office is their catalogue "C," a larger one than the above, and devoted to their Varnishes and Paints. They believe that the best in paints and varnishes, as in other lines, is always the cheapest. Following that idea, they state they are flattered by the widespread confidence which their methods and systems have engendered. Their line covers all grades and all prices, but in each they have made quality their consideration, thus, even their cheapest goods are dependable, reliable goods, receiving the same care and attention as do the better ones. A large surplus stock always carried in their warehouse enables them to make prompt shipment one of their strong points.

THE AMERICAN STEEL & WIRE Co., Chicago, Ill., have sent us a copy of their folder, which exploits their Steel and Copper Wire on spools. It is neatly arranged and illustrates the single spool and a box of one dozen spools. Also is given list prices on bright, annealed, tin-plated and hair Steel Wire and Copper Wire. All sizes are packed one dozen spools in a box. Copper Wire numbers 16 to 26 put up on ¼, ½ and 1-pound spools to order.

THE CLYDE CUTLERY Co., successors to the Hunter Tool Co., Clyde, Ohio, and 7-9 Warren Street, New York City, have recently issued their catalogue No. 11, exploiting their extensive line of Knives. The above business was established in 1850 by Chester Hunter, one of the finest steel workers in the world. His methods, modified from time to time in accordance with the most approved shop practice, are followed by them to-day, and as a result, they state, their products are unequalled. They guarantee to give two knives for every defective knife returned to them, and that every knife, when it leaves their factory, will be sharp. They illustrate their Clyde or Hunter Improved Draw Cut Pruning Shear, which they claim is the only pruning shear that has a positive draw or sliding cut and solid tool steel hook and blade, and a bolt with lock-nut. This is furnished regularly with shellacked handles, also furnished with painted handles when specified.

THE HOPKINS & ALLEN ARMS Co., Norwich, Conn., have sent us two very attractive envelope size pamphlet catalogues, one describing and illustrating as well as it is possible in so small a space, three very popular styles of Rifles. These goods are all of first-class workmanship throughout and each article is carefully inspected and tested before shipping. Their special system of rifling, they claim, insures better and more accurate shooting qualities than any rifle made at a similar price. They guarantee the quality of all their goods and they assure the purchaser that no better rifle can be obtained anywhere for the money. Their new factory is one of the largest and best equipped firearms plants in the world. The other pamphlet presents illustrations and brief descriptions of their well-known line of Single Barrel Shotguns, together with some new models which they are now introducing. These goods are all of first-class construction, workmanship and finish, each article being tested before shipping.

THE O'NEIL ELEVATOR COMPANY, 628 Cherry Street, Philadelphia, have issued a neat envelope size pamphlet catalogue of 13 pages, relative to their Elevators and Dumb Waiters. This concern makes a specialty of these goods, including all attachments and appliances for same; consequently, by confining themselves to the manufacture of this line exclusively, and having had many years experience in the construction of this class of machinery, they are enabled to produce the best, they claim, at the very lowest price. They guarantee against defective workmanship and material. "All orders filled at shortest notice" is their boast. They illustrate in their catalogue their No. 1 Side Post Hand Power Elevator; No. 2 Back Guide Elevator for use where it is objectionable to have posts standing out in the hallway or store; No. 3, Hand Power Carriage Elevator, and No. 4, Sheave Dumb Waiter, which is quick, free running and noiseless and adapted for restaurants and private dining rooms, and will carry a load up to fifty pounds. Send for one of their catalogues for further information.

THE PIQUA BRACKET Co., Piqua, Ohio, manufacturers of Baines' Patented Shelf Brackets, have recently printed for distribution among the trade, a very handsome pamphlet catalogue of 24 pages. Baines' Improved Brackets, adjustable and fixed, or stationary, form a new and complete system of shelving that is adapted to all kinds of business, and to every position wherever a shelf or shelves are needed in store rooms or dwellings. This improved system has many and great advantages over old methods, some of which are: The shelves are free from obstructions and props among, or in front of the goods, forming a clear, continuous line the entire length of the shelf section, just what is needed for the proper arrangement and best display of Hardware, dry goods, clothing, boot and shoe boxes, etc. A specialty made by this company is the Gem Shoe Holder and Shiner, which may be attached to side wall at a suitable height, allowing an erect position and the use of both hands, resulting in better shines. It is handsomely finished in polished nickel, and has no complicated parts to get out of order, and may be turned against the wall when not in use. It is extremely simple in operation, all that is necessary being to attach proper form, adjust the shoe, turn crank back tight, and the Shiner is ready for business. The forms provided are adapted for the shoes of the entire family, and will shape the shoe properly and hold it firmly. The advertising literature issued by the above company will be found of interest to those using brackets, or shelving of any kind.

NEW GOODS AND SPECIALTIES.

THE MULTI-SHADE HANGER.

We illustrate herewith (Fig. 1) the Multi-Shade Hanger, manufactured by the Multi-Shade Hanger Co., Elmira, N. Y. Two of these are used at each window and each pair of hangers suspends two shades and one curtain pole. The bracket fits flat against the surface of the window casing and the little spurs are easily

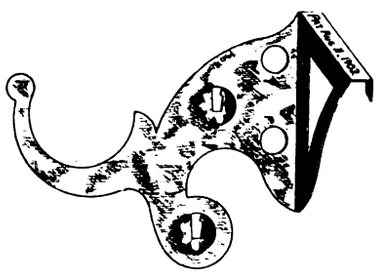

FIG. 1.

driven into the top of the casing by a couple of blows of the hammer. It is easily and quickly done without marring the woodwork and without the use of screws or nails. The hanger is ornamental, nicely finished, holds any shade, and its makers claim that it never gets out of order.

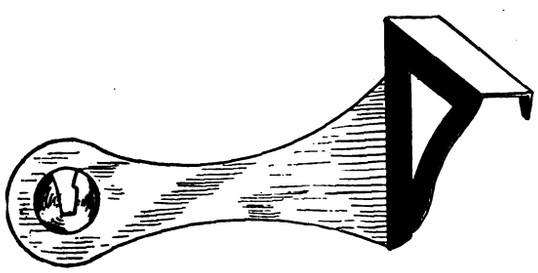

FIG. 2.

Fig. 2 shows the bracket designed to be fastened to the top sash, so the window can be lowered for the purpose of ventilation; allowing the shade to be adjusted so the room is not exposed to

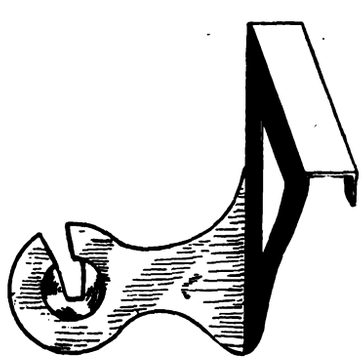

FIG. 3.

view, yet permitting the air to circulate freely without disturbing the curtain.

Fig. 3 is a cut of the bracket designed to support a single shade, and is fastened to the top of the casing in the same manner as the combination bracket.

THE ELASTIC TIP SPECIALTIES.

The Elastic Tip Company, Boston, are manufacturing an extensive line of very handy rubber specialties, which should prove an easy selling addition to any Hardware man's stock. One of their best selling lines is the Patent Elastic Steam Tip, figure 1 and 2, which is made of soft rubber for insertion in the end of a chair leg so that the chair itself never comes in contact with the floor after the tip is put on. Where tiled floors are used a

FIG. 1.

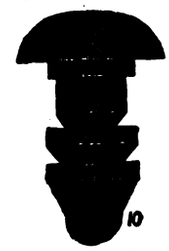

FIG. 2.

FIG. 3.

metal cap (Fig. 3) is used, which covers the rubber and allows the chair to be drawn over the floor easily. The Rocker Tips (Fig. 4) for attaching to the end of rockers, preventing their marking

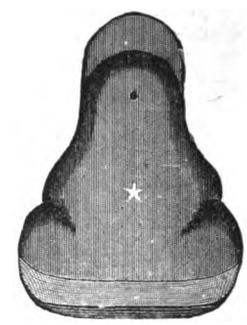

FIG. 4.

mop-boards has also proved an easy seller. The Screw Tips, Fig. 5 and 6, are so made that in case the rubber wears down, the screw being countersunk into a brass disc, can do no harm. This

FIG. 5.

FIG. 6.

brass disc also makes it impossible for the rubber head to be pulled off. A line of Rubber Head Nails (Figs. 7 and 8) are also made by this firm. In these goods a brass-headed nail is used

FIG. 7.

FIG. 8.

as it has been found that rubber adheres to brass better, it being impossible to vulcanize it to iron without special treatment.

BLACK SATIN POLISH.

Since the time when stoves were first used the task of keeping them clean and well polished has been one of the most disagreeable duties of the housewife; the reason, therefore, for the success of Black Satin Stove Polish is obvious. The Black Satin Stove Polish Co., 107 Chambers Street, New York, claim for Black Satin Polish that it will not burn red, that it is always ready for use, that it is made of the best materials and will not dry or spoil with age, and that it is the only unburnable, non-explosive polish on the market. It is claimed further that Black Satin Polish prevents rust and that after being polished with it a stove can be washed clean with water, and further, that it polishes the nickel parts of the stove, and the stove pipes and sheet iron stoves as well. The polish retails at 25 cents per can and is shipped to the dealer one to four dozen cans in a case, weight 12 to 45 pounds.

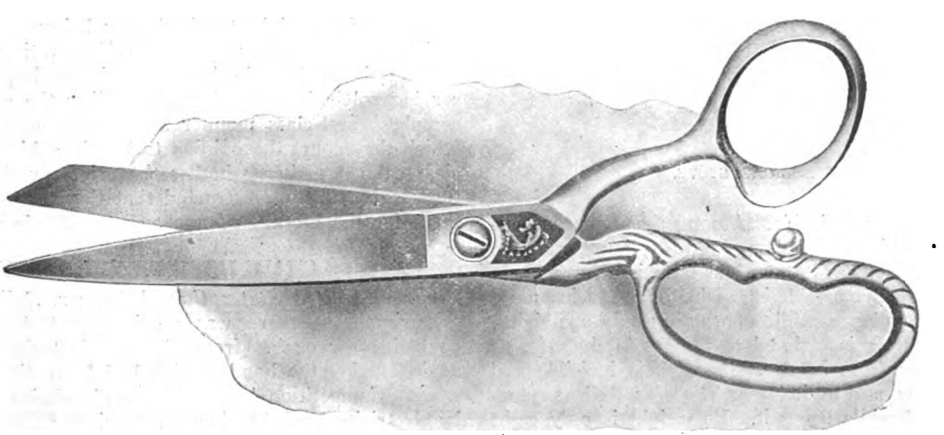
THE "VILLAGE BLACKSMITH" LINE.

The excellent line of Knives and Tools bearing the brand "Village Blacksmith" that are being placed on the market by the Washington Cutlery Company, Milwaukee, Wis., are all made by that slow, but sure, method, hand work. The manufacturers

THE "VILLAGE BLACKSMITH" BUTCHER KNIFE.

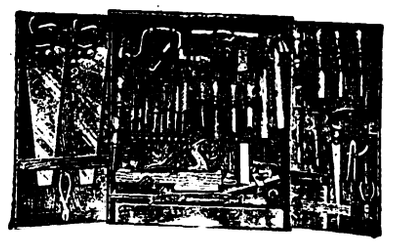


claim that in adhering to this method of turning out their goods they are able to produce cutlery of a much higher standard of quality and greater selling and wearing power than can be produced when machine work is used. Starting with the bar of steel at the anvil, all through the many processes, to packing for shipment, the work is done entirely by expert workmen, and passing as it does under the close inspection of so many watchful eyes, it would seem impossible for a tool to reach the shipping room with a single flaw. We illustrate herewith one of this firm's butcher knives, also their method of boxing knives. Their handsome booklet with discounts to the trade will be mailed on application.

MODE OF BOXING.

FERROID SHEARS.

The Ferroid Shear, new in design and having some excellent points of advantage, has been placed on the market by the Bridgeport Hardware Mfg. Co., Bridgeport, Conn. One of the features

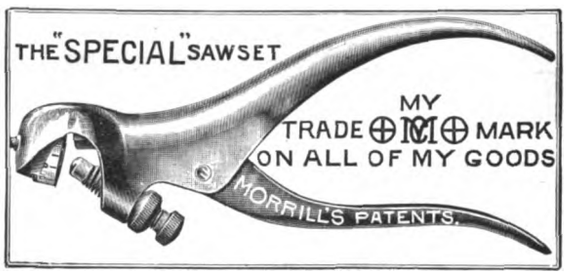


THE FERROID SHEARS.

of the shear is the broad rest for the thumb on the small bow, making its use very comfortable. Its manufacturers claim that this shear, which we illustrate herewith, is made of a special metal by a special process controlled by this firm, and that the cutting edges, which can be sharpened on an emery stone or wheel, are carefully tempered, insuring a clean cutting surface. The shear is finished in heavy nickel plate and put up half-dozen in a package, each shear in an anti-rust paper pocket.

EUREKA TOOL CABINETS.

The American Tool Chest Company, 200 West Houston Street, New York City, have added to their assortment a line of tool cabinets under the name of the Eureka Tool Cabinet No. 1, 2 and 3. The first two cabinets being identical in size, but with a third more tools in the No. 2. The No. 3 is larger than either of the others and contains nearly twice as many tools as the No. 1. The cabinets are made of chestnut, finished natural, with a brass lifting handle on each of the two sides. Cabinets Nos. 1 and 2 are 27 inches high, 20 inches wide and 8 inches deep, No. 1 containing 36 tools and No. 2, 48 tools. The No. 3 cabinet is 31x25x8 inches, outside dimensions, with two bottom drawers, instead of one, and contains 60 tools. The cabinets, supplied as they are with tools that are high grade only, are suitable for professional use, although intended to be only such tools as a gentleman would naturally select.

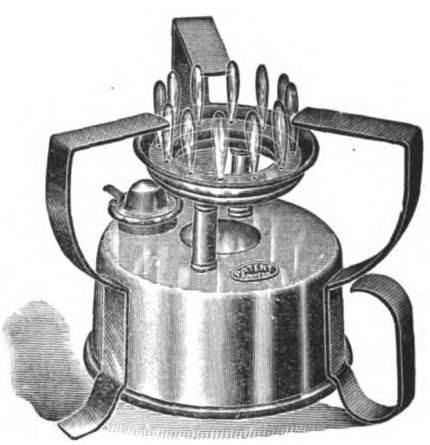


EUREKA TOOL CABINET.

A NEW SAWSET.

Morrills' Sawsets have been favorably known to the mechanic for over twenty-five years, but it has remained for the manufacturer, Charles Morrill, 277 Broadway, New York, to score their latest success in their new model, the "Special." In this sawset is combined the advantages of his No. 1 and No. 95 Sawsets with none of the disadvantages of either, and in addition possessing many advantages distinctively its own. By the aid of this sawset, the art of setting a saw has become an exact science, and there is no longer any excuse for a carpenter or woodworker to have a badly set saw. The anvil is beveled to give the proper set to any

Digitized by Google

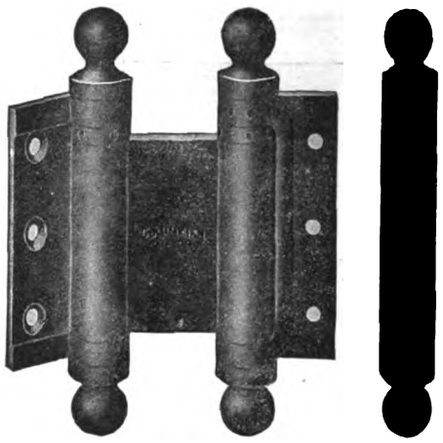


hand saw, and all the carpenter has to do is to read off from the body of his saw the number of teeth to the inch it has, set the anvil on the sawset to the corresponding number, then run the gauge screw up until the body passes through without binding.

Then by going down one side of his saw, and setting the alternate over, then reversing the saw, and setting the remaining teeth the other way a perfectly set saw is produced, one that will do the finest work and run the easiest. In this sawset the gauge screw is provided with a lock-nut to keep it from turning, the handle is on the bottom and the set is dust and dirt proof, the anvil is set on an incline, allowing the operator to see the set he is giving the saw, and also permitting the plunger to be made stronger. Although this set has only been out since January 1st, it has met with an unprecedented welcome. It is needless to add that Chas. Morrill is still making the other sets of his line, No. 1-10-11-95 for hand sawsets, Nos.3 and 4 for cross-cut sawsets and No. 5 for circular saws, as well as the Bench Stops No. 1 and No. 2, so well and favorably known to the trade at large. Mr. Morrill has recently brought out a booklet entitled "Morals Up-to-Date" which contains details concerning his line, and which he informs us he will be glad to mail to any address upon application.

GLOGAU'S ALCOHOL-GAS STOVE.

Glogau & Co., 21 Quincy Street, Chicago, Ill., are placing upon the market, through the Hardware and Housefurnishing Goods trade, a very compact and useful article under the name of Glogau's Alcohol-Gas Stove, an illustration of which we give herewith. The stove is admirably adapted for the use of travelers, sick rooms, camps, chafing dishes or light housekeeping, or where-



GLOGAU'S ALCOHOL-GAS STOVE.

ever gas is not available or desirable. Among the numerous advantages claimed for this useful household appliance may be mentioned that it manufactures its own gas, and is always ready for use, and while extremely portable is capable of producing more heat than any similar appliance, while consuming only one-eighth the amount of alcohol. It is claimed to be absolutely safe, as explosions cannot occur from its use. Its wick is invisible and never requires renewing, and as it is smokeless as well as odorless, no soot is formed while using it. Its weight is only eight ounces, and it will burn as steadily as a regular gas stove. It is so constructed that it may be upset without spilling the alcohol. The little flames noticeable in the illustration are readily extinguished, requiring no special instrument, but can be blown out like a candle. It is capable of boiling a quart of water in twelve minutes. As it has a reservoir that will hold seven ounces of alcohol, it does away with the labor of frequently refilling. Either wood or grain alcohol can be used in it. Altogether it is a very useful little article, and can be readily sold by the Hardware trade. The New York office of the above company is at 204 East 14th Street.

THE COLUMBIAN SPRING HINGES.

The Columbian Hardware Co., Cleveland, Ohio, are the manufacturers of the Columbian Spring Hinges, herewith illustrated, which is made in sheet steel, bronze and brass. The center flange is seamless, and the manner in which the side flanges are reinforced is referred to as giving it solidity. The hinges have special steel bearings in every joint, and the carpenters gauge is of assistance in placing the hinges in position readily. The springs are alluded to as being of extraordinary length, and has not only increased the capacity but also contributing to the life of the hinge. The hinges are made both single and double acting, and in all the finishes demanded by the trade.

THE COLUMBIAN SPRING HINGE.

WARREN'S NEW STYLE CABINETS AND PRICES.

J. D. Warren & Co., Chicago, Ills., have recently issued their price list, dated September 1st, 1904, annulling all previous lists and terms. This new list contains many new designs in which are their standard sized Cabinets and Bases with prices as low as $1.50 per lineal foot for each, respectively, with the new "Chicago Pattern" line (the construction of Cabinet and Base combined), which is very practical and at popular prices, the complete Cabinets and Bases varying in prices from $18.75 to $70.00 each. During the two years since their last price list was issued, great improvements have been made on every standard Glass Front Cabinet and Base, so that in the completion of their World's Fair series they produce that which the term Shelving is not a correct defining word of what they are, as the duties performed by them surpasses the ability of any individual possessing in themselves the various qualifications of buyer, seller, stock-keeper and accountant, to such an extent as to constitute a complete store keeper, requiring but little ordinary aid in performing all the requirements of successful merchandizing, inasmuch as they display, give the price, and enable the delivery of all styles of Hardware goods from A to Z inside of one minute. The price of each Cabinet is pro rata alike in keeping with the cost of construction, the cost of the highest priced ones being mainly labor, through which advantages they are more self-operating and pay for themselves quicker than the less expensive styles, their seven patents serving solely in the office of enabling the construction in such complete, first-class manner as the merchant desires it, and on which they court the opinion to be given him by any local, first-class cabinet maker, whether the prices are high or low on fixtures so perfectly constructed that they are willing to guarantee them for the lifetime of any average Hardware establishment.

CHAIN INDUSTRY IN GERMANY.

(From United States Consul Langer, Solingen, Germany).

During 1903 there was an increased demand from foreign countries for chains from German factories, enabling them to again employ the hands which had been discharged for lack of work. Competition by machine-made chains and chains welded by electricity tended to lower the price of forged chains, although the quantity used did not decrease. The trade in crane and ship chains remained about the same during the first half of the year in spite of the labor strike, which lasted nearly three months. During the last half of the year a very noticeable slack set in, which still continues, chiefly because of lack of activity in navigation so that hardly any orders are received from harbor cities. As a result of the strike, during which factories in the city of Iserlohn, the principal chain-manufacturing center of Germany, were entirely shut down, foreign competitors received a good share of the orders, and much of the trade thus acquired is still held by them. JOSEPH J. LANGER, *Consul.*

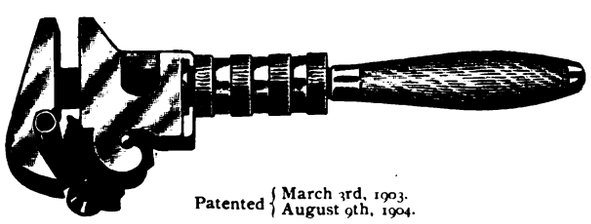
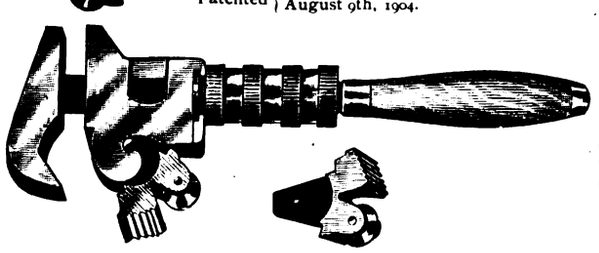
Nothing Like It.



Combination Pipe and Monkey Wrench, and Pipe Cutter.

Quality and Utility Absolutely Guaranteed.



It Does Its Work Easy and Perfectly.

Each Tool perfect, and will do the work of Three Separate Tools. The ***TIPPING*** feature in the Pipe Grip insures a ***positive*** and ***instant*** Grip, and holds Pipe firmly without crushing, will not slip or lock on the pipe, and releases instantly on backward movement without wedging. By throwing the Gripping Jaw back, the pipe can be placed or replaced in V of Wrench without running nut or sleeve back more than one turn. The ***PIPE CUTTER WHEEL*** is eccentric, thus insuring a free and rapid cutter, and enables the operator to force up on the nut, or sleeve, when low part of Wheel is in contact with the pipe.

RED JACKET MANUFACTURING COMPANY OUTGROWS ITS BIG PLANT AND IS NOW MAKING PREPARATIONS WHICH WILL DOUBLE ITS PRESENT CAPACITY.

The Red Jacket Manufacturing Company, whose "so easy to fix" pumps are known all over the world, has made possible its further expansion by the purchase of a six-acre tract in West Davenport, on which will shortly begin to arise several modern factory buildings that will, with the commencement of the coming year at the latest, be hives of industry humming just as lively as is the company's present big factory.

The tract is located on the joint line of the Rock Island and C., M. & St. P. systems, with a frontage on the railroad of 250 feet. It was purchased from the Meumann estate, for approximately $1,000 an acre, and the heirs are to open a road from the factory site to the Rockingham road. An option on six adjoining acres has also been secured, and before it expires, in a year's time, the company may add that tract to its holdings, as it has every reason to expect that it will outgrow its new plant as fast as it has its present one.

The purchase means the immediate erection in West Davenport of a large foundry, 85x200 feet, a machine shop, 85x200, a rattling room, 40x80, a power house, 32x40, a fire-proof pattern vault, 40x60, and casting sand, coke and pipe sheds and other storage buildings.

A switch track will be run through the center of the property, from the adjacent joint Rock Island and Milwaukee track, and the buildings will be on both sides of the track.

The foundry is so located on the side track that all material used will be unloaded from the cars in the immediate vicinity of where it will be used. Care has been taken, too, in the location of all the buildings in relation to each other so that there will be no unnecessary handling of material.

These will all be of modern one-story fire-proof construction, and when in use will double the capacity of the factory and the number of men employed. The new foundry is expected to give employment to 100 men and the new machine shop will keep 125 more busy. All the buildings will have the most modern equipment for doing their work, a majority of the castings will be made on molding machines, and the company, instead of being months behind with orders, and compelled at times to turn away good business, will be in a position to work up its foreign field and tell the domestic buyer that they not only make the best pumps in the world at Davenport, Ia., but that his order can be filled promptly enough to satisfy any reasonable man.

The Red Jacket Manufacturing Company recently found it necessary to increase its capital by adding $50,000 of 7 per cent. cumulative preferred stock and providing for the issue of stock up to $250,000 to give facility for further expansion, which is one of the certainties of the future.

The company was incorporated April 4, 1895, with a capital of $75,000. It then manufactured but two pumps, one for shallow and one for deep wells— in several sizes, of course. These were the original Red Jacket "so easy to fix" pumps. The fact that all the working parts of a Red Jacket pump can be pulled out of the pump and any defect repaired without removing the pump from the well is what has made the terms "Red Jacket" and "so easy to fix" synonymous all over the world. A monkey wrench is the only tool needed to repair the Red Jacket, and it is to this fact more than any other that the Davenport company ascribes its remarkable success and the phenomenal popularity of its pumps.

In nine years the company has added a great many styles of pumps to its original pair, meeting all conditions and requirements from Canada to New Zealand, until now it manufactures over 75 kinds of pumps, embracing over 300 styles and sizes.

It also makes about 60 kinds of cylinders, from 1¾ to 6 inches in size, and from 10 inches to 5 feet in length, making with their variations in equipment about 3,000 styles of cylinders that it furnishes to its trade.

Pumps that work by hand, that are propelled by windmills, gasoline engines or other power, from the simple house cistern pump to the large town force pump for fire protection—all these are now included in the output of the Davenport factory.

Its specialty, however, is its deep well force pump, for use in wells of any depth. A great many of its pumps are being worked successfully by hand in wells 400 and 500 feet deep, a test which leaves nothing more to be said.

The secret of the success of these deep well pumps lies in the almost complete elimination of friction by the use of the special Red Jacket pipe which the company manufactures for use with its pump. This pipe being of large diameter and light weight permits of the use of a wooden rod, and the combination works to perfection.

The company also manufactures a large line of pump sundries, such as valves of different kinds and for different uses—strainers, air chambers, force heads for power and gas engine use, rod couplings, etc., etc. It also makes a large variety of hydraulic cup leathers and valves and many other things appreciated by the trade.

But all this output must be sold. It sells without argument, but the company keeps ten traveling men on the road to keep in touch with its trade. It now has over 3,000 customers in the States of Iowa, Illinois, South Dakota, Nebraska, Missouri, Wisconsin, Indiana, Ohio and Michigan. A list of over 100 wide-awake jobbers also handle Red Jacket pumps exclusively in the rest of the United States and Canada, receiving the goods in car load lots and distributing to the dealers in the territory they cover.

The States named are supplied directly from the home plant, and are covered by eight salesmen, while two circulate among the more distant agencies.

Having met the domestic demand for its goods only with great difficulty, the company has not sought to work up a foreign trade. It has, however, exclusive agents in Australia, New Zealand, the Argentine Republic and other foreign countries, and has shipped its pumps to Mexico, France, Germany, England, India, Egypt, South Africa and most parts of the known world.

MEMBERSHIP CERTIFICATE OF SOUTHERN SUPPLY AND MACHINERY DEALERS' ASSOCIATION.

The certificates of membership of the Southern Supply and Machinery Dealers' Association, which have just been issued to the members of that association, are beauties, as will be acknowledged by all who have seen them. The name of each member is engraved on a certificate, together with the date of admittance, and then signed by the secretary-treasurer and president, afterwards neatly framed and expressed to the member. These certificates have been given prominent positions in the offices of the members of the association and speak in no uncertain words of the high regard and attachment each member bears to the association, which—though in its infancy—has made marvelous growth and established for itself a name and reputation known and recognized throughout the entire country.

HONORARY MEMBERSHIP.

The resolution adopted at the third annual convention of the Southern Supply and Machinery Dealers' Association, held at Old Point Comfort last April, granting manufacturers, under certain conditions, the privilege of honorary membership, has proven of very great benefit to both the association and the manufacturers who have availed themselves of the invitation to join the association. We understand that the manufacturers are not only willing to form this connected association, but are anxious to do so. They recognize the fact that the dealers' welfare and success is but a reflection of their own condition, and are therefore striving to better the dealers' conditions. There was a time when certain manufacturers imagined that they could cultivate both the consuming and jobbing trade—not only profitably to themselves, but also satisfactorily to all interested. In other words, they sold the dealers their goods and then competed with the dealers for the consumers' trade. Since the advent of the Southern Supply and Machinery Dealers' Association conditions have changed. The manufacturers have been brought to see the error of their ways, the dealers have likewise remedied some of their own shortcomings, and the standard of business dealings is accordingly on a much higher plane and constantly striving for higher attainments.

President Blow extends all manufacturers a cordial invitation to become honorary members of the association. Blank applications and any other data or information will be cheerfully supplied upon request.

Very encouraging reports are received from all sections of the country regarding the work which has been accomplished by the Southern Supply and Machinery Dealers' Association. Its membership is rapidly growing and its sphere of usefulness increasing from day to day. All supply and machinery dealers not now connected with the association are cordially invited to join. Full information will be cheerfully furnished upon application to President Blow.

♣

Here's a pretty good leap year limerick "made in London:"

A girl, who was quite an adept,
As to Reginald's elbow she crept,
Whisper'd into his ear,
"This is Leap Year,' my dear!
Do you think you could leap?"—And he "lept."

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED AUGUST 23, 1904.

368,632. BUCK SAW. S. Walter, Dallas City, Ill.
368,646. SASH FASTENER. G. W. Brown, Bridgeport, Conn
368,657. DOOR CHECK AND HOLDER. C. M. Elkins, Wakefield, Mass.
368,667. RAZOR STROP. G. Helm, Detroit, Mich.
368,737. EXTENSION LADDER. C. A. Staples, Cambridge, Mass.
368,922. FISHING LINE REEL. W. D. F. Jarvis, Phippi, W. Va.

PATENTS ISSUED AUGUST 23, 1904.

768,072. FLUTING DEVICE. H. S. Pease, Cincinnati, O.
768,113. SELF-TIGHTENING TOOL HOLDER. E. S. Costa, Quincy, Mass.
768,135. BLIND ROD CLAMP. J. F. Fuller, Rowland, N. C.
768,133. DOOR CLOSER AND CHECK FOR OPERATING DISINFECTING DEVICES. F. A. Martin, Chicago, Ill.
768,137. DOOR HANGER. J. T. McCabe, New York, N. Y.
768,312. SLIDING DOOR GUIDE. E. T. Robinson, St. Louis, Mo.
768,416. WINDOW SCREEN. C. G. Woods, St. Louis, Mo.
768,417. WINDOW SCREEN. C. G. Woods, St. Louis, Mo.
768,441. SCREW DRIVER. T. W. Fisher, Helena, Mont.

PATENTS EXPIRED AUGUST 30, 1904.

368,954. SELF-HEATING SAD IRON. Wm. Kratz and Chas. P. Kratz, Evansville, Ind.
368,960. SASH FASTENER. W. F. Morse, Norwood, Mass.
368,977. PICKET FENCE. E. F. Shellaberger, Beaver Falls, Pa.
369,010. LANTERN. J. H. Kelly and E. P. Follett, Rochester, N. Y.
369,017. CARPET SWEEPER. W. J. Drew, Grand Rapids, Mich.
369,108. CAN OPENER. Wm. J. Hammer, Boston, Mass.
369,236. REVERSIBLE SASH WINDOW. F. H. DeGuerre and W. W. DeLano, San Francisco, Cal.
369,273. EGG BEATER. T. W. Brown, Belmont, Mass.

PATENTS ISSUED AUGUST 30, 1904.

768,669. DOOR HANGER. Wm. Louden, Fairfield, Iowa.
768,718. DOOR SPRING. A. C. Austin, Hudson, S. D.
768,770. COMBINED MOP AND MOP WRINGER. Chas. E. Shaw, Spokane, Wash.
768,897. CUSPIDOR CARRIER. Chas. H. Gunn, Angels Camp, Cal.
768,899. STOVE MAT. Z. T. Hall, Ridley Park, Pa.
768,912. FLAT IRON. H. M. Horine, Chicago, Ill.
768,952. KNOB FASTENING. G. W. Roberts, Laanna, Pa.
769,109. SASH PULLEY. W. N. Packer, Shelby, Ohio.

SOUTHERN GRIT.

Galveston's sea wall, three and one-quarter miles long and standing seventeen feet above mean low tide, was finished, and the work of raising the grade of the city to a level with the top of this barrier has begun. The predictions, made at the time of the city's engulfment, that the location of this great entrepot of the South would have to be changed have been splendidly refuted. There are few tasks so hard that they can not be accomplished where there is a will to do. Faith moves mountains, but only figuratively. Grit does so actually when it causes them to be shoveled into cars and hauled away; it sets limits to the sea and enables a city whose inhabitants are possessed of that quality to pluck a victory out of seemingly overwhelmingly disaster.

EARLY ENGLISH PATENTS.

Long before the passing of patent laws in England, monopolies for the manufacture of certain articles were granted by personal favor of the King and for a time this practice proved of great benefit to the people. However, the rapacity of the Stuarts caused them to grant licenses for their personal gain, irrespective of the prosperity of their subjects at large. This brought about the forcing from James I. of a statute which abolished monopolies with this exemption—that monopolistic privileges should be permitted for the "sole working of making of any manner of new manufacturers which others at the time of making such letter patent and grants should not use, so that they be not contrary to law or mischevious to State." The immediate successors of James I. managed to override this law but still, until the nineteenth century, the granting of letters patents remained the monarch's prerogative.

Perhaps the oldest Hardware patent on record was one granted in 1571 to Richard Matthew for "knife-handles made of divers pieces of horn mixed with yellow or white plate." The blades were stamped with a crescent, showing the Mohammedan origin of the design. It is hinted that Matthew had possessed himself of samples of the built or inlaid hafts of Oriental make still common in the East, and was himself only the appropriator of others' ideas. Still, his patent brought him some fame, but the Cutlers' Company, scenting the commercial benefits of the process, disputed his rights, claiming that the trade at large ought not to be restricted from the use of what was only a slight improvement on an existing industry, and Matthew's monopoly was declared void.

In those days patents were few and far between. All the older specifications are interesting as illustrating the special needs of the time, many of them also because of the very impracticability and grotesqueness of the suggested mechanical devices. Perhaps the form of genius nearest akin to madness is mechanical genius.

From 1625 to 1634 only sixty-one patents were granted, so that the clerks in the Patent Office must have had even an easier time than they have at present.

Then, in 1660, when the letters patent numbered only 131, Edward, Marquis of Worcester, registered a device whereby, he said, it would be made possible, for a passenger to loose a carriage from its shafts in the "twinckleing" of an eye in the event of the horses bolting. This same Marquis of Worcester was a genius in spite of his rank. He invented and constructed the first actual steam engine, which was used for raising water. He actually erected one of his engines of about two horse power on the banks of the Thames at Vauxhall, where it was employed in supplying the neighborhood with water.

Twenty-three years later, in 1683, an important patent was taken out by William Palin and William Loggins for a process of iron rolling to take the place of drawing the iron by hammer and hand. Could these gentlemen rise from their ashes and see the present-day application of their idea, what a pride would be theirs! But their very names are forgotten, except for the record in the Patent Office.

The wheels of travelling carts and coaches played havoc with the roads. This accounts for the ideas of Kendrick Edisburg, who in 1691 proposed to substitute wide rollers for the wheels, and of Anthony Barlow, who a few years later proposed to attach to the peripheries of the wheels, iron bars, or plates. Thus they sought to preserve the roads from the deep ruts which were the causes of nearly all the inconveniences of travelling.

SHORT SERMON ON ADVERTISING.

Big type doesn't always mean good argument.

Good advertising and good sense are first cousins.

Anybody can cut prices, but it takes salesmanship to sell goods at a profit.

Confucius said, "He who speaks without modesty will find it difficult to make his words good." Remember this when you sit down to write an ad.

Everything comes to the man who goes after the things some other fellow is waiting for.

The plain, every-day, "human interest" element in advertising will sell more goods than the mystical side of it.

One robin don't make a summer, neither will one good advertisement keep the store full of customers.

The quality to be most earnestly striven for in advertising is not originality, or cleverness, or even personality, but INFORMATION.

Advertising is the business news of the store. When it stops, the public have a right to believe that there is "nothin' doin'."

Good advertising simply holds the mirror up to the commodity, reflecting it so faithfully that readers will come under its attraction—not under the attraction of the advertising, which is just a medium and nothing more.

The greatest asset in advertising is public confidence—the knowledge on the part of the public that when you say it is so it is so. This asset is easily acquired through honorable dealing and as easily lost through sharp practice.

Always leave something unsaid in your ad. Telling the whole story is not wise. Judgment is seldom influenced when you rob the reader of his natural desire to find out more about the article than is told in the ad. This desire to find out more often produces a sale. Small words are the strongest words. They are most easily understood and make deepest impressions. It takes more skill to use small words right than to use big words, because the small words have got to mean something.

One billion dollars is expended annually for advertising in the United States—that's two and a half million dollars a day or thirty dollars every second. The department stores of New York City spend over four million dollars a year for publicity. The list is headed by John Wanamaker, with an estimated expenditure of $500,000 a year. Seven of the great railroad systems of the country spent last year $1,265,000 to advertise their lines, the New York Central being well in the lead with an appropriation of nearly $350,000. And still there are those who don't believe advertising pays.

HARDWARE FACTS AND FICTION NOT GENERALLY KNOWN

(Specially Contributed)

SIXTH ARTICLE.

ALL ABOUT CUTLERY.

The use of knives dates from the earliest times and begins with primeval man who rubbed flint flakes until a sharp edge was obtained, thus forming a knife. So right through the ages of man's existence upon this earth—many thousands of years in point of time—a steady development in the manufacture of knives has been going on. History quotes many instances of the progress made, and also of the different forms and uses of knives.

In early records knives and swords are intermixed, pointing to the offensive and defensive purposes for which knives were made, and how sharp-edged weapons were required from the neolithic age onwards. Indeed, the term "cutlery" applies to edge knives or various forms and shapes used concurrently for warlike and peaceful uses. It may be taken that "cutlery," in its various forms of transition, is a word denoting knives, scissors, razors and any other sharp-edged cutting instruments. The process of evolution from the flint and stone celts to knives of iron and steel including in development bronze knives and copper swords, and incidentally bronze reaping hooks and other articles of husbandry, has been steadily going on until the present time.

In the Naples Museum there are many bronze hooks and knives from Pompeii. Lancets and shears, too, of bronze and iron, are preserved among Roman remains, thus bringing the manufacture of cutlery down to historic times. The Anglo-Saxons had knives somewhat resembling razors and forks also—although not used for feeding purposes.

Homer says the knives carried at the girdle in his day were of triangular form. Many of the knives found in British barrows had long narrow blades, others again being broad and of dagger form. Both Normans and Anglo-Saxons carried about with them a met-soex or eating knife. King Athelstan left his knife on the altar of Beverley Minster as a pledge for his redemption of a vow of benefaction. Up to the end of the fifteenth century knives do not appear to have been used much at table, but as everyone carried a knife at his girdle possibly it served to cut meat with in common with many other uses. Meat knives of Queen Elizabeth's day had handles of white bone with jewels set in them, thus being antitypes of the bone handle tabled cutlery of later days.

Spring shears of Roman form were the only kinds of cutlery known with springs up to Norman times. Of course, spring pocket knives are a comparatively modern invention, but previous to their introduction "jack" knives, which shut into a groove or handle without any spring or lock, were made. The manufacture of metallic knives in England was doubtless at first isolated, and confined to the village smiths who were, possibly, cleverer than some of their neighbors. As time went on "cutlers" as makers of cutting weapons and tools were called, banded together in larger centers for mutual protection, and later were granted special charters in the manner customary in those days when Guilds of traders were no sinecures, and when power to deal with commercial matters was needed; the law courts of the period not being competent to understand trade disputes.

The Arms of the cutlers of London were granted by Thomas Holme Clarencieux, Knight of Arms, in the sixteenth year of the reign of King Edward IV., and later they were granted a crest which consists of an elephant bearing a castle.

Knives were made in England for many centuries, but for the most part they were coarse, rough and crude. As time went on British cutlers advanced in the knowledge of their craft, and by the time James I. sat upon the throne it was generally acknowledged that the finest and best knives in the world were made in London. It is said that Richard Matthew, whose workshop was at Fleet Bridge, was the first Englishman who attained any great skill in making fine knives.

During the reign of Elizabeth he obtained a prohibition against all strangers from bringing any knives into England from beyond the seas (at that time the great place for making cutlery was Flanders). The same Richard Matthew also obtained a patent from Queen Elizabeth for making knives and daggers with a new kind of handle, but complaints were lodged against him by other cutlers in the city of London, it being urged that the prices charged were prejudicial to Her Majesty's subjects. In the London Hall of Cutlers' Company there is an ancient picture of a cutler named Crawthorne, who gave certain charitable bequests to the Cutlers of London in trust. The London Company of Cutlers were divided into three sections, namely, those who were smiths and forged blades, who were known as Bladers; the men who made hafts for the bladers, who were known as Hattmakers, and lastly the Sheath-makers, who made the sheaths for knives, swords and daggers. In the reign of Henry VI. these three companies were incorporated in the one fraternity, under the name of the Cutlers' Company.

SHEFFIELD CUTLERY.

Sheffield has long been associated with the manufacture of cutlery, and in 1565 it is recorded that a Court of the Rolls of the Manor of Sheffield a jury of cutlers was impanneled "to assign marks to the different manufacturers, whereby their respective knives could be identified." In 1624 the Sheffield cutlers who had been protected hitherto by the Lords of Hallamshire received an Act of Incorporation "for the good order and government of the makers of knives, sickles, shears, scissors and other cutlery ware." In 1638 a Hall was built in which they could transact business, and the "Feast" still given annually by the Master Cutler on his official appointment, was inaugurated. The trade marks granted mostly belonged to one of three classes. One or more letters, as IXL, (2) single words as names of persons or places, such as Carver, China, etc., (3) designs as, a dagger, a cross or an anchor. An interesting history of these symbols was printed by Gates & Martin in 1785.

The commencement of the manufacture of knives with springs in Sheffield is attributed to the 17th century, but, as a matter of fact, very few knives with spring blades were manufactured before the close of the 18th century. One of the earliest references to Sheffield cutlery occurs in Chaucer, in which it is said, "A Scheffeld thwitel bare he in his hose."

KNIVES AS DINNER APPOINTMENTS.

The introduction of knives as table appointments is of comparatively late date. Doctor Johnson asserts that knives as table appointments were not introduced in Scotland before the Revolution. Before that period every man had a knive of his own as a companion to his dirk or dagger. The men cut the meat in small portions for the women, who put them into their mouths with their fingers; the use of forks at table was then considered a superfluous luxury, and in Scotland was forbidden to the Covenanters by the decrees of their church. Princes and nobles carried knives at all times, substituting in later days swords. Spencer in his Fairie Queene uses the word 'knife' for a sword, "and after all his war to rest his wearie knife." Shakespeare, in the old quarto of 1597, makes Juliet wear a knife at the friar's cell. In the South Kensington Museum the dagger mark is to be seen on six of a set of fourteen knives, which have handles of ivory carved with portrait figures, representing English sovereigns, all of which, with the exception of Edward V., are represented with jewelled crowns. Nine of these figures are shown with swords, four of them holding a sceptre in the right hand. On thirteen of the knives there is another stamped mark which may be described as a diamond joined at one point to a trident, the knives are of English make and bear date 1607.

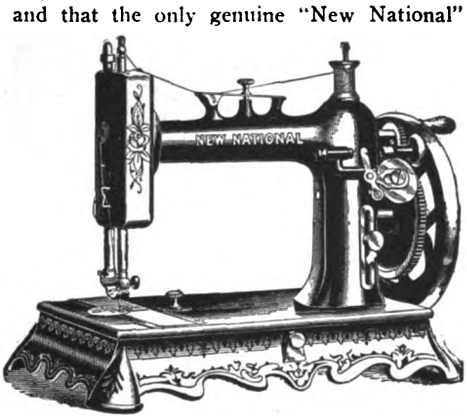
Although the manufacture of knives had been carried on for some time previously, it was not until 1820, when the first Lord Wharncliffe introduced his famous blade that spring pocket knives came into common use, and were carried regularly in the pocket. The Wharncliffe blade had a long term of popularity, and is still sold in considerable quantities in some localities.

Women seem to have been fond of wearing knives, and they appear frequently to have been given as presents, especially as wedding gifts. In the Shakespearian Museum at Stratford-on-Avon is preserved a case containing wedding knives as illustrative of the passage in Romeo and Juliet. The practice of wearing a chatelaine to a certain extent revived during recent years, afforded the housewife an opportunity of wearing a variety of useful articles at her girdle. Knives appear to have always been included in the group, although as time went on the size of knife was reduced, and its utility as a dagger of defence diminished. The knives worn at the present day are of diminutive character, and more ornamental than useful.

To return to the practical side of cutlery, as far as it relates to knives, it is surely unnecessary to remind Hardwaremen what kind of knives are sold at the present day, nor yet to relate the

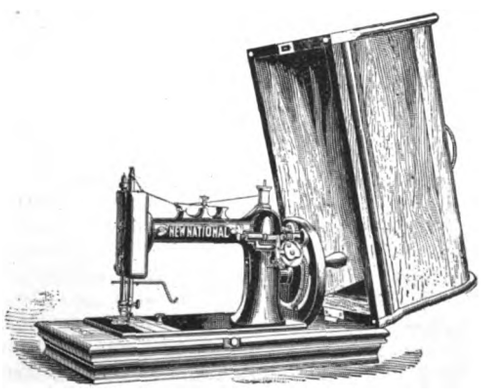
Digitized by Google

various types in common use. Table cutlery is made in every style, and with handles of various materials, and even different hues. Pocket knives have gone through many revolutions, and both large and small examples of cutlery have been produced. Knives with hundred of blades and curious fittings have been made up, showing to what perfection the cutler's art has reached.



The manufacture of cutlery is no longer confined to Sheffield and London, and the exclusive production has long past from Great Britain. The great works at Solingen show how Germany has cultivated the industry, and Americans know that the fame of the cutler has crossed the Atlantic. The keen edge, beautiful finish, and fine workmanship of the knives made in modern days in the United States have created a demand for American cutlery all the world over, even in Great Britain.

THE MANUFACTURE OF KNIVES.



The process of manufacture of knives is roughly the same everywhere, although the readers of a Hardware paper should know the manner in which a knife is built up, there may be some who will be interested to read a short description of the interesting process. The metal from which knife blades are formed is made from Swedish ore, it contains little sulphur and no phosphorus. The strips of hard steel which are rolled into the right widths for the blade are passed to a forger, who reheats the metal, and by skilful hammering tapers it to the form of the cutting edge, and shapes the point of the blade. Again it is hammered, this time over a flat mould, a projecting rim being driven into the blade to make the groove for the finger to open and close the blade when fixed in the handle. The operator cuts the steel according to the required length and finally forms the thick end, which is afterwards drilled for the rivet which attaches it to the handle. A table knife is formed differently, the strip of steel is thinner, and after being hammered to a cutting edge a small piece of steel afterwards to form the shank is welded as well as the tang. These are the blades in the rough, forged with marvelous rapidity by experienced workmen, ready for passing on to the grinding department, the last process being that of sharpening and polishing before fixing in their handles. Such is the brief history of the knife, as we understand it at the present day. In various forms of evolution it has existed from the earliest times, and doubtless will continue as long as man has any use for a cutting blade.

HAND SEWING MACHINES.

We illustrate herewith two styles of the "New National" hand sewing machines, manufactured by the New Home Sewing Machine Company, of Orange, Mass. In a circular recently issued by this firm, it is stated that these hand machines are being imitated, and that the only genuine "New National" machines

bear this firm's well-known trade-mark on the bed plate. It is claimed for these machines that they are made out of the best

material obtainable by the most expert workmen, and that each "New National" will outwear several cheap machines. It would seem that the reputation of the New Home Company for honest goods and honest statements would substantiate the above statement. The machines use a self-setting needle which cannot be set wrong, and make the double thread back stitch, which is acknowledged to be the only stitch adapted to all kinds of work of the household. Each machine is furnished with a hemmer and feller, braider and quilter, extra throat plate, screw driver, gauge and screw, six bobbins, seven needles, oil can filled with oil, and a direction book; and with each machine goes the following warranty: "All the wearing parts are made of the best material and case hardened. If any part fails from imperfection within three years it will be replaced free of charge. This does not include needles, shuttles or bobbins." Export orders for "New National" and other machines made by this firm should be sent to their New York office, 28 Union Square.

THE NATIONAL CUTLERY CO.'S NEW CATALOGUE.

THE NATIONAL CUTLERY CO., Philadelphia, Pa., have recently distributed a very handsome 1904 catalogue. They state that in issuing this catalogue their aim is to bring before the buyers the great variety of Scissors, Shears and Snips manufactured by them, and to call attention to their superior quality. Their company, they state, is composed of thoroughly practical men who have spent nearly half a century studying and perfecting themselves in their various departments of the manufacture, as well as the marketing of the product. To insure perfect welding of Shears and Snipes, they use a process by which they weld without injury to either the cutting edge of the fine steel or the metal to which it is welded. They make but one grade of goods, and that, they claim, is the best. The National Cutlery Company will supply their customers, without charge, with any electrotypes used in the above-mentioned catalogue, to be used in advertising their goods.

AMERICAN SHEET & TIN PLATE CO.

In a circular recently issued, the American Sheet and Tin Plate Co., Pittsburgh, says:

"In addition to the Continuous Roofing which we are making from sheets 84 inches and 96 inches long we can now also furnish the American Old Style, U. S. Eagle N. M., Numethodd, M. F., and other brands of roofing tin in the shape of rolls 14, 20 and 28 inches wide, containing one or two squares, painted with best iron oxide and linseed oil paint on both sides, on one side, or unpainted, as may suit the convenience of customers. Sheets of 14x20, or 20x28, are seamed together by double lock seam, which gives strength and rigidity to the material, permits expansion and contraction, and the tight fold of which makes soldering unnecessary for most purposes. If demanded, however, the double locked cross seams will be soldered for an extra charge. Accurate workmanship is guaranteed in this material as in all other products which the American Sheet and Tin Plate Company puts on the market. Prime plates only are used in the production of our continuous roofing tin. We have been induced to make this new departure by requests from a number of house builders and tin, slate and shingle roofers, who, realizing that the very best roofing tin is none too good for valleys and gutters, were anxious to use the above-named brands, but had formerly not been able to get them in the continuous shape."

EARLY LAMPS.

Another milestone in the march of invention is found in the file of 1784 in the British Patent Office Library in the specification of Ami Argand, who appreciated the value of draught upon flame, and hit upon the idea of obtaining better illumination by controlling the draught. He increased the measure of light, "converting the smoke into flame by causing a current of air to pass through the flame." This was the first center-draught lamp. Argand also produced another artificial current of air on the outside of the flame by a glass chimney or other contrivance covering, surrounding, or enclosing the flame. In 1842 a patent was registered for holding three separate candles so near to each other that the flames united, and the devices to cause candles to remain vertical were numerous in the earlier days of last century. In the earliest known lamps pieces of resinous wood were put into a brazier and set on fire. Next came splinters of wood tied together so as to form a torch, the air reaching the interior of the flame by the passages left between the splinters. Skip a century or two, and we find the primitive candle, made by coating a piece of rush or pith with melted fat or wax. Then we come to the civilization of Rome and Pompeii, when liquid fat or oil was burned in a lamp. But the Roman lamp represents a higher stage in the development of illuminating devices than does the "Crusie" lamp of hammered iron common in these islands so late as the beginning of the nineteenth century, and not even yet, we believe, altogether obsolete in parts of Ireland and Spain.

A LITTLE PLOW HISTORY.

In 1823 an inventor in the city of Hartford, Conn., made pattern for and cast the first cast plow bottom ever made. Before that the best plows made were of wood with straight plate or strips of iron to protect parts most exposed. Eight years ago the wood plow bottom was the highest state of the art. Nearly all the plows of that day and before were simply crooked sticks, a natural crook picked up in the woods, with a little metal protection. The best harrow was a few iron spikes; the best hoes were nearly as poor. At that time and long before, and however afterwards there will be a plenty of kickers against our changes or improvements, so that when Joel Nourse took an ox team in 1825, and carted from Hartford to Worcester, 300 cast iron plow bottoms, it was nothing strange that the kickers said, "That will be the end of Joel Nourse," but later on he was the head and front of a large concern, making many millions of similar plows and shipping them to every quarter of the globe. In 1825, or about that time there were but two great leaders in the world in the construction of metal plows. Joel Nourse was one of them, born in Massachusetts; the other was Frost Horton, born in New York. These two men, after getting the start from the Hartford inventor, kept on changing the forms to improve these plow bottoms, making them turn stubble, fallow and sod land to suit the idea or whim of different sections or individual conditions also making them to turn the furrow wide or narrow, shallow or deep, turning that up edgewise or otherwise. Until they had perfected each, nearly five hundred different kinds and forms, sizes, etc., to suit the demand of consumers. So much for the Right & Left hand plow. In the near time came the Augustus Sanborn, who made the first and all the improvements in Reversible drag plows bottom up-to-date. While Nourse and Horton were the first, it was all due to the original inventor of Hartford, in 1823, who made the first metal plow, and Sanborn, the Reversible Creator.

REVIEW OF THE MARKETS.

WIRE NAILS.—A good business is now being done, the stocks of Nails having run down and assortments broken up, ready to take advantage of lower prices. Prices are maintained firmly on the basis of $1.60 for car loads. The mills, however, refuse to make contracts longer than thirty days on prices now ruling. There is a disposition to do away with the differential between the jobbing and the retail trades as the quotation of $1.60 can be obtained by carload buyers of either class. The jobbers are meeting these prices, which leaves them little profit. Quotations are as follows, f.o.b. Pittsburgh, 60 days or 2 per cent. discount for cash in 10 days:

Carload lots $1.60
Less than carload lots 1.65

New York. A moderate amount of business is being done. The demand on account of labor troubles was exceedingly light. No change in quotations was caused, and they remain the same as previously quoted.

CUT NAILS.—At the meeting of the Cut Nail Association on September 8th, the official price on Cut Nails was made $1.60 for carload lots to jobbers, and $1.65 to retailers for Steel or Iron Nails.

New York. The local demand is a moderate one, and quotations remain as previously quoted:

Carload on dock $1.74
Less than carload on dock..... 1.80
Small lots from store..... 1.85

BARB WIRE.—Merchants are buying Barb Wire in a conservative manner, covering only their early wants. The mills, too, are refusing to enter orders at present prices for future delivery. There is a tendency to pay no regard to differential between the different classes of trade as formerly. The regular prices, however, are as follows, f.o.b. Pittsburgh, 60 days or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.75	$2.05
Retailers, carload lots	1.80	2.10
Retailers, less than carload lots	1.90	2.20

SMOOTH FENCE WIRE.—A larger business than previously had is reported from the mills, but the orders are not as freely sent, some of the larger ones being held awaiting lower prices from the contemplated changes. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads $1.45
Retailers, carloads 1.50

The above prices are for base numbers, 6 to 9. The other numbers of plain and galvanized Wire takes the usual advances.

SCYTHES.—The manufacturers of Scythes are naming their prices for next season's business. The Scythe market is now under the control of a strong association, including, it is understood, all the leading manufacturers in the field. The result is a substantial increase in price.

CORDAGE.—The following prices represent the market:

	Cents per lb.
Pure Manila, 7-16-inch and larger	11½
⅜ inch	12
¼ inch and 5-16	12½
No. 2 Manila	10¼@10¼
Pure Sisal, 7-16-inch and larger	9
No. 2 Sisal, 7-16-inch and larger	7½
⅜ inch	8
¼ inch and 5-16-inch	8½
Lath, Yarn, Medium and Coarse	7½
Jute Rope, No. 1.....	6½
No. 2.....	6

LINSEED OIL.—Under date of September 7, the following quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....46 cents per gallon.
In lots of 5 barrels or more.....45 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil.....65 cents per gallon.

THE PHILADELPHIA TRADE.

There is some complaint in regard to trade, but while business does not have the snap which it had this time last year there is still a large volume of goods moving, and as it is all a compulsory hand to mouth movement for actual wants it seems to show that the underlying conditions of the country are good. From all sides we hear that the farmers are having an unusually good year, as their products are bringing good prices while the crops are fair—in some instances large—and as the farmer still stands at the base of all prosperity we feel it is fortunate that the foundation stone of business is sound to-day. The reductions in the price of nails and wire and other goods have made trade apprehensive of prices, and while some lower figures have been announced on a few lines it is not at all surprising to receive in the same mail advances on other goods, showing that the situation to-day is mixed. Collections are not so good as we should like to see them. There is more or less complaint although with the good prospects of the South and the local farming conditions before mentioned we hope ere long to see an improvement in this respect also.

BIDDLE HARDWARE CO.

THE CINCINNATI TRADE.

Notwithstanding the drought and sultry weather in and around Cincinnati, our Hardware jobbers and retailers report a good month's trade in August, claiming that the long dry spell, while it has affected some lines, has not been discouraging generally. The jobbers all say that the Fall outlook is good, and the slump in iron and nails will do no material damage to prices of Hardware now ruling. The corn does not look as bad in this section as was expected, the cool nights and mornings having helped out the lack of rain. The Hudepohl Hardware Company, which recently bought out Christain Grueninger at 1018 Freeman Avenue, dropped one member of the original firm and, it is said, has made the company considerably stronger. The Tablet & Ticket Company, of Chicago, is showing a photo of a section of the shelving in the Orr & Lockett Hardware store in that city, lettered with white paper letters, to Hardware people in Cincinnati with a view of interesting them. The Stewart Electrical Company disposed of their entire plant at auction the first of the month, and as is usual in auction sales, prices obtained on some of the stuff were much in excess of the value. All factories and most of the business houses will be closed Monday, 5th inst., on account of Labor Day. The labor organizations, after the annual street parade, will have their outings at Chester Park, some one hundred organizations from Covington, Newport, and this city will participate in the elaborate entertainment to be provided. Christian Grueninger, former Hardware merchant at 1018 Freeman Avenue, died Saturday, September 3d, at his residence in Lockland, Ohio, aged 72 years.

THE PITTSBURGH TRADE.

Business is moving along in a fair volume for this time of year, but we look for a considerable improvement when the cool weather brings a demand for Fall goods. Merchants at present are disposed to be conservative in their purchases. Orders are for small quantities and buyers are apparently pursuing a hand to mouth policy until there is a more active trade in sight. The reduction in prices in the iron market should stimulate business. While it has not as yet brought about a very noticeable increase in the demand for wire and nails there is considerable inquiry for these lines and orders will doubtless be forthcoming shortly. The Pittsburg Exposition opens the first week of September and continues well through the month following. This is very popular in this section and results in bringing many of our out-of-town customers to the city. Special excursion rates are granted on all the railroads and the exposition itself in addition to the other points of interest of Pittsburg furnishes an attraction which is well worth visiting.

LOGAN-GREGG HARDWARE CO.

THE SAGINAW TRADE.

The Fall demand for business has improved somewhat, although the country merchants are buying from hand to mouth more than ever before. Collections are not as good as usual, as the farmers are busy gathering their crops, and consequently make the country merchants wait payment for the goods pur-

Digitized by Google

chased from them. The hay and oat crops have been harvested, and both are fairly good. The corn crop is late, but if the cold weather holds off there will probably be a reasonable crop. The sugar beets are averaging a better percentage of sugar than last year, and will soon be harvested, and the sugar factories will be at work. As crops are liable to bring a fair price to the farmer, we look for a better business later in the Fall.

MORLEY BROTHERS.

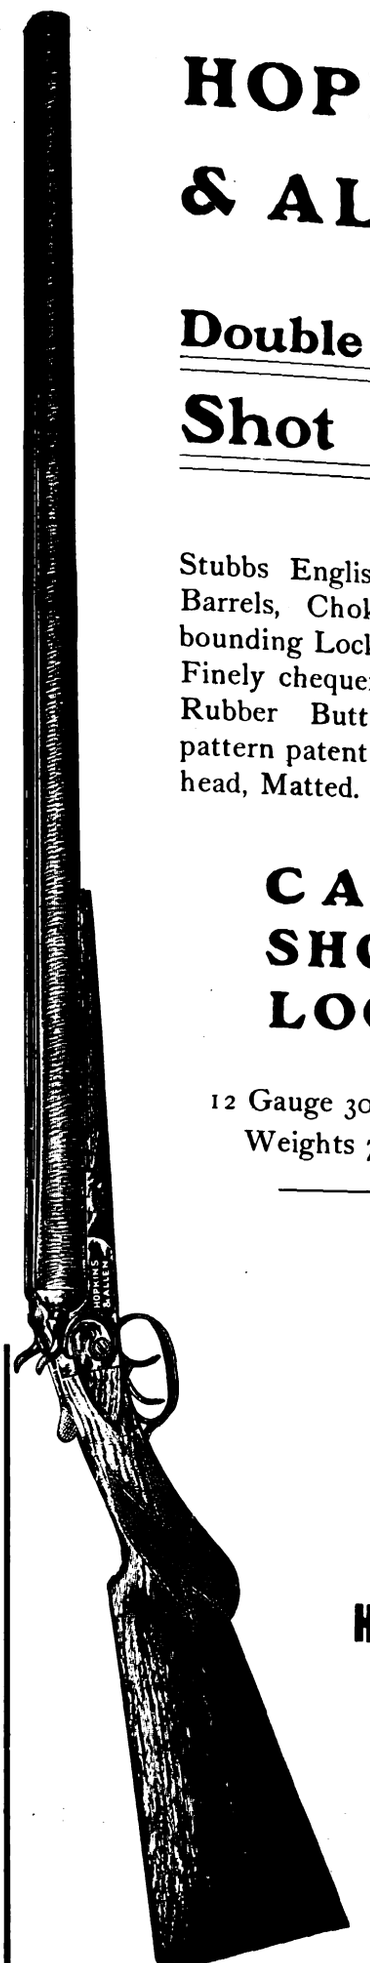
THE ST. PAUL TRADE.

As the harvest advances, we continue to hear all kinds of reports in regard to results. There is no question but what there will be a great average loss in wheat, but this loss is over such a large territory, and the damage so uncertain, that we cannot make an estimate. Some fields are good, others very bad, even to a total loss, and all in the same neighborhood, that nothing but the threshing machine results can be trusted. During the week ending September 2d we have had the State Fair in St. Paul and have been called upon by many of our customers. The result is, our expression in this letter. Our Fair is, as usual, a grand success, the greatest in this United States, and conclusively shows that this Northwest has advanced very rapidly, and with the thousands of acres of cheap land still to be had, the future has a roseate view. The action of the American Steel & Wire Co in reducing the price of nails and wire has not resulted in an increased business in that line, but, we are glad to say, has not had the effect we feared, that the trade would think that everything was going down. They appreciate that the reduction is simply to hit the outside manufacturer and does not affect those making other lines.

HACKETT, WALTHER, GATES HARDWARE CO.

THE MINNEAPOLIS TRADE.

We have had rather bad weather for harvesting and consequently the question as to the amount of the crop and what condition it is in is so that even those that are in better position to judge than we do not agree. There is no question but that there has been a very heavy crop of flax, barley and potatoes. Wheat is badly spotted, crops on some farms in some sections being a failure either through too much water or rust, others in the same vicinity badly damaged by rust, which reduces the grade and so on to points where the yield is considerably better than usual. There is without any doubt a shortage of wheat and considerable damage in our opinion, and this seems to be shared in by a great many others that the writer has talked with. The increased price of wheat and the comparatively high prices of the other products together with the large yield will possibly bring in as much money as any crop we have ever had. The unfortunate part of the matter is that there are sections where people have got hurt on wheat, who depended upon wheat almost entirely, therefore business will be cut off to some considerable extent in those sections. On the other hand, the farmer as a whole is free from debt and has money in the bank, so there will be little or no real suffering on account of this. The season is late, but there is still some danger from frost and so much wet weather there is danger of potato rot. There is one trouble about the crops, there is no certainty about them until they are harvested and in the bin. Things are running along fairly smooth here, decline in price on nails, wire, etc., of course affected dealers who had stock on hand, but it is not so serious now as it would have been a few years ago, for we are getting a little larger margin of profit on those goods as a whole than we were. We think generally people are rather inclined to purchase moderately, with the expectation of any change that may take place, it would be in the way of a decline rather than an advance. As far as anything we can see there will probably be a good Fall trade locally with a small shrinkage in the country.



W. K. MORISON & Co.

THE SAN FRANCISCO TRADE.

On this beautiful summer-like iniation day of September there arrived in town many a carload of Eastern Sir Knights, who found the Hardware people well to the front with other tradesmen in decorating their storehouses with "Welcome" banners in honor of the national assembly of the twenty-ninth triennial conclave of Knights Templar, to be entertained by the city every day next week.

Local Hardware circles seem considerably interested in the prospect of Henry J. Morton, acting president of the Pacific Hardware and Steel Company, succeeding permanently to the presidency, vice A. L. Scott, who is now in his fourth month abroad for health and pleasure and who, it is said, is thinking of retirement from the presidency.

The Pacific Hardware and Steel Co., the amalgamation of the

George W. Gibs Co. and Miller, Sloss & Scott, is contemplating an early removal from the southwest corner of Fremont and Mission streets to the southwest corner of Seventh and Townsend streets, distant six blocks south and seven blocks west. This will be the pioneer movement of a mercantile concern to that section, and may mean its complete transformation within a few years. At the prospective new Hardware corner the company is negotiating the purchase of eight fifty-vara lots, which it intends to improve and to which its purpose is to remove. The three main reasons which dictate this course are that more space will be obtained, there will be less outgo in the equivalent of rent, and proximity to the railway tracks of two, and possibly three, transcontinental lines, which will afford better facilities for conducting business. At the corner of the new site selected are four fifty-vara lots valued at $95,000, while adjoining on the inside are four more fifty-vara lots involved in the deal, valued at $75.000. On the front of this property the company will erect a three-story and basement brick building, to contain the store, offices, etc., while in the rear it will build a one-story warehouse of 160 feet in length. It is calculated that the structures can be finished so as to be occupied by the stock and personnel of the company, consisting of nearly 400 people, early in the new year. The present premises of the company are occupied under lease, which has seven years yet to run. This fact, however, will make no difference in the removal, as an amicable arrangement has been reached by the company with the owner of the land and the building. As Miller, Sloss & Scott were the pioneer business house at the lower end of Mission street, so its successor, the Pacific Hardware and Steel Co., will open the way to the new wholesale district in the vicinity of Seventh and Townsend streets.

The personnel of the prosperous and widely known San Francisco corporation whose trade name is Charles Brown & Son are now all at home. Not many weeks ago, when Max M. Brown, manager of the house, returned from his Honolulu vacation and was elected president of the San Francisco Retail Hardware Association, his brother of the corporation, Ben C. Brown, made a handsome selection by taking for his better half Miss Hattie Cahn, and then hurried away overland to write his name "and wife" in the register of the Inside Inn at the World's Fair city.

INDUSTRIAL PRESS ASSOCIATION.

ARE YOUR CLERKS THIS KIND?

"I was sitting in a fair-sized Hardware store the other day," said a traveling salesman for a Hardware jobbing house, "waiting for a chance at the proprietor, when I heard a woman endeavoring to make a purchase of a clerk. No, I don't mean that he was trying to make a sale to her. I stick to what I said. She evidently wanted to purchase a number of articles, and he seemed to be doing his best to prevent her.

"He was busy putting figures on a lot of tickets, and kept at it all the time she was talking to him. 'Do you keep those things for cleaning out sinks?' she asked. 'Do you mean a pot-scraper?' 'No, a thing to clean out sinks. One of my neighbors was telling me about them.' 'We may have them, but I have never seen any of them.' All the time he was at the tickets and never looked up at her.

"'Are those mouse-traps?' she went on, pointing to a shelf. 'Yes,' he said. 'How much are they?' He named a price, still busy with his pen.

"She walked over to a show-case and looked it over. Then she came back. 'Do you warrant your shears?' she asked. 'I was awfully sold on the last pair I got, but I didn't buy them here. Do you warrant yours?' 'Some of them we do, and some we don't.' He dipped his pen and began on a new lot. She stood still for a moment. Then she said, 'Is your silverware any less than it was before the holidays?' 'The boss was talking about marking some of it down, but I don't know whether he has or not.' Silence on both sides. Then he said, 'Do you want any of it?' 'Not unless it is a bargain.' Neither she nor I found out whether he had a bargain or not, for he never opened his head. She stood about in an uncertain manner, moved up towards the door, and in a little while gradually worked her way into the open air.

"Determined to find if he was actuated by any motive except bull-headed, jackassical stupidity, I said, 'Is her credit bad, or what's the matter with her?' 'Never saw her before in my life,' he responded, as he went on with his tickets.

"No wonder a lot of fellows who start out in business end up in the poor-house. I wish I had been the owner of that store for about an hour. That clerk would have hit the pavement hard when he landed."—*The Bookkeeper.*

Our Trade Mark stands for

SUPERIORITY

It points the way to good profits and increased sales in selling

WOOD FILLERS VARNISHES AND PAINTS

THAT POSSESS

CHARACTER

It makes all the difference in the world to a Dealer whether his goods are well regarded or not, for when it comes to buying Finishing and Painting materials the majority of people, after all, want the best, and if you do not have the reputation of handling superior goods, the discriminating buyers will go elsewhere.

You can get and hold the trade that is rightfully yours with the

"NICE" BRANDS

They are made and sold on honor. They possess all the qualities that your most exacting customers require and it needs no argument to convince them of this fact when once they have become acquainted with them.

Nobody ever questions the integrity of the contents of a can bearing the "NICE" label.

Catalogue "C," Booklet "Natural Wood Finishing" and Color Cards mailed on request.

EUGENE E. NICE

272-274 South 2nd St. PHILADELPHIA

THE LAST OF THE NAILS.

(*After The Last of the Barons*)

(Written for HARDWARE)

The enclosed sketch is based on the following news item, which might be well appended to the story:

The South Church, Salem, Mass., was destroyed by fire recently. Its beautiful spire, designed by Mackintire, was considered the most symmetrical in the country, and it was a favorite study of architects.

The church was built in 1805, and repaired in 1888. Parts of the building remained standing with remarkable tenacity, and, after the fire, the searchers found the hand-wrought Norwegian iron nails, which were driven into the steeple during the original construction, were almost as good as new, while the wire nails, used in 1888, were well nigh rusted away, or shrivelled in the fire.

Flames licked at the base of the tall church steeple, and the brothers, the Nails of Iron, looked calmly on. For 99 long years they had upheld the beautiful spire of the old South, in Salem town, but their strength was still great and their pride high, for their tower was a creation of Mackintire, the famous architect, and the most symmetrical in the country.

"See, the foe comes on hotly," said the elder brothers.

"Bah! yes, but we are Nails of Iron, and we'll stick to our post as long as there's a post left," returned the other.

"Shades of the Great William! See those cowards quail!"

"The varlets, yes. Those are the machine-made wire fellows who were sent here along in 1888 to reinforce us," returned the younger brother.

"Don't I remember well how spic and span and shiny they looked when they came here? They were as proud as new noblemen, and dared to hold their heads above us Nails of Iron. But in a few years their shine rusted away, and now the fire but hastens their finish. They were of mongrel breed."

"But we are Nails of Iron, who trace our pure lineage to Norway's hardy breats. We journeyed to this strange land in one of Skipper Derby's fleetest ships, and we were forged in Blubber Hollow by the might of the gallant men who fought with Washington. It's the stuff that's in us that makes us the brave and merry men of iron."

"That's just what the brave Col. Pickering used to say. I've heard him tell a story that well illustrates the point.

"One cold day, in 1775, 300 British marched to this town, shiny arms and brasses glistening in the sun, and scarlet coats like a crate of new boiled lobsters. Before their splendor one would expect the homespun colonials to flee, especially as the British wanted their weapons.

"The colonials did retreat, in masterly style, a bit. They just walked across old North bridge, hoisted the draw, and then sat astride it and thumbed their noses at the baffled 'lobster coats,' who found the river water too cold for a swim. So the British had to march again, and the stuff that was in the homespun colonals won."

"Yes, I knew Pickering in those days, and he was a brave and merry soul He fought with Washington and served in his cabinet before he built this church."

"Yes, and he and his mates well defended our rights, too. No syndicate ever got a corner on us."

"Nor did any grafter fatten their purses on us."

"And no walking delegate decreed that only one of us an hour might be driven home."

"Nor did any labor boss declare whether we should be hit with a tack hammer or a sledge."

"Oh! They were merry men who built this spire," went on the elder brother. "From sun rise to sun set, they toiled with a whistle and a song, each man was free and as independent as the air about us, and they were proud of their work. They had whipped the English lion, and the Declaration of Independence was life itself to them."

"But I heard a fellow," said the younger brother, "who was climbing over us getting measurements of this steeple the other day, say that the Declaration of Independence didn't amount to a continental in these days of trust kings and labor bosses, because it had no stock certificates nor union labels on it."

"Well, Pickering used to say that the Declaration of Independence didn't amount to anything more than as an essay on political government when Jefferson wrote it. But after Washington and others stood up and fought for it, it became the greatest document of the world."

"Oh, I know well that a single man who stands for his rights can make a hundred cowards and bluffers run. But it takes us men of iron to stand for our rights, and there's not many of us left."

Digitized by Google

"But, look, brother, we must make the fight of our lives now. See how the timbers around us are shaking."

"Yes, and we'll show the cowards how men of iron live and die. Why, brother, let's laugh. We've had many a strike here."

"Yes, the old clock in the steeple has struck every hour of the twenty-four for the last 99 years."

"And the statisicians and grafters in the public service can get a life job figuring how many times it has struck."

"Hark, there goes its last peal. It has crashed through the timber and fallen to the basement below."

"But we'll stand, brother, as long as there is an inch of board beneath us."

"Yes, like Nails of Iron, the last of our race. Against the storm and tempest, rain, hail, sleet and snow, and sunshine, and the ravages of time we've upheld this beautiful spire for years ninety and nine, and, please God, we'll stand so long again."

"But we face a new foe, brother. Look how the fire leaps upon us, tearing away our protecting timbers."

"Ah, but it will make us a beautiful funeral pyre."

"Hark! The charred timbers crack—and tumble—Farewell," and down into the ruins tumbled the Nails of Iron, the last of their mighty race, who upheld the beautiful spire of the old South after all had fled.

The next day, curio seekers in the ruins found the Nails of Iron as firm and as solid as when they were forged on the blacksmith anvil a year less than a century ago, but the new wire nails of 1888 were twisted and shrunken. And the curio seekers preserved the Nails of Iron forged on the blacksmith anvil ninety and nine years ago to show how well and strongly the forefathers builded F. A. G.

CUTLERY WORKS AT SOLINGEN.

An English correspondent in a descriptive letter about Solingen, Germany, says: It is delightfully old-fashioned and remote, a maze of little crooked hilly streets, queer turns and corners; full of houses, small and low—really cottages—green-shuttered, laced with timber beams or faced with slates. It has a population of 46 000 or so, and is the center of a popular district; so we must call it a town, a busy, brisk, and cheerful country town, though it has rather the characteristics of a large village. Sheffield must have been like this once long ago. The people are all engaged in the cutlery trade or minister to it; about 29,000 are employed in and about Solingen. They make knives and forks, scissors and swords. The art is believed to have been brought from Damascus by Graf von Berg on his return from the Crusades; but an alternative theory traces it to importation from Styria. However this may be, Solingen workmen early acquired a wide reputation and some times took their skill far afield. One of the names found on old Toledo blades is German and is still borne by cutler families in the place. The art was jealously guarded by the old guilds —the smiths, tempeiers, grinders and finishers—who strictly limited the apprentices and the output. Every master had to have a trade-mark, which was registered by the local authority, nailed up on the church door, and had a legal validity. The famous sign of the Twins dates from 1731, when it was registered by Peter Henckels; it has been borne by the same firm ever since. Their factory is the largest in the place; but out of 2,000 workmen only 800 are employed in the works, the remaining 1,200 work at home. This is the rule; the great bulk of the industry is carried on at home, as in old times, on the "chamber" system. It is encouraged by the local authority, which provides the men with gas and electric power, in lieu of the old water wheels. It has thus been preserved and developed alongside of the factories, which first came in during the last century and helped to revive the trade which had come to grief during the French occupation.

Cheap and inferior cutlery is turned out at Solingen, and not infrequently with the name Sheffield stamped on it; but they also produce goods of first-rate quality, and are able to compete with Sheffield on their merits. I should not venture to say so on my own judgment, but my authority for the statement is the highest. That they turn out very beautiful things can not be denied; I have seen exquisite specimens of damascened, inlaid, and other fancy work. The superior Solingen cutlery is not cheap; the material is the best Swedish steel, the same that Sheffield uses. An extraordinary thing about the cutlery trade is the almost incredible variety of knives made. At the Suffolk works in Sheffield, for instance, they have 10,000 different patterns on the books, and will be actually making 3,000 to order at the same time. I found just the same thing at Solingen; Henckels have 9,000 patterns for Germany alone. Every trade, every country, and even every district has its own knives; the Somerset plowboy wants a different knife from the Yorkshire plowboy, and new patterns are constantly coming out; the Suffolk works have averaged ten new patterns a week for two years.

"NATIONALS"

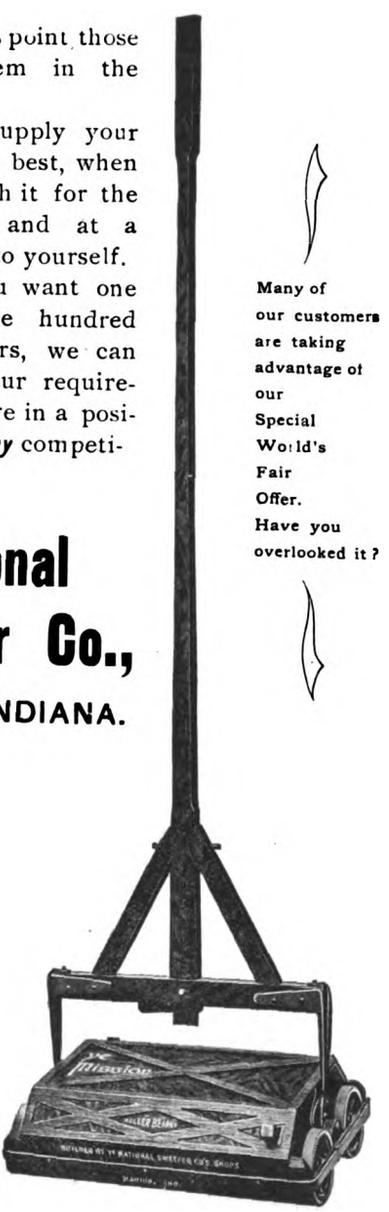
Stands for the very best, the most unique, the latest construction and the greatest efficiency in Carpet Sweepers.

It is an absolute guarantee of superior quality and finish, patented features of real merit, and those little details that go to make an entirely satisfactory Carpet Sweeper—small details that have added so much and were not to be had until introduced by us.

Have you ever stopped to compare what you had to "put up with" in the past, with that which you can obtain to-day from us? Those who are buying.

National Roller Bearing Sweepers

appreciate this point those who buy them in the future will.



Why not supply your trade with the best, when you can furnish it for the same money, and at a greater profit to yourself.

Whether you want one dozen or five hundred dozen sweepers, we can meet with your requirements. We are in a position to meet *any* competition.

Many of our customers are taking advantage of our Special World's Fair Offer. Have you overlooked it?

National Sweepor Co.,

MARION, INDIANA.

PEWTER.

Much of the tin produced in England was absorbed in early times between the Pewterers' Company of London and members of the same craft throughout the country. King John, says the *Ironmonger*, gave the Earldom of Cornwall with its privileges to his second son Richard, who derived from the stannaries or tin mines in royalty and fines an annual income of 200 marks, equal to about 20,000*l.* of our money. All tin had to be brought to certain specified towns to pass the Stannary Courts, and was there stamped with the mark of the Duchy. After certain dues had been paid the Guilds of the Mines could sell to whom they pleased, except that the King or the Duke had the right of pre-emption at the market price. Later, the Peweterers' Company of London obtained the right to purchase one-fourth of all the tin brought to London for sale. In common with all the other crafts carried on in the towns, that of the pewterer was doubtless bound by some sort of fraternity or association in the early Middle Ages, but the first formal institution of a Guild was in the reign of Edward III., A.D. 1348. The earliest rules for controlling the craft provide for the assay of all wares and for experts superintending the same. Anyone selling pewter before it passed the proper test was condemned to forfeit the goods. An incidental commentary on the primitive lighting arrangements of the time was contained in the rule that no work was to be done at night, as work produced under the flare of a rough torch, or, on the other hand, by the meagre light of a tallow candle, was not likely to enhance the reputation of the craft. The penalties for bad workmanship or for inferior quality of metal was forfeiture of the articles and fines; suspension from membership was also inflicted in some cases, and for very bad or often-repeated offences, expulsion. This last amounted almost to outlawry, for unless the offending member was readmitted it deprived him of his livelihood; since, if not a member, he could neither buy nor sell, nor be employed. A charter was granted by King Edward IV. in 1473 creating the existing Pewterers' Company. This charter is still preserved in the archives of the Guild. The powers already *de facto* possessed by the craft were by this instrument confirmed and extended, one of the most valuable new concessions being that of the right of search for inferior goods and metal below the proper standard of purity. In 1533 an Act was passed totally prohibiting the importation of foreign pewter, any so smuggled to be forfeited, together with a fine to the amount of the value. A high standard of commercial morality was enforced; for instance, no pewterer was allowed under a penalty of a fine of 20*s.* (probably equal to 10*l.* of our money) to say to a prospective customer that his goods were superior in quality to those of others.

No member was allowed to sell old pewter bought second-hand, and no pewterer was to act as scullion even for the Lord Mayor himself, nor to repair or clean pewter except at his own workshop. In the last year of Elizabeth's reign, it was forbidden to allow country pewterers and others to enter shops where London men were at work. "Whereby they come to great light of further knowledge." In other words, they were finding out trade secrets. The monopolies granted by James I. to the farmers of tin had a very prejudicial effect on the industry, and the company accordingly petitioned several times against the practice, which, after a time, was modified by the King. The sixteenth and early part of the seventeenth century must have been the palmy days of the pewter trade. The prosperity of the middle class brought substantial comfort into the homes of the artisan and the laborer, and every fairly well-to-do citizen, among other belongings, seems to have made a point of possessing his "garnish" of pewter. A "garnish" consisted of twelve plates, twelve smaller platters, and twelve dishes.

The causes of the decline of the pewter manufacture in England as on the Continent were mainly the competition of cheap earthenware for table and other domestic use, followed by deterioration of quality and design, and consequent loss of influence on the part of the English Pewterers' Company. Efforts, however, were made from time to time to revive the declining industry, but slowly and surely the products of the potteries ousted the plates, dishes, and vessels of pewter, whilst the art of plating inferior metals with silver displaced the old pewter dish-covers, cruets, salt-cellars, drinking-cups and the like.

Pewter work was either cast, spun, or hammered, and the methods of manufacture differ in no essential in the present day from those of the olden times. Most of the old pewter was cast in moulds of brass, which were highly finished inside and fitted with great nicety. But specially prepared iron was preferred nowadays. Pewter could be cast of any degree of thinness, and was turned out of the mould in a state requiring a minimum of work in the finishing process—apart from the inevitable polishing and soldering. In the active days of the Pewterers' Company the Guild was accustomed to purchase, and to have made to order, a large number of moulds, which were let out on hire to its members. The latter, of course, also possessed stocks of moulds of their own, often held in shares by different tradesmen. The elaborate pieces produced on the Continent during the Renaissance, especially in the sixteenth century, were cast in a different way—*i.e.*, in sand, and in sections afterwards soldered together. Even plain work, if limited in quantity, was often cast in sand, which, however, left a finely granulated surface, requiring a considerable amount of extra labor to finish them.

The solder used was and is still the hard solder of the Middle Ages, made of tin and lead, sometimes with a small proportion of bismuth, and when skilfully done the process ensured not only mechanical adhesion, but an alloy between the solder and the metals joined. The old pewterers strictly forbade the use of soft-solder—*i.e.*, solder with too much lead. Modern hollow-ware was often "spun" in much the same way as clay on a potter's wheel. The metal is forced into the shape required by a blunt steel tool on to a wooden "chuck," or block, of the shape of the vessel to be made, and the ornament worked by hand with the hammer and chaser. Some pieces were entirely hammered up from the sheets of pewter, and therefore bore the impress of individuality to a more marked degree.

THE BIG STORES.

A contributor to *The Star of Hope* gives the following interesting review of the growth of the world's leading mercantile establishments:

"The department store is scarcely a generation old. The first one I remember is Macy's, which began to develop about 1870 from a single shop on the Sixth avenue front where a small line of dry goods was kept, until it overran nearly the whole block and its floor space was reckoned by acres. Almost contemporaneously a dozen or more department stores grew up, some of them surpassing it in size. The genesis of nearly every one will be found in a little shop of two counters with a bit of shelving behind them to hold dress goods and prints. Such was the origin of O'Neill's, of Altman's, Stern's, Ehrich's, Bloomingdale's and the rest. Lord & Taylor and Arnold, Constable & Co., were, however, the offspring of great jobbing houses who erected them for the purpose of moving their own trade. In the case of Lord & Taylor the retail house ate up its parent, the wholesale branch. The greatest store in the United States and probably in the world is Marshall Field's in Chicago. Its owner was formerly of the firm of Field, Leiter & Co., wholesale dry goods, who shared with H. B. Claflin & Co., of New York, and Jacob Riegel, of Philadelphia, the cream of America's wholesale dry goods trade. Potter Palmer, recently dead, was a member of the firm.

The wholesale house from which the Leiter & Palmer interest has been withdrawn continues in diminished importance, but the retail division has had Mr. Field's personal attention and it is now accepted as the model of all that a department store can become. He himself is easily the first merchant in the world and has only one, at most, two rivals—John Wanamaker, and W. H Whitely, of Westbourne Grove, London. I am unable to classify in this association the "Bon Marche" and Louvre in Paris. They are conducted by chartered companies, anyway. The two largest stores measured by acreage are in Philadelphia, Gimbel Brothers, which has twenty-eight acres of floor space, and John Wanamaker's Grand Depot, which has twenty-six acres. Wanamaker does not sell groceries. Gimbel sells everything. Their career is illustrative of the system. They are seven brothers, sons of a Jew shop-keeper in Milwaukee, who left them a modest dry goods store in a favorable location in that city. They increased business, and the Schlitz brewery people backed the young men until they reached the limits of their locality. They then cast about for a wider field and selected the Quaker City, still maintaining their Milwaukee business. Boston's great store is Jordan & Marsh's, in Washington street. Seigel Cooper Co. are the first-class firm of San Francisco. The department stores in London, apart from Whiteley's, are the co-operative stores, as the Army and Navy, and the Civil Service. They are not opened to the general public. The buyer is supposed to be a shareholder, but it is customary for the members to lend their tickets so that outsiders in large numbers are their patrons. The co-operative store has been tried in this country, but unsuccessfully. The late Kate Field attempted to establish one on a large scale in Twenty-third street, New York. She was frozen out in less than a year."

We Sell to Merchants Only

Discounts Delays

Nothing more aggravating when you want to get a price quick than a long string of discounts to be figured.

And a year-old catalogue isn't very safe when it's information you can rely on right now that's wanted.

No Discounts in Ours

Just one price—our lowest price, net and guaranteed—is what you find for every item in our catalogue.

Besides, being issued monthly, the information in our catalogue is up-to-date. Pictures, description, prices—all right there in one place and all safe to rely upon right now.

All our Fall and Holiday lines are fully described in the September catalogue—No. C C 511—yours for the asking. Get a copy and

Try for One Month

the plan of keeping our catalogue in a handy place to be consulted every time you have an offer made to you—especially one of those whispered "confidential insides."

That's one way to make sure you're buying right. Also it's one way to compare our values with others—and comparisons are what we like. After a month of that kind of comparison, give us the final test: Order a mixed lot of our goods and put the goods themselves alongside similar things bought elsewhere.

Our Fall Catalogue

is an ideal one with which to test our ability to save you money.

It describes immense lines of Fall and Holiday goods and with its fresh prices and fresh offerings is worth paying for merely as a guide for buying.

But it's free to every merchant who asks for it.

Write now for our September catalogue mentioning No. C C 511.

FRENCH HARDWARE.

France to-day is far in advance of other nations in the decorative arts, and French Hardware, in the matter of design and finish, is finer than any product in any other country, remarks an architectural exchange. This statement does not in any sense discount the immense progress that has been made in American Hardware during the last twenty years or depreciate the high character of the product to-day. Indeed, if any man wants to realize how great the progress has been he has only to turn to the crude, inappropriate metal fittings that were the best at the disposal of an American citizen of taste anywhere in the "seventies." Prior to 1870 Hardware had about the same value artistically that a cast iron stove had, and in our costly houses of that time, hinges and door knobs and escutcheons were perforce usually perfectly plain. The Centennial exposition of 1876 forwarded the move towards artistic craftsmanship, and a few years later all the great Hardware concerns of the United States were working to bring their product into some conformity with the standards of taste and the standards of design that prevailed in the offices of the best architects.

It was quite natural, continues the writer, that at first the co-operation of the Hardware manufacturer with the architect should be on the most general lines only; that is, if the architectural profession was at any moment chiefly interested in the Gothic style, then the Hardware would conform to that style, or, at any rate, attempt to conform to it. This general co-operation once started extended through all the many experiments that our architects made with the Queen Anne style of architecture, the Romanesque style, Classic style, etc., and during the course of these experiments the co-operation became closer, until, finally, in recent years it ceased to move solely upon general lines, but extended to the point that the architect was offered something better than "stock patterns." "Style 684" in the catalogue of a Hardware house might indeed be an escutcheon or door knob or hinge design of good design, but so long as the catalogue was inevitably associated with standardized Hardware, clearly the artistic possibilities of the product were seriously limited. An improvement, no doubt, was made when the big Hardware manufacturers announced their willingness to undertake the special manufacture of articles to suit the particular requirements of architects, but the product, nevertheless, remained the product of the factory, and was vitiated by the principles and methods of the shop. Standardization with its catalogue, its order numbers, its subordination to the scheme of multiplication, has, of course, its advantages, but these advantages are not and cannot be those that are most sought for and desired by the artistic spirit. It is not under the domination of these principles that the great French artists work—men (for instance like Charpentier) who do not regard it as beneath their dignity to turn from the manipulation of a great piece of decorative sculpture to a model of a door knob or to design with exquisite detail a hinge or an escutcheon. But then, work of this latter kind is not for the catalogue, and it is exactly work of this character, thoroughly artistic in spirit and purpose, that our American architects are now demanding in the case of Hardware for the finer buildings they are called upon to design. Factory Hardware, despite its undoubted excellencies, is out of place, especially in the great residences that are now being reared for our merchant princes. When the wood carving is all specially designed and specially worked by hand, when furniture, pianos, carpets, wall paper even and china are all made to conform to the general effect designed by the architect, it is something of a solecism to equip the doors and windows with factory-made Hardware, some of which possibly may be found in duplicate by the owner of the house himself in his neighbor's mansion. The work of the artist—not the mere technical designer—is a necessity. The pieces should be as unique as the frescoes on the walls. For work of this kind the greatest artists that can be employed are none too good craftsmen. Men of this artistic standing, capable of work of this character and willing to do it are not numerous in the United States. They are, indeed, at the present moment almost entirely lacking. We have no one to compare with the great French artists of the present day and moreover, even had we the artists, we lack the craftsmen to execute their designs, and even the skill to finish them to the degree of perfection that pertains in France.

♣

Mrs. Jaggsby—I was very much surprised at the condition in which you came home last night.

Jaggsby—There you go again! I'd be willing to swear that I came home perfectly sober.

Mrs. Jaggsby—So you did; that's what surprised me.

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

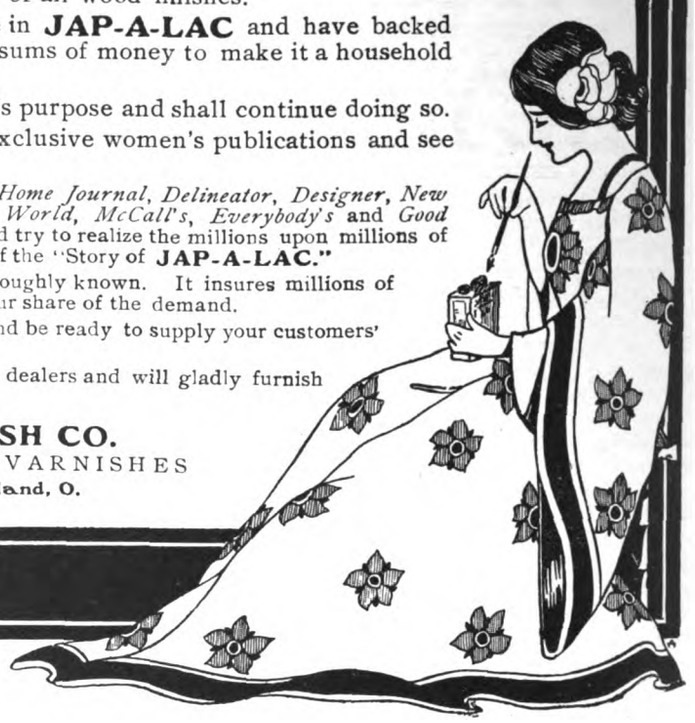
We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.



Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

QUEER JAPANESE CUSTOMS.

The Japanese do many things contrary to European usage.

They talk backwards, the verb coming last, read backwards, and consequently write backwards. Their books begin where ours end, and the word finis is put where we have the title page. Foot-notes, as we call them, are printed at the top of the page, instead of the bottom. In newspapers a large full stop is placed at the beginning of every paragraph.

Men drink wine before dinner, not after. Sweets are also served at the beginning of a dinner. A Japanese mounts a horse on the right side, all parts of the harness are fastened on the right side, and the mane hangs on the left. When stabled a horse is put with his head at the door, where he is fed from a tub.

Japanese boatmen row standing up, and do not take their oars from the water. Boats are hauled up stern first.

On leaving an inn you fee not the waiter who has served you but the proprietor. Women carry babies not in their arms but on their backs.

The address is placed on a letter backwards, thus: "Japan, Tokio, Akasaka district, such-and-such a street, 19 number, Smith John, Mr.," thus putting the general first and the particular afterward, which is characteristically Oriental.

Japanese handle tools differently from other people. Carpenters saw and plane toward, and not away from themselves. Keys turn in instead of out.

The best rooms in a house are at the back; so are the gardens. In building his house the Japanese constructs the roof first, instead of the foundation. In making up accounts the figures are put down first and the items afterward. In sewing a Japanese woman does not thread her needle but needles her thread. The needle is not thrust through the cloth, but is held firmly and the cloth is drawn over it.

On entering your house the Japanese removes his shoes and not his hat. Men always precede women. After a bath the Japanese dries himself with a wet towel, and his bath, if taken to make him rugged, is hot instead of cold, like the Englishman's.

In business the Japanese merchant charges more for an article when ordered in quantity than when only one is ordered. He reasons that a man who wants a dozen things just alike must want them badly, and can afford to pay more than the man who wants only one.

Houses in Japanese streets are not numbered in order, but according to their age. Thus No. 5 may be alongside No. 4999. The jinrikisha men are walking directories, and remember the location of thousands of houses and the names of their owners apparently without difficulty.—*Chamberlain's "Things Japanese."*

DON'T MAKE THE SAME MISTAKE TWICE.

A mistake may be made the keystone of system—the foundation of success. The secret is simple: Don't make the same mistake twice. No difference what the mistake —whether it be the misspelling of a customer's name; an error in your bookkeeping method; an unfulfilled promise—it is a valuable asset in your business if you follow the rule: Don't make the same mistake twice.

Let your mistakes shape your system and your system will prevent further mistakes of the same kinds. When you discover a mistake, sit down then and there and arrange the system to prevent its repetition. You can't afford to make the same mistake twice.

Not only your own mistakes; system will prevent the mistakes of those over you and of those under you. That trebles the value of the mistake that helps to make the system better. But don't make the same mistake twice.

Paint it on your wall; emblazon it on your door; frame it over your desk; say it to your stenographer; think it to yourself; burn it in your brain; this one secret of system, this one essential to success. Don't make the same mistake twice.—*System.*

TRADE NOTES

Superior, Wis.—The Pease-Humphrey Hardware Company has been dissolved. J. G. Pease will remain in Superior and continue the business. He has opened up with a full line of Hardware and sporting goods and will keep the store in an up-to-date manner.

Van Buren, Ark.—T. W. Edmondson has retired from the Allen-Edmondson Hardware Company, and the business will be continued by R. P. Allen.

Waterbury, Conn.—W. V. Barber has purchased the plumbing and Hardware business of A. D. McCarty.

Digitized by Google

STEVENS

FOUR OF THE MOST POPULAR RIFLES ON THE MARKET.

STANDARD OF THE WORLD. HIGHEST IN QUALITY, LOWEST IN PRICE.

SHOWING ACTION OPENED.

"STEVENS-MAYNARD, JR." RIFLE, No. 15

No. 15.—"Stevens-Maynard, Jr." 18-inch half-octagon barrel, walnut stock and forearm, blued steel frame and butt plate, lever acting. Measures 33 inches. Weight, 2¾ pounds. Chambered for .22 short rim fire cartridges. Plain open front and rear sights.....Price $3.00

STEVENS "CRACK SHOT RIFLE," No. 16

No. 16.—"Crack Shot." 20-inch round blued barrel, case hardened frame, oiled walnut stock and forearm, rubber butt plate. Chambered for .22 long-rifle R. F. and .32 short R. F. cartridges. Plain open front and rear sights. Has an automatic kicking ejector. Weight 4 pounds
Price,.....$4.00

STEVENS "FAVORITE" RIFLE, No. 17

The "Favorite" Rifle is a strong and thoroughly made arm, perfect in symmetry, safe and accurate. For this rifle the standard length of barrel is 22 inches; it is octagon to forward end of fore-end, and round the rest of its length. The stock is finely modeled and has a shot-gun butt. The weight of rifle complete is 4½ pounds. The action has a strong case-hardened frame and solid breech-block. The barrel can be easily cleaned from the breech without taking the rifle apart. The same care is taken in boring and rifling the barrels of the "Favorite" as of the high priced rifles. All models of the "Favorite" are made to "take down." The "Favorite" is made for the .22 long rifle, .25 Stevens and .32 long rim fire only. The short, long and conical can be used with good results in rifles chambered for the .22 long rifle cartridges. B. B. caps and short cartridges should never be used in .22 caliber rifled barrels.

No. 17.—Plain open front and rear sights. .22 caliber.....Price, $5.00

STEVENS "LITTLE KRAG" RIFLE, No. 65

OPEN FRONT SIGHT PEEP SIGHT

This rifle in action is similar to the celebrated "Krag" rifle, adopted by the United States government. We believe the popular features of this rifle will especially commend its use among boys. It is very simple in construction, containing only a few parts, and can be easily taken apart.

Has a round 20-inch barrel, blued steel frame, single trigger, oiled walnut stock and forearm, rubber butt plate. For .22 Long Rifle R. F. cartridges. Fitted with bead front and rear peep sights. Weight, 3¼ pounds.....Price, $5.00

The principal office will be in Buffalo. The directors are: James E. Carroll, Richard D. Jones and William C. Carroll, all of this city.

Buffalo, N. Y.—The firm of Jacob G. Shantz & Son Company has been incorporated with a capital of $160,000. The firm will deal in Hardware. The directors are: Dilman B. Shantz, Charles F. Kilhoffer and Samuel F. Moran, all of this city.

Camden, Ala.—The Camden Hardware Company will open a Hardware and furniture business on September 15th. They will carry a full line of Hardware, furniture, stoves, ranges, buggies, wagons, saddlery, harness and in fact everything pertaining to a business of this nature.

Goldsboro, N. C.—The Sutton Hardware Company has been incorporated. Object, sale of Hardware and general merchandise, wholesale and retail. Capital stock, $25,000. Incorporators: Mrs. Henrietta Sutton, Mrs. Mamie E. Griffin, J. R. Griffin, Thos. I. Sutton.

Hartsville. S C.—The Hartsville Supply Co. has been incorporated (Hardware). The capital is $10,000 and the officers are: M. Bonoit, president, and A. W. Welling, secretary and treasurer.

Hope, Ark.—The Hope Hardware Company has been incorporated. It is proposed to do a general Hardware and furniture business. Capital stock, $50.000. The directors are: R. M. Briant, president; L. D. Reed, vice-president; Chas. Wingfield, secretary; R. M. LaGrove, A. L. Black, A. L. Betts, P. A. Thorp.

Kings Mountain, N. C.—The Kings Mountain Hardware Company has been incorporated with $10,000 capital. Incorporators are: C. S. Elam, J. P. Parker and R. F. Elam. The company is authorized to do a general mercantile business.

Los Angeles, Cal.—The McCormick-Irmand Company has been incorporated for $40.000. Directors are: D. Ormand. A. R. McCormick, J. W. Covert, E. L. Holt and J. L. Tummond. The company is formed to do a general Hardware and plumbing business and to develop water, mines, etc.

Marion, Ohio.—Harry A. Ammann has opened a new Hardware store in the newly completed Wiant-Thomas room on Center Street. The store itself is very modern in every respect. It is elegantly lighted and has a high ceiling covered with nicely embossed and decorated steel. The walls are covered with a deep red ingrain paper. The fixtures are all of hardwood and were made especially for Mr. Ammann. In all it is a representative store of Greater Marion. An entirely new stock of Hardware, paints, stoves and kitchen furnishings has been installed.

McPherson, Kan.—The Central Hardware Company has been incorporated; capital, $6,000.

Newport, N. J.—Roscoe Riley and John LaDow have engaged in the grocery and Hardware business.

New York, N. Y.—F. K. Roberts Company has been incorporated; (general Hardware); capital, $20,000. Directors: F. K. Roberts, Forest Hill, N. J., and F. C. Baker and F. B. Maerkle, Brooklyn.

New York, N. Y.—Henry Pearl & Sons Company has been incorporated: door Hardware; capital, $30,000. Directors: Henry Pearl, William Pearl and H. H. Pearl, New York city.

New York, N. Y.—Kurti-Right-Kooper has been incorporated to deal in Hardware; capital, $20,000. Incorporators and directors for the first year: John L. Adam, New Orleans; Russell L. Tarbox, Arthur S. Wily, New York.

Pekin, Ill.—Frank Brown will occupy the building formerly used as post office for a Hardware store when alterations are completed.

Portland, Ore.—The Medal Company has been incorporated by Max Lowenson, George Lowenson and N. L. Safer. Capital stock, $1,500; to deal in groceries, wholesale and retail Hardware, etc.

San Diego, Cal.—The Reed & Wyman Hardware Company has been incorporated. The company has succeeded the Mathies Hardware Company and the articles set forth that it proposes to furnish building materials and Hardware and to do a general jobbing, manufacturing and repairing business in sheet iron, tin, copper and zinc. The company is capitalized at $15,000. The directors and stockholders in the company are: E. Y. Wyman, M. L. Wyman, R. Hubbard, J. H. Reed and Frank P. Reed.

St. Paul, Minn.—Foreign articles of incorporation were filed by the Bennett-Darling Company, of Michigan. The firm sells agricultural implements. The capital stock is $20,000.

Tilden, Neb.—A new Hardware store was opened September 1 by John H. Thomas and Bert Snyder under the firm name of Thomas & Snyder.

Troy, Tenn.—The Troy Hardware and Specialty Company have effected permanent organization by electing Carroll P. Wilson president and treasurer, R. L. Rochelle first vice-president, J. Sam Jones second vice-president, James W. Pressly secretary, and Messrs. J. E. Hall, H. C. Davidson, Paul Ingram, J. Sam Jones, Carroll P. Wilson, R. L. Rochelle, James W. Pressly directors. This company is capitalized at $10,000 and controls the patents of several valuable Hardware specialties, as well as being chartered to conduct a general Hardware business.

Changes.

Bath, Pa.—Frank Messinger, of Nazareth, has bought the Hardware business of T. Moser's Son & Co. He will add stoves and tinware, and carry on the plumbing, heating and repairing business.

Chattanooga, Tenn.—The Hall-Melton Hardware Company has increased its capital stock from $20,000 to $50,000.

Corpus Christi, Texas.—F. P. and Lloyd Clarkson, of this city, have closed a deal for the purchase of the Bluntzer Hardware stock and will assume charge of the business at once.

Fremont, Ohio.—The interests of the Stieff-Billman Co., implement dealers, located on East State Street, was purchased by Messrs. Jas. Dunfee and Chas. Gabel.

Galesburg, Mich.—O. L. Evans has sold his interest in the Evans Hardware store to William A. Elsey. The transfer includes the absolute sale of the Hardware stock and a lease of the Evans building for a period of five years with the privilege of renewing the lease.

Grand Rapids, Mich.—Frank L. Bean, proprietor of the Hardware store at the corner of West Leonard and Scribner Streets, has closed a deal for the sale of his store to Fred Westmaas.

Henderson, Ky.—James B. Norment, who has been with the firm of Norris & Lockett Hardware Company for the past seven years, has recently secured an interest in the firm.

Ironton, Ohio.—The Hardware store of Snyder & Belcher has been sold to the Snyder Hardware Co., jobbers, at Louisa, Ky. They at first thought of continuing the business here but have now decided to close it out in all possible haste.

Marshalltown, Iowa.—A. D. Slocum, of Minburn, has purchased the entire stock of Hardware of S. M. Reiste and has taken possession.

McPherson, Kan.—Ray Dunett has sold his interest in the Hardware store and the new firm will be known as the French Pankratz Hardware Company. Mr. Dunett intends going to Great Bend.

Mt. Pleasant, Ia.—Carden Brothers, of Winfield, are invoicing their stock of implements preparatory to turning them over to Geo. Bloomer, who will conduct the whole line formerly owned by Carden Bros. Mr. Bloomer came to Winfield last spring and purchased the Hardware portion of Carden Brothers' business, which he has conducted since that time. Now he purchases the remaining portion of the business.

Naples, N. Y.—George Bolles has purchased the interest of his brother, J. C. Bolles, in the Hardware store known as John Bolles & Son. J. C. Bolles will be in the employ of the Standard Oil Company.

Nevada, Ia.—Mr. Cade has sold his interest in the Hardware store to E. Horton, who comes from Anamosa, and the business will be continued at the old stand.

Norwark, Ohio.—Ed. M. Blatz, of Sandusky, formerly of this city, and W. J. Beutel, of Cleveland, have purchased the Hardware store of Jacob Arends' Sons, at Sandusky.

Onawa, Ia.—C. A. Thurston, Hardware dealer, has bought the business in the same line owned by Howard Ross. By this purchase both stocks of goods will be consolidated in C. A. Thurston's establishment.

Paducah, Ky.—The Scott Hardware Company, which suffered a total loss by fire, has in its new goods and has gotten all straightened up. Their traveling men are out and orders are coming in rapidly.

Peoria, Ill.—Charles Johnson Hardware Company has increased its capital stock from $20,000 to $30,000.

Talking points sell goods, but if you depend entirely on the power of words to sell doorhangers the chances of sale are much less in your favor than if you had before you a full size display model Bischoff Doorhanger. Then you can indicate its ease of attachment, no cutting of door necessary, its great strength, supporting a weight of 2,200 pounds, and the angle shaped track which prevents clogging from dirt, snow or ice. Your customer sees with his eyes not his ears. It's the practical demonstration of these special features that sells Bischoff Doorhangers.

This piano finished display model doorhanger sent free with one dozen prs. of Bischoff Doorhangers, sent f. o. b. your city for $8.75 per dozen. Track 6½c. per foot.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Alton, Mo.—Charles Beall is erecting a new shovel factory at East Alton.

Atlantic City, N. J.—Myers Manufacturing Company has been incorporated by Clarence A. Myers, Matilda E. Myers, Joseph Nkwotz and John C. Reed. The company is to manufacture and deal in tinware and notions.

Buffalo, N. Y.—The Jacob Y. Shantz & Son Company has been incorporated. Capital stock $160,000, to deal in tailors Hardware. Directors are: Dilman B. Shantz, Charles F. Killhoffer and Samuel F. Moran, of Buffalo.

Chicago, Ill.—John T. Kenter Axle Company, Chicago; capital, $25.000; manufacturing machinery and supplies; John T. Kenter, P. H. Early, H. Doherty.

Coal City, Ill.—B. C. Small Manufacturing Company has been incorporated; capital, $25,000; manufacture farm machinery; incorporators: Byron C. Small, A. W. Tylom and Josiah Rogers.

Columbus, Ohio.—The citizens of Columbus are delighted over the fact that they are going to have a plow factory in their town within the next few weeks. The new firm is the Dodson Plow Company, of Tennessee, which are making preparations to remove their plant and reorganize with a capital stock of $25,000. The factory will also turn out cotton seed planters.

Coshocton, Ohio.—The Coshocton Sign and Novelty Company has been incorporated; $25,000 capital; by J. M. Smith, D. A. Betts, M. W. McNaughton, C. O. Wickens, Frank Brightman and E. M. Brennan.

Danville, Ill.—A company has been incorporated here for the manufacture of refrigerators after a patent secured by Barton Parrish, formerly of this place. The corporation will be known as the Barton Refrigerator Co. It is capitalized at $10,000.

Detroit, Mich.—Edward H. Sutton, Frederick S. Stoepel and Frank E. Robson have organized the National Cutlery Co., which has been incorporated. The capital stock is $15,000.

Dover, Del.—The Chicago Graphite Manufacturing Co. has been incorporated in Illinois. Capital stock $250,000.

Dover, Del.—The Lehigh Valley Spring Company has been incorporated to manufacture and deal in steel and iron springs. The capital stock is $100,000 and the incorporators are Wilmington charter agents.

Indianapolis, Ind.—The Silver Leaf Stove Polish Company has been incorporated with a capital of $5,000. The directors are: Elmir B. Cottingham, John R. Ferguson and Robert Hawkins.

Jacksonville, Ill.—The Economical Stove Co. is a new Jacksonville enterprise, created for the manufacture of an improved stove that has been invented by a Jacksonvillain.

Kansas City, Mo.—Western Wheelbarrow Manufacturing Company has been incorporated; capital stock, $10,000, all paid. Incorporators: James D. Clark, Louisville, Ky.; Thomas G. Dade, A. B. Dade and John Kachmeister.

Marion, Ohio.—The Sutton Broom Corn Harvester Company, with $50,000 capital stock, has been incorporated by Frank Sutton, P. H. Neidig, Thomas P. Watkins, J. F. Lust, C. F. Layman, George L. Malone, U. K. Guthery and T. D. Wogan. The company expects to begin the manufacture of the harvester within a few weeks in the old Huber shops on North State Street. John Titus, an expert machinist, will have full charge of the construction of the machines. Mr. Titus constructed the harvester after the ideas of Mr. Sutton, and when tested it proved satisfactory in every way.

Minneapolis, Minn.—Pond Manufacturing Company has been incorporated; manufacturers of matchholders; capital, $5 000; incorporators: M. E. Hartman, St. Paul; A. Patterson and Merritt G. Pond, Minneapolis.

New York, N. Y.—National Adjustable Bracket Co. has been incorporated. Capital, $150 000, and directors: Gustav Kalm, D. Curtis Harrower and J. J. Kramer, of New York city.

Paducah, Ky.—The tool handle factory of Brake, Givens & Co. has been incorporated. They are located at Sixth and Trimble Streets and will put out 5,000 handles a day. Capital stock, $10.000.

Peoria, Ill.—East Peoria, a suburb of Peoria, has been decided upon as a location for the Peoria Steel and Tool Company plant, which will include the Automatic Vice and Tool Company, of Akron, O., the Farnham Cutlery Company, of Fremont, O., and Bridgeport, Conn., and the Bergram Tool Steel Company, of Pittsburg. Mr Bergram being formerly with Brown Bros. The plant will be in operation in three months. Cutlery, vices, car springs, etc., will be made. Frank E. Farnham, president of the company, is from Chicago. The Peoria Steel and Tool Company has been incorporated with a capital stock of $250,000. Incorporators are: Frank H. Farnham, Ralph N. Bailey and George T. Page.

Reading, Pa.—"The Globe Lawn Mower and Manufacturing Company" is the name of a new concern recently organized. The directors are: A. Lincoln Frame, D. Elmer Dampman, Peter B. Weidner, Harry F. Schroeder and Daniel Madlem, of Reading. The product will be lawn mowers with the patented improved adjustment under U. S. Letters Patent issued to Harry F. Schroeder, in May, 1903.

St. Louis, Mo.—George W. Peter Implement Company has been incorporated; capital stock, $100.000. Incorporators: George W. Peter, J. D. Rippey and Rodney R. Peter.

Wabash, Ind.—The Wabash Stove Company has been incorporated, capital, $10 000 to manufacture a gas stove patented by James Allingham, of Chicago.

Waynesboro, Pa.—Dr. J. H. Koons will build a factory for the manufacture of fly screens, lifting jacks and other novelties.

Wilmington, Del.—The Scranton, Penn., Wrench Manufacturing Company has been incorporated to manufacture tools and machinery of all kinds; capital, $100,000.

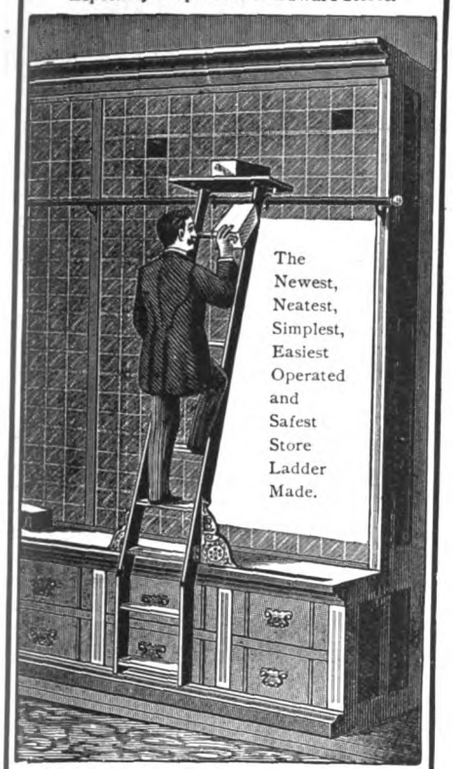
Changes.

Cincinnati, Ohio.—The Wais King Tool Company, of Cincinnati, has changed its name to the King Machine Tool Company.

Danville, Ill.—The building in the rear of the Leonard-Short flats on West North Street, until recently occupied by the handle factory, has been sold by the owners, C. T. Yeomans and W. E. Shedd, to W. U. Coons, the manufacturer of furnaces. Mr. Coons will move his establishment from South Vermilion Street into the factory building and will engage in the manufacture of furnaces on an enlarged scale.

Fultonville, N. Y.—Two members of the White Mop Wringer Company, of Jamaica Vt., were in Fultonville this week negotiating for the purchase of the knitting mill. Should they succeed in purchasing the building and engine, the only part which they desire, they will move the business there. The object in making the change is that they would be nearer the base of supply of the raw material which they use in the manufacture of their goods and a better and more convenient point for supplying their trade with the manufactured article. The business employs twenty to twenty-five hands and would be a desirable one to obtain.

Trenton, N. J.—It is announced that the United States Steel Corporation has bought the wire plant of the Trenton Wire Co. and has paid for it with second mortgage 5 per cent. bonds. The exact price paid has not been officially stated, but the combine interests consider terms very advantageous and it will net not less than 25 per cent. on the purchase price.



Waynesboro, Pa.—The Landis Tool Company will build a new power house, equipping it with a 300 horse power engine and a 200 kilowatt generator.

York City, Pa.—The old foundry of the York Safe and Lock Company will soon be dismantled. On its site will be erected a brick building 160x80 feet in dimensions, an addition to the safe works. It will be one-story high with basement. Architect J. A. Dempwolf is preparing the plans.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Fort Smith, Ark.—The Equitable Powder Company are erecting a plant near here which they hope to have in operation within a few weeks.

Jamestown, N. Y.—A new company has been organized by C. H. Walters, of Springfield, Ohio, George W. Quinlan, of Buffalo, and others. It is the intention to manufacture a number of rubber articles, including bicycle tires, shoe heels and similar goods.

Morrow, Ohio.—The plant of the Senior Powder Company will be in operation about October first.

Newark, N. J.—The Newark (N. J.) Pneumatic Puncture Proof Tire Company has been incorporated. Capital stock $25.000. Incorporators: Henry Willoughby, Jr., John Miller and Edward K. Patterson.

Newcastle, Pa.—The new plant of the Burton Powder Company was started August first. The daily capacity is 300 kegs.

Changes.

Akron, Ohio.—The Mitzel Rubber Company is building a plant at Carrollton, O., to be 40x180 feet in size, giving working space for 100 workmen.

Ashland City, Tenn.—The Sycamore Powder Mills, located near here, have been closed down and all employees discharged. No announcement has been made by the company concerning its action.

Brooklyn, N. Y.—Walter W. Gregory, manufacturing base balls at 66 Lott Street, under the firm name of S. W. Rice & Co., has sold his business to Solomon W. Brock, who will in future conduct the same under the style of S. W. Rice & Co. at the same location.

Cleveland, Ohio.—Contracts have been let for an addition to the plant of the American Ball Bearing Company to be 90x200 feet in dimensions.

Kansas City, Mo.—The Redheffer Hardware Company, capital stock $5 000, have succeeded the Redheffer Company in business, and will carry a full line of sporting goods as well as Hardware.

Middletown, Conn.—An addition to the factory of I. E. Palmer, the manufacturer of hammocks, hammock supports and accessories, is being built. This will be 35x50 feet in size and four stories in height. The large increase in the volume of Mr. Palmer's business has made it necessary to obtain more working space.

Minneapolis, Minn. — The exclusively wholesale house of Nelson-Boquet-Holliday Hardware Company has recently entered the sporting goods trade and is carrying a strong line of fishing tackle and gun goods.

Nevada, Mo.—The William H. Talbot Company, manufacturing fine fishing reels, will within a short time be quartered in a new factory building that has been built during the summer and is now being equipped with special machinery and apparatus for the fabrication of the famous Talbot reels.

New York, N. Y.—Miller, Daniels & Walsh, 93 Reade Street, have dissolved partnership, all of their business now being handled direct by the Miller Manufacturing Company, Peekskill, N. Y., makers of lamps, oilers, tire pumps, brass and aluminum castings, etc.

Plymouth, N. H.—The Draper & Maynard Company, makers of football goods, etc., have purchased the factory of the Connecticut Sporting Goods Company, 123 Railroad Avenue, Bridgeport, Conn., together with the machinery, fixtures and stock. The Connecticut Sporting Goods Company has been dissolved by an agreement among its stockholders, for whom I. H. Klebau was president, Charles Pullan secretary-treasurer, and Abraham Levy manager. It was incorporated in July, 1903, with a capital of $3,000, and it is said in Bridgeport that while its output was not large, the investment paid well and the business was sold at a profit.

Rochester, N. Y.—The After Dinner Gun Company changed the location of its principal place of business from New York city to Rochester. The officers of the company are: President, Allan Scott; secretary, Warren A. Shenkowitz; treasurer, Stephen H. Richards, all of New York city.

14 Thavies Inn, Holborn Circus, London, E. C., Eng.
123 California St., San Francisco, Cal.
Copenhagen (Freeport).

It's the same exactly with

Winslow's Adjustable Face Marking Gauge

Try it once on any irregular surface: Loosen its thumb screws—adjust its face—the work is done.

Most any mechanic or wood worker will see the point—its advantage over others. It saves both time and money.

You could sell lots of them (at a good profit) if you displayed them.

Let's have your trial order.

MOSSBERG WRENCH CO.

Central Falls, R. I.

YOU OUGHT TO SEE IT!

The New Putnam

Ⓦ

Horse Nail

Is made by a new and down-to-date method. It has stood the severest practical tests for six months, and

The Highest Test

for tensile strength, elongation and elastic limit.

The New Putnam will not crimp, break or sliver. Will not cut off; will hold in the clinch. Drives most easily.

These are some of the reasons why you should handle them.

Send for samples. Special Offer to Hardware Dealers.

Bradley SHELF Bracket

For **Ten Years** it has upheld its name and fame for

Extraordinary Strength

that it has ceased to be an experiment with the user.

* * *

Same with the dealer. Most of them know that the Bradley is so well made that it is the stongest cheap Bracket on the market to-day.

It's the best for the every day run of business.

* * *

A most ready seller. Try it and be convinced.

Atlas Mfg. Co.
New Haven, Conn.

We Stand By Our Guarantee

No. 700 Ball-Bearing Screw Driver

From head to point of blade, we guarantee it to be of

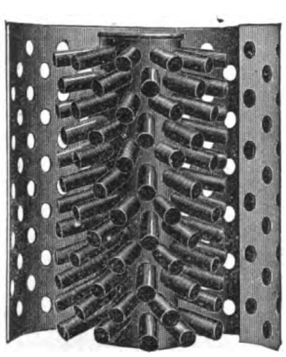
MAYHEW QUALITY WORKMANSHIP AND FINISH

so well known to the trade.

It works like a ratchet driver without causing "ratchet" blisters.

WHY?

Because its head remains stationary in the palm and allows the full strength of the hand and fingers to turn the screw in either direction.



Packed ½ dozen in a box.

Write us.

Mention HARDWARE.

H. H. MAYHEW CO.
Shelburne Falls, Mass.

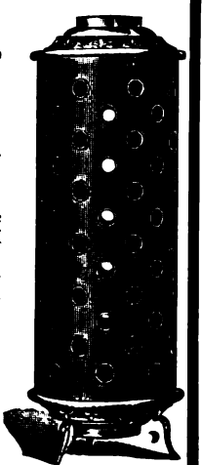
4,866 sq. ins.

SAVE 1-2 YOUR FUEL

BY USING THE

ROCHESTER RADIATOR



IT WILL DO IT

TAKE a common sense view of heating—if you wish to heat a poker you will hold it over the fire, not at the side. We hold 96 to 120 pokers or tubes over the fire, each having a hollow air space in centre through which a current of air rapidly passes, sending the heat to all parts of the room, getting much greater results than any **DRUM** or side heater can give.

Inquiries from your town in answer to our advertising in all the leading Magazines and Family Papers are referred to you when you carry our goods in stock. Thus we sell them to you and then sell them for you.

Over 100,000 of them in use.

Write for Descriptive Catalogue and Prices.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

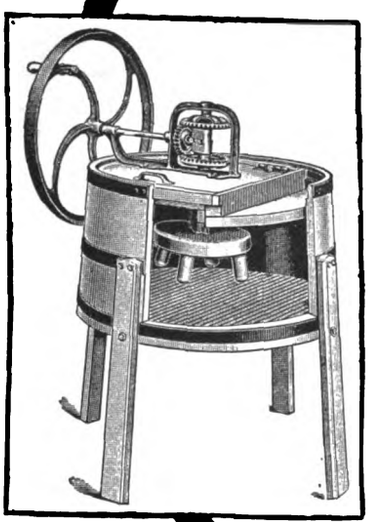
WHY IS THE O.K.

The Best Rotary Washing Machine?

BECAUSE



1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, no escape of steam.

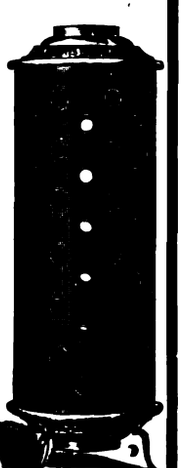
SAVE 1-2 YOUR FUEL

BY USING THE

ROCHESTER RADIATOR



IT WILL DO IT

TAKE a common sense view of heating—if you wish to heat a poker you will hold it over the fire, not at the side. We hold 95 to 120 pokers or tubes over the fire, each having a hollow air space in centre through which a current of air rapidly passes, sending the heat to all parts of the room, getting much greater results than any **DRUM** or side heater can give.

Inquiries from your town in answer to our advertising in all the leading Magazines and Family Papers are referred to you when you carry our goods in stock. Thus we sell them to you and then sell them for you.

Over 100,000 of them in use.

Write for Descriptive Catalogue and Prices.

"Cheer Up and Seven Other Things"

By CHARLES AUSTIN BATES.

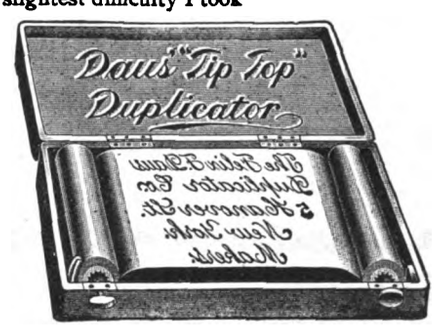
"Charles Austin Bates always wields a vigorous pen, but his latest work "Cheer Up and Seven Other Things," contains eight of the most stirring business talks that have ever appeared over his name.

The titles "Cheer Up," "Making A Front," "Making Good," "Other Peoples Brains," "The Ill Fortunes of Brother Bill," "Things That Can't Be Done," "And All Is Advertising," and "How Shall A Young Man Succeed?" indicate the nature of the book. Rugged, straight-from-the-shoulder common sense is the keynote, yet the vein of humor running through every page makes it wonderfully entertaining.

The head of the firm can read "Cheer Up" with much profit, and every young business man who wants to make his mark will find the book worth many times the price.

"A small volume packed with sharp edged chunks of wisdom. Mr. Bates is an expert writer on advertising and what he does not know about the right way and the wrong way of advertising so as to attract public attention is hardly worth knowing.

"His bright little essays in the volume are all on the subject of advertising or business hints, and business men can hardly fail to profit while being entertained by reading them. Other people will also enjoy the little book for its practical wisdom and the cheerful spirit pervading its pages."—*The Cleveland Plaindealer.*



"In his own way Mr. Bates has the same kind of shrewd humor that made the "Letters From a Self-Made Merchant" so popular, and a good deal of the common sense business morality that marked the equally popular "Letter to Garcia." There are fun and snap in this little book."—*The Outlook*, New York.

HARDWARE

The Stover Mfg. Co., Freeport, Ill., has appealed from a recent decision of Judge Kehlsaat of the United States Circuit Court, in their suit with the Arcade Mfg. Co., of the same address, for infringement on a mop. They have carried the case to the United States Court of Appeals.

NATIONAL HARDWARE ASSOCIATION.

The following houses have affiliated with the association since the last meeting in November, 1903:
Bronson & Townsend Company, New Haven, Conn.
Norvell-Shapleigh Hardware Company, St. Louis, Mo.
Fletcher Hardware Company, Detroit, Mich.
Marshall-Wells Hardware Company, Duluth, Minn.
Freman, King & Co., Ithaca, N. Y.
Kruse Hardware Company, Cincinnati, Ohio.
Benedict, Warren & Davidson, Memphis, Tenn.
Wm. Henry & R. E. Bell Hardware Co., Ft. Worth, Texas.
Bering & Cortes Hardware Company, Houston, Texas.
Ed. A. Hughes & Co., Abilene, Texas.
Nash Hardware Company, Ft. Worth, Texas.
Peden Iron & Steel Company, Houston, Texas.

F. A. BLACK MFG. COMPANY.

The F. A. Black Mfg. Company has been organized at Scottdale, Pa., and has purchased the business of the La Belle Cutlery Company, which F. A. Black has been operating in Allegheny, Pa., for the past six years. The company will erect a new plant at Scottdale, the main building of which will be 75x100 feet in size. The lower floor of the main building will be used for making material and the upper floor for finishing. A second building, two stories high and 45x114 feet, will contain the forge shops, where the blades will be made. The new company will manufacture fine Cutlery and expects to have its plant in operation before January 1. The officers of the company are: F. A. Black, president; Arthur B. Loucks, vice-president; Ralph Loucks, secretary-treasurer, and M. S. Loucks, J. P. Owens, A. J. Geyer and T. W. Porter, directors.

STOWELL MANUFACTURING & FOUNDRY CO.

The Stowell Manufacturing & Foundry Co., of Milwaukee, Wis., has absorbed the Midland Iron Works, of Racine, manufacturers of Wilbern Patent Adjustable Door Hangers. The Midland Iron Works manufactured a complete line of adjustable hangers for barn and factory doors, railway freight house doors, fire door hangers and fixtures and other specialties. R. A. Nourse, secretary of the Midland Iron Works, will be sales manager for the Stowell Manufacturing & Foundry Co. The Stowell Co. have nearly completed their modern office building and are entering upon a progressive campaign on their line of Hay Tools, Barn and Parlor Door Hangers and Side Wall Registers.

CANADIAN WHOLESALE HARDWARE ASSOCIATION SIXTH ANNUAL CONVENTION.

The Sixth Annual Convention of the Canadian Wholesale Hardware Association was held at the Windsor Hotel, Montreal, Canada, on September 7th and 8th, and was a great success. The election of officers resulted as follows:

President—John Bowman, of John Bowman Hardware & Coal Co., London.

Vice-President—Thos. Birkett, M. P., of Thos. Birkett & Sons Co., Ottawa.

Secretary-Treasurer—James Hardy, of Jenkins & Hardy.

Executive Committee—A. Jeannotte, of L. H. Hebert, Montreal; A. Letang, of Letang Hardware Co., Montreal; Gordon Seybold, of the Selhold, Sons Co., Montreal; Victor Lemieux, of N. Lemieux & Fils, Quebec; C. A. Whitwam, the Hobbs Hardware Co., London; Past President Wm. Vallance, of Wood, Vallance & Co., Hamilton; Past President T. H. Newman, Caverhill, Learmont & Co., Montreal; Past President W. Stark, Stark Hardware Co., Montreal; Past President T. B. Lee, Rice, Lewis & Son, Toronto; Past President F. O. Lewis, Lewis Bros. & Co., Montreal; Secretary-Treasurer James Hardy.

This was followed by a banquet, which was held in the Canada Board of Trade Building, which was an unqualified success. Among the guests invited, the following were included from the United States: Samuel A. Bigelow, Bigelow & Dowse, Boston; John C. Koch, John Pritzlaff Hardware Co., Milwaukee; Brace Hayden, Dunham, Carrigan & Hayden Co., San Francisco; T. James Fernley, Philadelphia; J. A. Farrell, U. S. Steel Products Export Co., New York.

DEATH OF SEYMOUR SMITH.

Seymour Smith, of the firm of Seymour Smith & Son, Oakville, Conn., died on September 6th at his residence in the ninetieth year of his age. During the last ten years of his life he suffered from paralysis, and was able to go about the house only in a wheel chair. He was born at South Springfield, Vt., March 29th, 1815, but most of his early life was spent at Uxbridge, Mass., where, at the age of 20, he was employed at the Capron Woolen Mills. In 1840, at the age of 25, he accepted the position of superintendent of the cotton mills at Rogersonville, Mass. About ten years later Mr. Smith removed to Worcester and there started manufacturing light Hardware articles with Daniel Boxton. A few years later he moved the business to Sharon, Conn., and in 1867 he located in Oakville, where he continued his manufacturing enterprise. Some years afterward his son was taken into partnership under the style familiar to the trade. Mr. Smith enjoyed good health until a few weeks ago, and for many years had the satisfaction of seeing the business he had established successfully conducted by his son and grandson.

DEATH OF EDWARD K. TRYON, JR.

Edward K. Tryon, Jr., head of the long-established sporting goods house of Edward K. Tryon, Jr. & Company, died on September 20, in his home at 1931 Race Street, from the effects of a paralytic stroke two weeks ago. He was born in Philadelphia 60 years ago. At an early age he entered the Tryon sporting goods house, which was established in 1811, and at that time conducted by his father, in Sixth Street, above Market Street. He had been in that business ever since. When his father retired many years ago he became the head of the firm. He was active in philanthropic work and was a generous contributor to the Home Missionary Society. He was a member of the Trades League, and also of the First Unitarian Church, in Chestnut Street, near Twenty-second. He is survived by his wife and two children.

DEATH OF ALLEN BOUCHER.

Allen Boucher, secretary and treasurer of the Caldwell Mfg. Co., Rochester, N. Y., died at his home in that city September 13th, after an illness of three weeks. Mr. Boucher was born in North East, Dutchess Co., N. Y., in 1850, and was a brother of James H. Boucher of Mathews & Boucher of Rochester. Allen Boucher went to the latter city in 1883 as an employee of Hamilton & Mathews, the predecessors of Mathews & Boucher. He remained with them about six years as cashier, and then became identified with the Caldwell Mfg. Co., where his Hardware knowledge enabled him to take an active part in successfully establishing the business. Mr. Boucher was held in high esteem by the entire trade for the integrity of his character, his genial qualities and business capacity.

MARSHALL & BRUCE WILL PRINT GRAY & DUDLEY CATALOGUE.

The Gray & Dudley Hardware Company has awarded to the Marshall & Bruce Company, of Nashville, the contract for printing their main and supplemental catalogues.

The significance of this capture by a Nashville house of this contract will be more fully appreciated by well-wishers of home industries and by the general public when it is understood that this great Hardware company to properly set forth the enormous stock carried by its various houses located there and elsewhere will require 3,000 of the main catalogues, each containing 1,500 pages, and 10,000 cuts, and ten supplemental catalogues, containing from 24 to 324 pages each, for use by the different houses and by the traveling men. The main catalogue will be a handsomely bound book, and will be used in connection with the supplemental cuts in supplying gratuitously the patrons of the house.

To have secured such a contract not only with very strong home competition, but in the face of close bids from prominent houses in Chicago and other large cities of the Northwest and East, is quite a triumph, and demonstrates very clearly the perfect ability of this great printing firm to easily handle the largest of orders, requiring the utmost care and skill. The handling of a contract of this kind, the execution of the work in the particular manner required and delivering the goods within the short time stipulated, can only be done by a house equipped with the most modern machinery, specially adapted in every way to meet the requirements of the work.

Evidences, such as these afford, of the prosperous condition of great local houses are indeed cause for congratulation.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The conditions are considered unfavorable for a large trade this Fall, and those who are optimistic enough to look for it will doubtless be disappointed. The markets for raw materials are by no means steady, and heavy buyers are anxious to see some stability in prices and a market promising less fluctuations, before they feel safe in buying their supplies. And yet it is considered better for the trade at large that the quotations should be modified, so that they are nominally near the actual price at which the material is being sold and do not represent a fictitious basis of value to unsettle the market. The dealers have been holding orders back until they feel safe in buying and this conservatism in buying is warranted by the general distrust which has permeated the markets, and the fact that lower quotations in materials did not always affect the prices of the manufactured products.

The Hardware trade in general has known little change in quotations, with the exception of some slight concession to induce an order to keep the wheels moving at the factory, or move an output that was becoming a source of anxiety. But this was not always obtainable, and the failure to get a slight concession when it seemed the natural thing to do, has made the market stronger than ever.

The political conditions, which of themselves create a feeling of doubt and uncertainty, have had an effect to cause a conservatism in buying natural enough under the circumstances and difficult to overcome; but goods have got to be ordered in some volume to meet the demands of current trade, and business has begun to show signs of activity, which bids fair to improve as it advances, and a greater degree of satisfaction is the result.

In Builders' Hardware, a more general movement is noticed and as strikes in the building trades are growing few and far between as Winter approaches, the trend of the demand is sufficiently encouraging to merit approval. On the whole, the trade is growing more active as the season advances, and while the assortment of Builders' Hardware is considered in good condition, it should be in full stocks to meet any demand that may be made upon it.

A good fair trade may be expected from the necessities of Winter, and the current demand for such goods must be met with stocks on hand sufficient to secure and properly fill the early orders. The Harvest is nearly over, and the wheat crop, even if its value is lessened by the rust discovered in some sections, the remainder is in consequence made more valuable on this account, and general conditions of prosperity will follow.

RELATIVE GROWTH OF MANUFACTURES.

The increase in exports of manufactures from the United States during the past year, and especially in recent months, has suggested the preparation of some data by the Department of Commerce and Labor through its Bureau of Statistics regarding the exportation of manufactures from the various countries of the world, and the relative growth in such exports. The value of manufactures exported from the United States in the year just ended exceeds that of any previous year, and during the months of May, June, and July manufactures for the first time in the history of the country exceeded agricultural products in the export trade of the country.

This fact has led the Bureau of Statistics to this study of the relative growth of manufactures in the principal countries of the world which supply the 4 billion dollars' worth of manufactures which enter into the international commerce of the world. The chief countries exporting manufactures at the present time are the United Kingdom, Germany, France, and the United States. These four countries supply about three-fourths of the manufactures entering the international markets of the world, the total exports of manufactures from these countries being, in round terms, 3 billion dollars and the total value of manufactures entering the world's international markets being about 4 billion dollars. A study, however, of the relative growth of manufactures and of exportation of manufactures in these four countries indicates that the United States is making more rapid gains than any other of the group.

The relative growth in the exportation of manufactures is equally striking in its showing of the relative gains made by these four principal manufacturing countries in their supply of the world's market for manufactures. The accompanying table shows the value of manufactures exported from the United Kingdom, Germany, France, and the United States, respectively, in 1880 and the latest available year. It will be seen that the exports of manufactures from the United Kingdom grew from $964,540,000 in 1880 to $1,142,595,000 in 1903, an increase of 18.46 per cent.; France, a growth from $339,186,000 in 1880 to $405,794,000 in 1903, a gain of 19.64 per cent.; Germany, an increase from $460,279,000 in 1880 to $780,926,000 in 1903, an increase of 69.66 per cent.; while the United States shows a growth from $102,856,015 in 1880 to $452,445,629 in 1904, an increase of 339.85 per cent. Not only has the percentage of increase by the United States been greater than any of the other countries named but the actual gain has also been greater. The increase in exports of manufactures from France during the period named has been $66,608,000; from the United Kingdom, $178,055,000; from Germany, $320,647,000; and from the United States, $349,589,614.

Exports of domestic manufactures from the United Kingdom, the United States, Germany, and France, respectively, 1880 to 1903:

Countries.	1880.	1903.	Increase. Total.	Per cent.
United Kingdom.	$964,540,000	$1,142,595,000	$178,055,000	18.46
United States....	102,856,015	*a* 452,445,629	349.589.614	339.85
Germany	460,279,000	780,926.000	320,647.000	69.66
France	339,186,000	405.794,000	66,608.000	19.64

a Fiscal year 1904.

THE PART THE CREDIT MAN PLAYS.

Every business house is like a stage. In a small establishment one man plays many parts, but in a large concern each one has his particular part to play, and the success of the house depends largely upon how well each plays his part. To the debtor, the credit man is the villain in the play or the meanest man in the house. The salesman is the one who makes himself generally agreeable to the trade, tries to win their confidence and secure their orders. He plays his cards to win their friendship. On the other hand, the one looking after credits must look at all questions without sentiment or prejudice, simply taking what cold facts he can gather and weigh them, and then decide accordingly. To the outside world this may seem easy, but we, who have this to do, know how difficult are these decisions. For instance, a traveler sends in an order for a new customer. The report we have is rather favorable. He is a new man, and his success is not yet assured. He has never, perhaps, been in business before, and upon the action taken with this order depends this man's future business. The salesman says he is a nice fellow from all he can learn, and thinks he will surely succeed. Not only are we obliged to know this would-be customer, but we must also know our salesman thoroughly, and make due allowance for the information he gives us. Not that he would misrepresent facts, but he may be one of those optimistic salesmen who thinks every one is all right. It is not necessary for him to think otherwise, and as it is easier to feel kindly toward his customer, he gives him the benefit of any doubt, as he feels he is in no way responsible for his account. We have other men who thoroughly weigh all sides of the question before presenting an opinion, and we can always rely on their judgment. Now, all these things must be taken into consideration, for, if goods are shipped and a loss is made, it shows out in bold figures on the profit and loss account. If the order is turned down and the purchaser offended, and he should afterwards succeed in business, he is a living example of the credit man's mistake, and he will occasionally hear how well this man has succeeded and how he would be buying of his house except for his bad judgment in refusing to give credit. If he is not reminded of the circumstance, the fact nevertheless exists, and he knows it, and, unless he has a level head, the next time the same condition presents itself he may err in the other direction. The mistakes of the credit man are not like those of the doctor, which die with the patient—they are ever before us.

But, on the other hand, when he makes a wise and correct decision, and the one fails to whom he has refused credit, this fact is soon forgotten. The man is out of business, and there is nothing on the books to show that he used good judgment in this case.

The credit man is not a very popular actor on the business stage, as his real worth is only known to his house. But out of business hours, when he is not playing his part in the business drama, this same credit man may be one of the jolliest of men. I am sorry to say, however, that his life has a tendency to make him otherwise, as the part he plays is not altogether rosy. As a general rule, I don't believe that credit men obtain as much information regarding their patrons, from their travelers, as they should. I think it would be time well spent if every one would talk over, with the traveler, every customer on his route in order to post himself as to the character and habits of every debtor on his books.

Unpleasant correspondence seems to fall to the lot of the credit man. It is no easy thing to write the customer that he must pay up his account at once, and at the same time keep his good will and future business. It is hard to dun a man when he is behind and at the same time make him happy. I have observed, however, that the one who makes the least enemies in this sort of work is the man who is outspoken, candid and tells his debtor just what he wants without any equivocations or excuses. If you do not wish to fill an order because the man is now owing you all he should, tell him so, but do not try to deceive him by allowing him to think that you are out of the goods, or cannot fill the order for any other reason than the fact that he is behind and must pay. When you deviate from the plain, straight facts you lengthen the agony, and the debtor has less respect for you when he finds out the truth.

LUCIEN B. HALL.

TRADE IN THE FAR NORTHWEST.

(From Our Regular Correspondent.)

The growth and prosperity of the Seattle Hardware trade is well illustrated by the fact that the two largest Hardware concerns are now erecting new warehouses to better enable them to care for their fast increasing business.

The foundations have just been completed for the Seattle Hardware Co.'s new building. The building is to be thoroughly modern in every way—of brick, stone and iron construction, seven stories high, and occupying nearly half a city block. A siding from the N. P. R. R. will enter the building, so that car shipments can be loaded or unloaded in the warehouse. When completed the new store and warehouse of the Seattle Hardware Co. will be a model, and will enable the concern to better handle its fast increasing jobbing business. Each department of the business will be kept separate, and a large space will be devoted to the sporting goods end of the business; this branch of the Seattle Hardware Co.'s business is growing rapidly under the efficient management of F. S. Clewley, who is one of the best posted gun and rifle men on the coast.

The Schwabacher Hardware Co. will be in their new building by January 1st. This will enable the firm to better care for their fast increasing trade, and to carry a larger stock.

Seattle is growing very rapidly, but at the present time there are more large buildings being erected than at any former time. Not as many small buildings are now going up, although there is a growing demand for houses of all classes.

Among the exclusively retail stores the Thedinga Hardware Co.'s takes first rank. N. H. Thedinga is president, while Fred. W. Thedinga is general manager. Both are practical Hardware men, and devote their entire time to the business. Two large windows on First Avenue are used to good advantage to display Hardware, tools, and sporting goods, in which latter lines the firm does a large retail trade.

Another up-to-date retail hardware house of Seattle is the Holmes Hardware Co., located at 539 Queen Anne Avenue. Much attention is paid to building Hardware as well as household Hardware by the Holmes Hardware Co., and a good business is reported by this concern.

Stores and Tinware is a special line of Wm. M. Curtiss, who has built up a large trade in these goods, catering especially to the popular trade.

Over at 506 Pike Street is located the Hardware and Plumbing store of Ernst Bros., who carry a large line of Furnaces in addition to general Hardware. This concern also does an extensive business in Paints and Oils and find it a very profitable and good paying side line.

All things considered, the Hardware trade of Seattle is in a very satisfactory and strong position. To look at the mercantile ratings of the trade to-day and of fifteen years ago one will at once get some idea of the growth of Seattle's Hardware business. Where then only a few thousand dollars was invested, now over two millions are employed by the Hardware men of Seattle.

The Alaska trade has helped in no little way to build up the Hardware merchants of Seattle. This trade, and the export business to Japan and the East, is constantly growing and is being pushed hard by all the Seattle jobbers.

The Hardware merchants of Tacoma, both wholesale and retail dealers, are without exception doing a very good business, and during the past three years have added noticeably to the lines of goods carried.

One of the most attractive and best stocked retail stores in the city is that of the Washington Hardware Co., which is owned by Cowles & Reynolds—both young men well up in the hardware business. H. D. Cowles is president and E. K. Reynolds is secretary. About two years ago the business was purchased by the present owners, who came from Olympia, where they had succeeded in building up a large retail hardware business. The Olympia store is still operated by Cowles & Reynolds. In the Tacoma store a special feature is made of window display, and during August a very attractive window of sporting goods, with a background of brass goods and fishing tackle, was shown.

The Hunt & Mottet Co. do a large wholesale Hardware business, from Tacoma. In speaking of trade conditions one of the officers said: "Our business is constantly growing and is continually reaching into new territory. Trade outlooks here on the coast are good. Farmers are getting good prices and have large crops, and through the country there is a large amount of small building and fixing up taking place."

Another Tacoma house catering for the wholesale trade is the Henry Mohr Hardware Co. Two salesmen represent this concern on the road, and are building up a good jobbing trade in Western Washington. Theo. Miller is vice-president and is in charge of the purchasing department. The president, Henry Mohr, is well known in the Hardware business, having been in

Digitized by Google

the line for many years. J. A. Plesants is secretary. In addition to the wholesale trade of the Henry Mohr Hardware Co. a very attractive retail store is maintained, a large business in builders' Hardware and Staple goods, as well as Mechanics' and Carpenters' tools, is carried on.

Another of Tacoma's up-to-date Hardware establishments is that of the Palace Hardware Co., of which Sam Olsen is president.

A large retail business is being done by the Honeyman Hardware Co., of Portland, Ore. The retail trade is closely watched, and each year has shown material growth. The store of the Honeyman Hardware Co. is one of the best in the Northwest, if not on the entire coast. Large windows are used to good advantage in displaying the great variety of lines carried, which include paints and oils, tools, mining and logging supplies, cutlery, sporting goods, besides everything in Staple Hardware. The store is situated in the heart of the best retail district, but a large wholesale business is also done.

One of the oldest established Hardware houses in the State is that of the Dayton Hardware Co., of Portland. Mr. Dayton said that during the past few years special attention had been devoted to farm supplies, and machinery, and this branch of the business had been found most satisfactory.

One of the best retail Hardware stores of Portland is that of Avery & Co. Mr. Avery said that business was up to the standard, and that the outlook for Fall and Winter trade was good. Portland is growing rapidly and it is hoped that the exposition in 1905 will bring many people to see the city.

The large warehouse of the Marshall-Wells Hardware Co. is now completed and the firm are pushing the wholesale business of the coast, making all deliveries from the Portland store.

A good retail business is carried on by Kotchman & Hartman, of Portland, which firm make a special bid for the country trade and they pick up city cash business.

"The conditions here in the Northwest are far better than in the East," said one of the large dealers. "At least I should judge so from what the papers say. Both Oregon and Washington are being rapidly settled, with a good class of hardworking people. And it is these ranchmen and farmers and fruit raisers that are making the business, not only for railroads, but for all the jobbers and retailers throughout this country. There are hundreds of thousands of acres of good land yet to be settled, and what we want is still more good settlers. The big future of this country will be not in its mines, nor in its lumber, but in the farm products." HAMMERNAIL.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

Mines—Right of Discovery.

QUESTION: Will you be so kind as to answer the following (under Legal Correspondence) in Hardware: Does the law of the State of Tennessee give the finders of a gold or silver mine on other people's land a one-half interest in the gold or silver? I have been informed by parties who have looked up the law that it does. B. E. T.

REPLY: We could find no law in the State of Tennessee such as you suggest in your question. Under the English Common law mines of gold and silver belonged to the royal prerogative, even though found on the land of an individual proprietor. In New York and several other of the United States, it is held that gold and silver mines belong to the people, while, on the other hand, in California, Georgia and many other States of the Union, the gold and silver are considered as mere incidents to the land and belong to the person who owns the land. But we know of no law in any State which gives a person an interest in the ore found on another's land simply by reason of the fact that he is their discoverer.

Lost Property—Who Entitled Thereto?

QUESTION: A friend of mine while seated in a public restaurant found a card case on the floor containing a considerable sum of money and marked with the initials "E. G. H.," together with a street number in the city of New York. Is my friend entitled to keep the purse and money, or does the owner of the restaurant have the prior right to it? Does my friend incur any liability in keeping it without advertising or making inquiries as to the owner?

REPLY: As between your friend and the keeper of the restaurant, the former has the prior right. It is well settled that the finder of lost property, no matter where the property is found, is entitled to the possession and use of the same against all the world except the rightful owner, but it by no means follows that your friend has the right to retain the money without making efforts to ascertain the owner. The Penal Code of New York and most states provides that a person who finds lost property under circumstances which give him knowledge or means of inquiry as to the true owner, and then appropriates the property without having made every reasonable effort to find the owner and restore it to him, is guilty of larceny. Inasmuch as this card case was marked so that inquiry as to its ownership would be not only practicable but easy, it follows that a retention of the property without making such inquiry would be criminal. The case would be different if there were nothing to apprise the finder of the owner's identity; but in either case the finder would have no right to retain the property after the true owner was discovered and it was claimed and identified by him.

Manufactured Article—When Title Passes.

QUESTION: A manufacturing company contracted to make a machine for us at an agreed price of $1,500, we to pay $1,000 down and $500 when the machine was delivered. The machine is partly completed and they have gone into bankruptcy. The receiver refuses to complete the machine or give it to us as it stands. Have we a right to the machine? The company is hopelessly insolvent.

REPLY: The answer to your question depends on who has the title to the partially completed machine. If you have the title and have performed your part of the contract you will be able to recover it from the receiver; but unless it is distinctly provided otherwise in the contract, the rule of law is well settled that the title of an article to be manufactured does not pass until its completion and acceptance by the buyer. The fact that you have paid a thousand dollars on account does not give you title to the partially completed machine in the absence of a distinct agreement to that effect. If there was no such agreement your only remedy is to prove your claim for a thousand dollars against the bankrupt estate and share with the other unsecured creditors in the distribution of its assets.

Bill of Lading—Right of Stoppage in Transit.

QUESTION: "X," living in New York, sold goods to "Y," living in Chicago, and billed the same to "Y's" order. While the goods were en route "Y" endorsed the bill of lading and sold the goods to a firm in Denver, and at once became insolvent. As soon as the shipper learned of the insolvency of the buyer and before the goods had actually reached Chicago, he notified the railroad company not to deliver them. Is the company liable for making delivery?

REPLY: The Railroad Company is not liable. While the shipper has always the right to stop goods in transit on learning of the buyer's insolvency, that right is defeated by the purchase of the goods and a transfer of the bill of lading to a bona fide purchaser for value during the transit. There being no right to stop the goods in transit it follows that the shipper cannot hold the Railroad Company liable for failure to obey his order. All danger of this kind is prevented if the shipper takes the precaution to make the goods deliverable to his own order.

AMERICAN HARDWARE MANUFACTURERS' ASSOCIATION.

F. D. Mitchell, secretary-treasurer of the American Hardware Manufacturers' Association, has sent out the following call to the members:

"The annual meetings of the American Hardware Manufacturers Association and the National Hardware Association will be held at Atlantic City, N. J., November 16, 17, 18, 1904, with manufacturers' headquarters at the St. Charles Hotel and headquarters for the jobbers at the Hotel Rudolf.

Special hotel rates have been arranged as follows:

St. Charles: $3.50, $4 and $5; for private bath, $2 per day extra will be charged to the room or suite, irrespective of the number of persons occupying such apartments.

Rudolf: $3 and $4; for private bath $1 will be charged to each person occupying connecting room or suite.

The St. Charles is located on the "Boardwalk," directly opposite the Rudolf; its bath rooms are of Italian marble, with hot and cold fresh and sea water, and each has inter-communicating long distance Bell telephones. All drinking water is supplied from its artesian well: hotel heated by the vacuum system, and its cuisine and general service is first class.

Both hotels have been preempted for this occasion with a view to securing to the members of both associations the more desirable rooms. Applications for accommodations in the Rudolf should be addressed to T. James Fernley, 505 Commerce Street, Philadelphia, Pa., and requests for reservations at the St. Charles should be addressed to that hotel direct.

At our joint convention with the National Hardware Association November last the Rudolf was filled, and many delegates were obliged to seek other quarters; our membership has been largely increased during the past year and the attendance in November will undoubtedly tax the capacity of both hotels. The writer finds that nine reservations have already been made with the St. Charles and as usual urges the expediency of making early reservations.

On or before November 1 a card showing number of room and rate per day and signed by its management will be mailed to those who have reserved accommodations at the St. Charles. This card should be retained until you settle your bill with the hotel. Should anything prevent your attendance such reservation may be canceled at any time prior to November 11."

RECENT TRADE PUBLICATIONS.

E. E. SOUTHERN IRON CO., 2206 No. Second Street, St. Louis, Mo., have recently issued their "Ceiling Catalogue," No. 14, illustrating the different styles and patterns of their ceilings. They offer, if furnished with a sketch of most any size, showing size and shape of the ceiling to be covered, to furnish blue print drawings that will give an accurate idea of the finished appearance of the job. They request that sketch show all openings or breaks in the ceiling, such as skylight openings, chimney abutments, etc. It usually takes a few days to prepare a neat drawing of this kind. In all cases they should know the height of the room and the distance from the ceiling to the top of window or door casings. If you have no choice of designs, they will select something suitable for your room. When a job of ceiling is furnished they will send all the material as originally quoted, and if additional material is wanted it will be at the cost of the purchaser, and treated as an extra. List prices are given in their catalogue, which are for steel primed white both sides, coated for shipment. A lump price for all the material required to finish a room will be given parties sending them exact measurements of space to be covered, and with which they will furnish a drawing free of charge, showing the combination design. Send for one of the above mentioned books.

TOWER & LYON CO., 95 Chambers Street, New York City, have distributed to the trade a very unique folder, showing a picture of Uncle Sam, which, when unfolded, causes Uncle Sam to take off his hat. Upon opening the folder you read "Impressed by his power, productiveness, commerce and manufactures, the World takes off Its Hat to Uncle Sam. Impressed by the great superiority in style and finish, and their general efficiency and durability, Uncle Sam takes off his Hat to Chapin's Improved Patent Iron Planes." They claim they are "one better" than any other make on the market, simple in construction, easily adjusted, very strong and durable, and made of the very best grade of materials, with cutting bits finely tempered. Prices reasonable. Send for prices and details.

JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J., are the authors of a treatise on "Oil vs. Grease" lubrication, in which they set forth the special advantages of Dixon's Graphite Greases. They consider the lubrication of a shaft journal—the shaft revolving in an ordinary box, assuming that the function of the lubricant is to keep the surface of the shaft from coming in contact with that of the box. The argument brings out many good points which would be found of much value to those interested. Dixon's graphite greases, they claim, are not affected by climatic influences, and will never become rancid or gum. They are very largely mineral products, and on account of their graphite contents can be used much softer than other greases. The cup greases are efficient through great ranges of temperature without change of consistency. They lubricate like oils, and impart a wonderful smoothness and polish to all surfaces, therefore they assure remarkably low friction. They absolutely prevent "sizing" and cutting of rubbing surfaces, and never fail to cure hot bearings and to prevent further overheating. The Joseph Dixon Crucible Co. will gladly furnish, free of charge, samples of their graphite greases, sufficient for trial or test. They will also be glad to send upon request a copy of the above mentioned book. Send for one.

P. FORG, No. 50 Park Street, Somerville, Mass., under date of April, 1904, have issued an illustrated catalogue and price list, intended for general distribution among the trade. This firm makes door springs, glass frame hinges, flush bolts, corner bolts, barrel bolts, tool racks, bedstead fastenings, door catches, knobs, valve wheels, etc., etc They enclose with their catalogue a pamphlet catalogue devoted to exploiting their Electric Light Fixtures, which they make in four styles. No. 1 and 2 are designed for mills, factories, designing rooms, etc. They are constructed on the ball and socket principle, enclosed in a plate to be secured to the ceiling, and a tube, around which is coiled a spring; the tube is provided at one end with a binding screw, by means of which it is attached to the ball in the ceiling plate, and at the opposite end with a sliding rod, which can be drawn out or pushed back into the tube at will. The ball in the ceiling plate permits the fixture to swing to any desired position, where it can be quickly secured by a half turn of the wheel (or handle) near the end of the sliding rod. No. 3 embraces the same principle and is attached to the side wall, and No. 4 is designed for a desk top. Nos. 1, 2 and 3 are finished nickel plated, and No. 4 in brass, and all styles can be made in lengths as desired. Send for one of their catalogues describing fully their entire line of goods.

W. L. Strock, Bethlehem, Pa., has sent us a copy of their latest catalogue, which is a large one, in pamphlet form, exploiting the goods which they manufacture, which includes axe, adze, pick, sledge, hatchet and hammer handles, also mining and farming tool handles of all descriptions; wood door knobs and stops; file and chisel handles, and special novelties of wood turning, all of which are illustrated, and illustrations are accompanied by list prices. The company invite inquiries for prices on their special goods, which include everything special in the nature of Handles. They call especial attention to their hickory handles, which they have steadily put on the market for the last twenty years. Owing to their standard styles and high polish, they claim that they are pronounced to be the best on the market. They are strictly all seasoned handles, and will therefore not warp. They state that in variety turning (which they are manufacturing very extensively) they are equipped and in splendid position to fully take care of the rapidly increasing trade in this line. They endeavor at all times to keep on hand a complete stock, and their customers may rely on having their orders satisfactorily and promptly filled. Write to the above address for a copy of their catalogue.

THE SCHILL BROTHERS COMPANY, Crestline, Ohio, are the authors of a very attractive catalogue, exploiting their extensive line of Schill Furnaces, among which are The New Idea, the Schill and Schill's O. K. Warm Air Furnaces, which they claim embody the most practical and economical device for heating dwellings, churches and public buildings ever invented. They are adapted for hard and soft coal, wood and gas. In describing their Furnace, the company call especial attention to the fire pot upon which, they state, everything else in a furnace depends. Their fire pot is a double one, consisting of an inner heavy cast iron pot, with a series of openings near center and large openings at top; this heavy cast iron pot is surrounded by a steel jacket, forming an air heating chamber, into which air is admitted and heated before entering into fuel and above it, thus supplying the fire with heated air, enabling them to accomplish, they claim, what all others have failed in, and consume fully ninety per cent. of the gases and smoke heretofore wasted. Each part is taken separately and a most comprehensive description is given.

THE LAWRENCE MANUFACTURING COMPANY, Buffalo, N. Y., makers of Lawrence Gas Stoves, issue an attractive pamphlet catalogue, illustrative and descriptive, of their products. They state that in the exclusive manufacture of gas stoves and appliances, it has always been their high aim to make the most economical goods possible. They claim that during past years actual tests have proven their stoves to be most economical, efficient, sanitary and durable. Their Triplex Heaters have now been tested by the trade for four years, and they state they have never, up to date, been asked for repairs for any of their fuel stoves, and it is their opinion that there is not another stove of this class which can show such a creditable record. They will gladly forward samples to new trade, allowing freight and subject to return if desired. They urge competitive tests. The Triplex combines the three systems of heating, viz.: Radiation, circulation and reflection. The fact that these systems are carried out more completely in the Triplex than in any other heater, they claim, places it far in advance of all competitors. The burners are of the drilled type, cast in one solid piece (guaranteed not to warp), supplied with adjustable air mixers, operated by wood handle valves of the highest class, and are buried with porous gas fuel, which becomes highly incandescent when the stove is in operation, giving the appearance of a coal fire. Their method of construction has entirely overcome the intense heat back of and directly under the stove, also warping of grates, burners and door frames. Send for one of their catalogues and learn all about their Triplex system.

NEW GOODS AND SPECIALTIES.

"YANKEE" AUTOMATIC DRILL, No. 44, WITH ADJUSTABLE TENSION.

North Bros. Mfg. Co., Philadelphia, Pa., are placing upon the market the "Yankee" Automatic Drill, No. 44, with adjustable tension. Of all the automatic or hand drills in the market up to the present time there has never been one that has been entirely satisfactory for general use. The trouble has been that

FIG. 1. YANKEE AUTOMATIC DRILL, NO. 44.

no one strength of spring in these tools would be satisfactory in both soft and hard woods, or for the large and small drills furnished with the tool. The best that could be done was to use a spring of average strength. In this new Drill No. 44 this difficulty has been overcome by a device to adjust the tension of

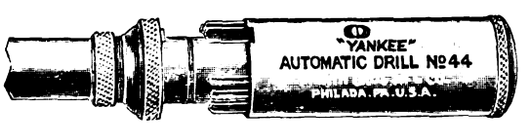

FIG. 2. DRILL POINT MAGAZINE.

spring, making it weaker or stronger, according to requirement of character of wood to be drilled and size of drill to be used. The cap on top of Drill has a screw attached to it, by revolving which the spring is made longer or shorter, thereby making the spring weaker or stronger. The spring is held at desired tension by a small bolt or lock which engages in the cap and is operated by a small knob on side of handle. To adjust the spring pull down the bolt on side of handle, turn the cap on end of handle to the right for heavier tension for hard wood or larger drills, or to the left for lighter tension for soft woods or smaller drills. Turn cap to position so the bolt enters opening in cap, to hold it from turning while using the tool. To open magazine in handle containing the drill points, hold the Drill with the chuck end up, and unscrew nut above handle, and all the drill points will be in sight, thus enabling the user to quickly select and remove drill point required. To insert the drill points, hold the Drill with chuck end up, turning sleeve on same to right as far as it will go. Insert drill point so it catches at bottom of chuck and will not turn, then turn sleeve to left until drill point is held solid. The tool is nickel plated and finely finished. The material and workmanship throughout are of the best.

Eight drill points are furnished with each tool, one each 1-16, 5-64, 3-32, 7-64, 1-8, 9-64, 5-32, 11-64 in.

The entire length of tool, inclusive of drill point, as in illustration, is 11¼ inches.

IVES' WINDOW VENTILATING LOCK.

The H. B. Ives Company, New Haven, Conn.; John H. Graham & Co., 113 Chambers Street, New York selling agents, are placing upon the market the Ives window ventilating lock, as shown in the accompanying illustrations. Fig. 1 illustrates the

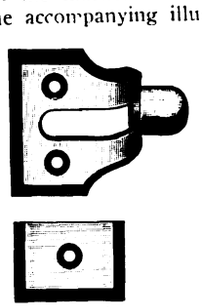

FIG. 1. IVES' WINDOW VENTILATING LOCK.

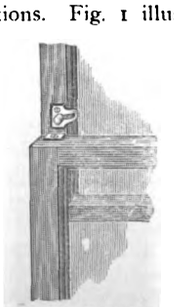

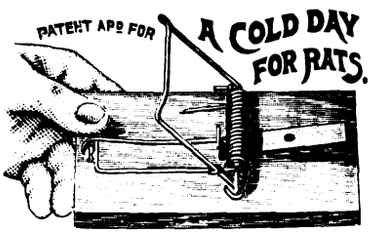

FIG. 2. UPPER SASH DOWN 6 INCHES.

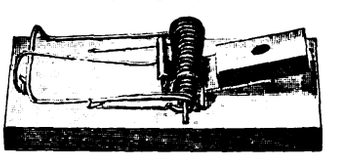
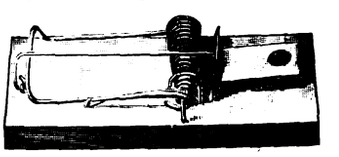
adjustable lock device, which is placed on the upper sash. Fig. 2 represents the sliding pin brought forward so as to permit the upper sash in sleeping or other rooms being lowered to the proper point for ventilation, according as this part is put on the sash, and yet leave the window securely locked. The lock is shown so placed as to allow the upper sash to be lowered about six inches. It is a simple device that requires neither mortising nor the boring of holes to apply it, being fastened by screws in the ordinary way. These locks are made in plain iron, bronzed and electro copper plated, antique finishes; also plain iron, polished, both Bower-Barffed and electro copper plated, antique finish. For finer grades they can be obtained in plain bronze metal, either highly polished or antique copper finish.



POPULAR LINE OF MOUSE TRAPS.

Among the many specialties made by J. M. Mast & Co., Lititz, Pa., they make a line of Traps which have achieved great success suitable for the destruction of rats and mice and are popular with the trade.



BLIZZARD NO. 1.

The chief superiority of this trap is the ease with which it is set, safety to the fingers while adjusting it, and substantial construction. Do not take hold of the jaw or striker, but use the movable lever on top to raise and fasten the striker in position, as shown in the cut; or pass locking bar over both lever and striker and set like old style spring traps.

OLD NICK NO. 2.

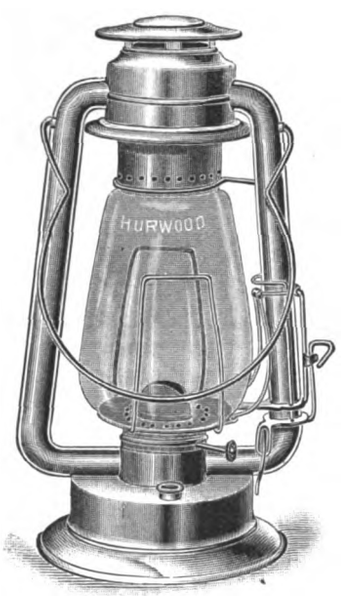
This trap has tough wood base and stronger spring and heavier wires than any other trap made except Blizzard No. 1.

THE JOKER TRAP.

The trigger is metal, so made that it holds a good sized bait, which the animal pushes when reaching for the bait. This constitutes the Joke. Send for circulars of above traps for further particulars.

HURWOOD'S LANTERNS.

A very complete line of lanterns has recenly been placed on the market by the Hurwood Mfg. Co., of Bridgeport, a firm already famous for the quality of its tools. Among the styles made by this firm are the following: Tubular Bishop, Cold Blast Bishop (illustrated herewith), Dash, Search Light and Little Bishop Cold Blast. Tubular No. 0 and 2, and Cold Blast No. 1 and 2. The patent attachment for lifting and swinging the globe out of place does away with the annoyance attendant in filling, lighting and trimming of the old styles, and cannot fail to please all users of lanterns. The device is so simple that a child can raise and



Digitized by Google

swing the globe out from the frame in less than a second of time, by pressing the side lever with the forefinger. The globe

TUBULAR BISHOP LANTERN.

may be removed easily when it is desired to clean it, and can be replaced with as little effort. An attachment has been added

COLD BLACK BISHOP LANTERN.

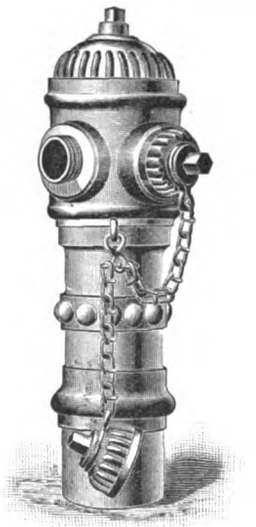
for keeping the bail in a vertical position, unless turned down. Another and very important improvement provides a clear, white flame and makes it wind and jar proof.

EUREKA HYDRANT CHAINS.

Oneida Community, Kenwood, N. Y., and 395 Broadway, New

FIG. 1. EUREKA HYDRANT CHAINS.

York, are manufacturing the hydrant chains shown herewith. The stock carried by the company comprises various sizes to correspond with the different makes of hydrants, and each is fitted with the company's new S-hook attachments. The hook



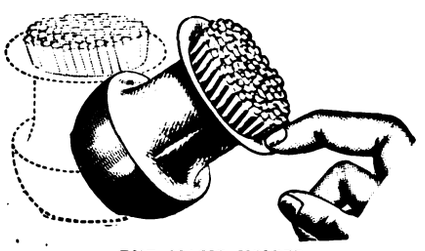


FIG. 2. APPLICATION OF HYDRANT CHAINS.

acts as a swivel on the hydrant cap, and is easily attached.

THE MAGIC HOLDER.

Sidney Shepard & Co., Buffalo, N. Y., and 21 Cliff Street, New York, are calling the attention of the Hardware trade to "The Magic Holder," which we illustrate herewith, which is a novel

THE MAGIC HOLDER.

device for holding matches or toothpicks. It is made of polished Aluminum, and in use when knocked over quickly adjusts itself. The holders are about twice the size of the cut, packed one dozen in a cardboard box, with an attractive display card in each box.

THE "ACME" HOLDER.

A specialty that should meet with a good sale among housewives is the "Acme" Dust Pan and Broom Holder, which we illustrate herewith, and which is manufactured by the E. E. Josef Co., Washington and Perry Street, Buffalo, N. Y. It consists of two small castings, one being secured to the wall by a screw,

"ACME" BROOM AND DUST PAN HOLDER.

and the other part of the device swings up and down. The latter is in the form of a half circle, and the broom handle placed within it is held at any desired height. At the outer end of the swinging arm is a projection on which can be hung the dust pan. The device is simple, compact and retails at a popular price.

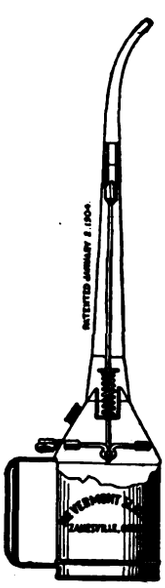
STAR SAFETY CORN RAZOR.

An exceedingly handy specialty is being placed on the market by Kampfe Bros., 8-12 Reade Street, New York, in their Star Safety Corn Razor which we illustrate herewith, one of the cuts

STAR SAFETY CORN RAZOR.

showing the razor ready for use, the other with the guard thrown back for sharpening. In their sheet of instructions for using this razor, the manufacturers say that the razor is to be applied to the corn at the same angle as the common razor so that both guard and edge of blade are resting on the corn, thus



WITH GUARD RAISED FOR SHARPENING.

enabling the shaver to shave off the calloused skin or corn without injuring the foot. This specialty retails at $1.50. They are packed 12 in a glass case, six of which are shown in the upper part, the remaining six being inside the case along with half a dozen leather pockets. This case is given free of charge with each first order.

THE VERMONT SAFETY OIL CAN.

"Vermont Safety Oil Can" is claimed to be the most successful can now in use. This new patent hand oiler is especially adapted for the use of railroad companies, manufacturing establishments, and wherever machinery is used. The mechanical construction of this can, which we illustrate herewith, is such that by a simple thumb pressure the flow of oil is regulated, and can be

THE VERMONT SAFETY OIL CAN.

gauged to a drop, thus placing the lubricant where needed, doing away with all waste and effecting a great saving in oil. Especial attention is called to the compression springs, found only in the Vermont can. These springs cannot be strained or broken, and will outlast any can. These oilers are of tin, brass and copper, in several sizes, with bent and straight spouts of various lengths, and are manufactured by the Vermont Slate Co., Zanesville, O.

RURAL MAIL BOXES.

The Smith Cream Separator Company, of Indianapolis, Ind., who are manufacturers of the well known Smith Cream Separator and Oil and Gasoline tanks, have recently placed on the market three styles of Mail Boxes, the National, with round body, the Eureka, with half round body and the Standard with square body. They are already supplying the trade with these goods and they say that consumers report them to be giving the best of satisfaction. The National Mail Box in particular is a strictly up-to-date affair. It is equipped with the Smith patent flag signal a very simple device, which is raised automatically

NATIONAL MAIL BOXES.

when the carrier lifts the cover to drop in the mail and remains in that position until lowered after the mail has been removed. This box is also equipped with an automatic brass spring hasp

STANDARD MAIL BOX.

for the door, which being mostly concealed on the inside of the box, is protected from the weather, and which holds the door with absolute firmness. This box which has been approved by the Post Master General, is strictly water tight and weather proof, being made extra heavy of galvanized sheet steel, over which is put a heavy coat of aluminum. The box is seven by eighteen inches in size.

BULK MAILING.

At the last session of the Congress amendments to the postal laws were enacted so that catalogues, samples, etc., could be mailed in quantities and the postage paid without affixing a stamp to each one. This is designed to relieve those firms that send out a great number of small pieces of fourth-class matter inasmuch as they will not have to put a stamp on each one, but pay the postage in a lump sum. The measure has not yet gone into effect, but is expected to as soon as the proper regulations are framed by the Postmaster-General. It was found that there was no way to check up the postmasters in this kind of a transaction so that the patron of the office and the postmaster might easily keep out a part of the postage due on a lot of merchandise and divide it up without the department's being able to find it out.

To prevent this it is probable that some way of checking up this matter will be inaugurated.

Matter of this kind is not weighed and paid for in bulk, however. A single piece is weighed, and if the postage on it is one cent every similar piece must pay one cent. That is, a thousand pieces of mail matter weighing half an ounce apiece must pay $10, notwithstanding the fact that their total weight is only 500 ounces. In this the law differs from the method of paying postage on third-class matter, which is by the pound, regardless of the weight of an individual piece.

PRACTICAL HINTS ON ADVERTISING

By Charles Austin Bates.

Be sincere.

Show people that you really mean every word you put in your ads. Tell them the truth and make them realize that you are telling the truth.

This sounds easy, but it is the hardest thing in the world for some people. They can't get down to plain facts. They simply can't tell people just what they offer and why it is so good, and why the price is so reasonable.

Their first effort is to get as far away from plain facts as possible. In their skyward flight they hit upon what seems a clever catch-phrase—generally some mysterious puzzle known only to the advertiser—and use it for the heading. Then they start a long-winded introduction, ringing in a lot of long, high-sounding words. Finally, when the fatal moment cannot be put off any longer, the goods are dragged in by the ears in a shame-faced, apologetic manner. The introduction has taken up most of the ad, so the advertiser winds up with a few meaningless generalities about the goods.

The best way is to forget about the introduction and start right in as if you had your customer backed up against the wall and were trying to convince him that he ought to buy your goods. Tell where they come from, who makes them and how, tell why you can offer such goods at such prices, and give their uses and advantages.

Remember that people are vitally interested in store news.

They are constantly scanning the papers for a chance to get something new and desirable at a moderate price. If you repulse them with a pedantic introduction, you can't expect them to get wildly enthusiastic over your goods.

It is the man who jumps right in and tells what he has and all about it—and stops when he is through—who has to hire a surgeon to care for those who are injured in the crush trying to get inside his store.

Your customers are interested in your goods more than you—they are not taking you home to eat, or to wear around their necks, or to read.

Then why fill up so much of your ad with talk about yourself?

What is the use of talking about your long experience and high reputation and the promises that you have fulfilled? This sort of talk is all right if not carried to extremes, but some advertisers imagine that the public is so breathlessly interested in them that it would be a mean deprivation to talk about anything else.

These advertisers are forever publishing pictures of themselves and making their name the biggest thing in the ad. They are fond of such headlines as: "I Challenge!" "I Said It Two Months Ago and I Say It Still;" "With This Stunning Blow I Silence My Competitors," and so on *ad nauseam*.

Of course, Mr. Munyon and Mr. Swoboda and Mr. Ostrander have made a big success by persistently pushing their personalities, but they did not do so at the expense of the goods they offer for sale.

As a rule, the firm name ought to be set in very modest type. Personally, I think it ought to be the very smallest thing in the ad.

Everybody has heard of Dr. Shoop, of Racine, Wis.—yet Dr. Shoop's name and address are generally set in nonpareil or six point type, and nothing else in the ad is set smaller than eight point.

Just forget for a little while that such a person as yourself ever existed, and see how much you can increase the pulling power of your ads by confining yourself to meaty descriptions and prices of your goods.

Do you ever "go on the warpath?"

Do you ever "let the price-ax fall with relentless stroke?"

Do you ever suppose that people imagine you are going through your stock decked out in Comanche Indian style, tomahawking price cards and cutting values to smithereens?

Then why do you put such truck into your ads?

A cut-price sale is a mighty interesting thing all by itself,

and it is bound to increase business at any time or place—unless such sales are notoriously chronic with your store—but for some unknown reason advertisers in general feel that they must put on a lot of extra dog and completely smother the real facts of the sale in the spludge they make about it.

They search for a top-heavy name. Usually it is a "Challenge Sale" or a "Manufacturers' Outlet Sale" or any one of a number of names in which people seldom take any stock.

Then there is a blare of trumpets and a lot of stuff about

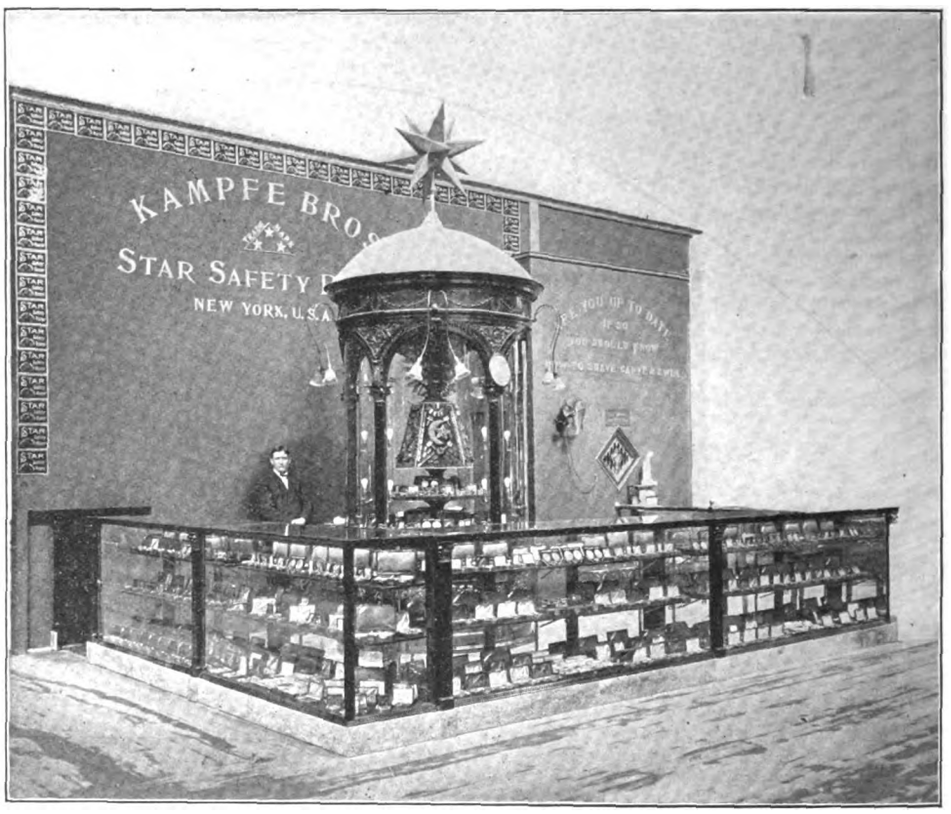
"this marvelous merchandizing opportunity," and "never before in the history of Plunktown have such matchless values been presented." An attempt is also made to prove that the sale will go down in history, as the greatest ever, and nothing but the "untiring energy" of Black Bros. could have ever scoured the world's markets so effectively.

Now, most people have grown out of the childish faith with which they used to receive such announcements, and the merchant of to-day must cut out all the dead wood and put things on a hard business basis if he expects people to believe that his sale has real reasons for existence.

He must be frank with them. If he needs the money, he can easily say so in such a way as not to give the impression that he is broke. He may need it for enlargements, repairs, next season's stock, or any other plausible reason.

It may be that the goods cannot be carried over till next season. In this case, point out that there will probably be little changes in style next season, and while broken lots are offered it is well to take advantage of the big savings made possible in this sale.

If there is anything really the matter with the goods—if they are out of date, damaged, seconds, or shopworn—don't hesitate



Digitized by Google

to say so. People will come to look upon your ads as perfectly truthful—and a reputation for honesty is the best asset you can possibly have.

As a matter of fact, most people look upon bargain offerings with suspicion anyway, so if you anticipate their fears they will feel that they already know the worst and they cannot help getting good value at the low price quoted. Otherwise they might stay away and wonder why you can expect people to believe you are offering such and such goods in perfect condition at such ridiculous prices.

STAR SAFETY RAZOR EXHIBIT.

An exceptionally handsome exhibit at the World's Fair, St. Louis, is that of Kampfe Brothers, whose main office is at No. 8 Reade Street, New York, and whose exhibit, which we illustrate herewith, is located in Block 11 B, in the Manufacturers' Building. The illustration shows very plainly the details of the booth, as the goods of the Star Razor can be seen both in the show windows and tower, with the well-known trade mark on its top. The place is well lighted and is dressed in an exceedingly artistic manner.

STAR SAFETY RAZOR EXHIBIT.

THE SMALL ADVERTISER.

"I'm too small to advertise in the daily papers," the retailer in cities says. "My ad would be lost and, besides, the papers are read by too many people who live out of reach of my store."

Now, while I am willing, says a writer in *Printers Ink*, to admit that this oft-cited reason for not using newspaper advertising is a good one in thousands of cases, I am also certain that in thousands more it is quite untrue, and the small merchant who advances it does not *know* by actual test of newspaper advertising that it will not pay *him*. He merely repeats a theory that he has got into the way of believing. No man can definitely affirm that newspaper advertising will not help his business until he has tried it. S. S. Rogers, of the *Chicago Daily News*, says that in that paper are carried year after year small ads appearing too infrequently to get anything in the way of position—though the largest ad gets nothing in the way of special place in the Chicago *News*, for that matter. To the casual eye such ads would appear to be hopelessly lost. Yet they pay. The *Philadelphia Bulletin* carries 750 small advertisers on its books, and undertakes to make newspaper publicity profitable to the merchant whose annual gross turn-over is as small as $10,000. Philadelphia is the third largest city in this country, and Chicago is the second. In view of these facts, the small merchant who says that newspaper advertising is not for him is, ninety times in the hundred, speaking wholly without real knowledge. To make such a statement year after year without ever putting it to an actual test is to be unfair to the local newspaper, and to be even more unfair to one's own interests.

* * *

It doesn't make any difference how many people live outside the radius of the store. Those who live *inside* are important. If the retailer two miles from the center of town has 10,000 to 25,000 people living within ten blocks of his front door, that is a clientele worth cultivating. One of the evening papers in the city reaches this clientele, and announcements even as small as two inches twice a week will interest them. They may not respond quickly. The point is to keep on until the little Tuesday and Friday ad has become as much a feature of the paper to people in that store's clientele as the page announcement of the Department Store downtown.

* * *

The store paper is a productive method of advertising for a small retailer if published regularly and well circulated in his own neighborhood. Or, rather, a *good* store paper is productive. There are not very many really live store papers, most of the specimens that come to light being simply circulars. But even they pay so well that they can be published regularly, for they quote plenty of prices. The price doesn't tell the whole story about such a complex stock as that of an up-to-date Hardware store. Just how suggestive such a paper can be made is shown in the pages of a little monthly called *Barnes' Grocery News*, from the store of J. J. Barnes, 1889 Pearl street, Cleveland, Ohio. This paper is only four pages in size, but Mr. Barnes has seen the wisdom of engaging a man who edits and gets it out regularly. Every offering is couched in the form of a pithy paragraph, and in the little corner devoted to cooking recipes the editor has inserted the names of flavoring extracts, gelatines and other ingredients sold in the store.

The same idea can be used in a Hardware store paper, where, instead of cooking recipes, suggestions concerning the use of the many household specialties, or in stove time even cooking recipes can be given. The hundreds of "seasonable" articles in an up-to-date Hardware store should furnish material for a very interesting publication.

The Repartee Conjugal.

Billkins—Nonsense, Arabella! I would not talk like an idiot if I were you!

Mrs. Bilkins—Isn't it too bad, then, Joshua, that you are not me?—*Browning's Magazine.*

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED SEPT. 6, 1904.

369,329. BROOM OR MOP HOLDER. W. Crain, Brooklyn, N. Y.
369,330. WAGON JACK. J. W. Eperson, Blandinsville, Ill.
369,334. GRATE FOR STOVES. A. L. Goodenow, Utica, N. Y.
369,346. HINGE. L. H. Lempert, Rochester, N. Y.
369,355. CARPET FASTENER. J. McPherson, Cherryville, N. J.
369,433. CARRIAGE JACK. R. J. Buterfield, Westford, Mass.
369,451. DOOR HANGER. Wm. O. Kasson, Cedar Rapids, Iowa.
369,491. STEP LADDER. William R. Allen, Pittston, Pa.
369,493. COMBINED CLOTHES DRIER AND LAWN TENT. F. E. Averill and F. W. Sharp, Pulaski, N. Y.
369,529. LIFTING JACK. F. Kellogg, Brooklyn, N. Y.
369,556. SAD IRON. A. Rosa, Milwaukee, Wis.
369,569. SAD IRON. N. R. Streeter, Groton, N. Y.
369,622. FISHING LINE REEL. E. Titus, Jr., New York, N. Y.
369,645. LIFTING JACK. Wm. F. Knowlton, St. Cloud, Minn.

PATENTS ISSUED SEPT. 6, 1904.

769,142. FISHING REEL. Wm. L. Atkinson, Fairhaven, Wash.
769,166. CAN OPENER. G. H. Jaquith, Chicago, Ill.
769,201. DOOR CHECK. H. Van Blarcom and H. B. Hitz, Milwaukee, Wis.
769,220. FASTENING FOR KNIFE HANDLES. G. W. Hodges, Morgan Park, Ill., and G. S. Hastings, Plainville, Conn.
769,282. TOOL HANDLE. Wm. B. Swan, Seymour, Conn.
769,307. MITER BOX. R. H. Dorn, Los Angeles, Cal.
369,311. FLAT IRON. H. Goldberg. Chicago, Ill.
769,328. CARPET STRETCHER. M. E. Shinn, Chicago, Ill.
769,396. CAN OPENER. E. Novak, Omaha, Neb.
369,412. MIXING SPOON. H. T. Sidway, Chicago, Ill.
769,469. BROOM HOLDER. G. E. Crafts, Bangor, Me.
769,508. ADJUSTABLE SHINGLE CAGE. Lester Stowell, Waukesha, Wis.

PATENTS EXPIRED SEPTEMBER 13, 1904.

369,687. STRAINER. C. A. Bryant, Wakefield, Mass.
369,711. LEMON SQUEEZER. J. T. Hodson, Cambridge, Mass.
369,721. VESSEL HANDLE. F. C. Kasch, Akron, Ohio.
369,722. WAGON JACK. C. Q. Kelley, Ewing College, Ill.
369,744. 369,745. MEAT CUTTERS. A. Shepard, Plantsville, Conn.
369,770. MITER BOX. J. R. Brewster and O. E. Williams, Windsor, Vt.
369,800. SHOVEL HANDLE. J. O Mantor, Northampton, Mass.
369 830. SMOOTHING IRON. T. Wollworth, Cincinnati, O.
369,832. PAN. A. Bardell, Brooklyn, N. Y.
369,838. COFFEE FILTER. L. W. Buxton, Nashua, N. H.
369,853. VEGETABLE CUTTER. W. L. Hinsch, Piqua, O.
369,901. TRAP LOCK. J. F. Mollensak, Chicago, Ill.
369,909 SAFETY RAZOR. H. C. Bliss, West Springfield, Mass.
369,946. WARDROBE HOOK. W. Jayne and J. P. Crosby, New York, N. Y.
369,962. COAL HOD. J. Ringer, St. Louis, Mo.

PATENTS ISSUED SEPT. 13, 1904.

769,723. KNIFE SHARPENING DEVICE. T. Wilkins, New York, N. Y.
769,725. ADJUSTABLE KNIFE BLADE HOLDER. H. E. Britton, Stoughton, Mass.
769,736. CARPET STRETCHER. J. P. Gallagher, Erie, Pa.
770,018. NAIL EXTRACTOR. Wm. C. Morrill, New York, N. Y.

THE FUTURE OF NEW ORLEANS.

Mayor Capdeville, of New Orleans, La., is an enthusiastic believer in the future of that city. In an interview in the *Daily States* he says:

"New Orleans to-day, by reason of its important trade position and the development of the gulf coast generally, has achieved a distinction and an individuality that is bound to vastly enhance its prosperity and importance in the next decade. As the funnel through which the great bulk of the produce and commodities of the Mississippi and Ohio valleys, and the trans-Mississippi country is finding, and must continue to find, its way to the sea and to the countries of the Old World, it follows that its progress as a port will increase in proportion to the increase in production in the territories mentioned.

"To-day New Orleans stands as the first port in the forwarding of grain, cotton and rice, and is the second port in the handling of all exports in the great United States. Possessing one of the really great harbors in the world, with ample accommodation for the merchant marine of all civilized countries; with a water front comprising nearly thirty miles within the corporate limits, including both sides of the river, and with eight miles of splendid wharves, it enables all kinds of business to concentrate at our very doors, add to the opportunities and facilities and effect a combination unenjoyed by any other commercial city in the United States. During the past three years New Orleans has leaped, as it were, from a conservatism which may have proven inimical to its best interests in the past, and has started forward with a constantly increasing tendency not alone to manifest its superior advantages, but to grasp every available opportunity in an effort to fix its prosperity and progress in the world of commerce. A supreme feeling of confidence has taken possession of the hearts and minds of a united citizenship, and with this virile optimism shining upon its civic and business life, there can be no staying the onward march which is destined to make New Orleans a city of 500,000 souls at the end of the present decade."

FOLSOM STEEL RANGES.

The general appearance and workmanship throughout of the Folsom Steel Ranges is strictly first class. It is claimed that every range is carefully made by experienced workmen and that the material is of the best cold rolled patent leveled Steel, and only the best new cast iron is used in their construction. The patterns are made especially to get the necessary strength and weight in the right place to produce the best results. The ovens are square and extra large. The oven bottom is made of extra heavy steel and securely braced with heavy steel bars riveted to under side to prevent buckling or warping. The top of same is supported by a heavy casting, which also acts as a support for the

FOLSOM STEEL RANGE.

top centres and ovens. The flues are scientifically constructed so as to produce uniform temperature in every part of the oven, which insures perfect baking and thorough roasting. They are lined with heavy asbestos board, which is protected between two sheets of steel, thereby keeping the heat within the Range. The fire box is lined with improved corrugated iron linings and is designed for durability and economy in fuel. It is also made with an extension to use in burning long fire wood. The grate is of special design, Duplex style, is the simplest and most durable grate in existence. It can be removed from the fire box without disturbing the side linings or grate rest, and is adapted to burn hard or soft coal, coke or wood. The top of the Range is made in four pieces, looks neat, has smooth surface, is strong and guaranteed against fire cracking. The centres are amply heavy and strong and are supported in the middle to prevent sagging. The covers have the required weight to make them convenient to handle, and are guaranteed against fire cracking or burning out. The reservoir is made of copper and it is easy to keep clean. It has no dampers to watch, and is always ready, always clean and furnishes plenty of hot water. The covers of reservoir are flush with the top of the Range and can be used as a shelf. The high closet is of a neat design, very roomy, with rolling door, two drop Tea Shelves and a Towel Rod. These Ranges are made in black enamel style, and finished with the best grade of nickel plated trimmings. All trimmings in plain black are furnished where wanted in place of nickel plated. The Folsom Steel Ranges are manufactured by the C. G. Folsom Mfg. Co., South Bend, Ind., whose advertisement will be found in this paper.

RUNNING THE STORE.

BY F. F. PURDY.

(*Written for* HARDWARE.)

A live Hardware dealer who is located out on Broadway, Brooklyn, has some interesting things to say about pushing business and fighting department store competition. He is increasing his business year by year, and it is evident that before long he must burst his boundaries and enlarge, which gives added weight to his views. He says:

"We exclusive dealers must concede that it is largely our own fault that the department stores and mail order houses have made so many encroachments on the regular Hardware trade. The business is ours with proper effort. I know dealers who don't like to deliver goods, who neglect their windows and have no system in their storekeeping. When a box is delivered it stands pat until it is emptied by sales to customers, if it takes several weeks. There is not a price card in the windows; advertising is practically unknown. In this age it really is a puzzle how these fellows get along—and there are more of them than you might think.

"With decent attention the Hardware business in any kind of a community will show good results. I have tended to business and simply given it the good attention that any enterprise requires, and the result has been a gradual and fairly rapid increase. Out here on Broadway a man is throwing away money to neglect his windows, for one thing. I change this window one week, the other the next week, and so on. I use price cards and learned to letter them myself with appropriate inscriptions, so that I can address the throng in the street as the freak takes me. Did you ever see Broadway on a Saturday night? That's the time your windows are working full tilt, although there is likely to be something doing any time. I have sometimes had inquiries for a certain article I had labeled with a price ticket before I had completed fixing the window, and a half dozen purchases a half hour after. This only shows the way the windows work and how much a man misses by not attending to them. It might even be better to change them oftener than I do. Think of the hundreds of articles in a Hardware store. There should be a traveling procession of them through the show windows during the entire year. Thus the stock is brought to light. It is certainly not attracting the attention of the public locked up in boxes and bins.

"And I have no hesitation in quoting prices and putting on price tickets. It leads to quick sales, and a low or fair price will pull many a person into the store who would otherwise go past.

"Most dealers outside the shopping districts of big cities have no opportunity to advertise profitably. It isn't policy to pay for nine-tenths of a circulation that is of no use. But we have out here a weekly publication of real merit for free circulation in this neighborhood. I have six inches each week, and change the ad. each issue. I offer no particular bargains as such, but in each ad. name three or four good values in various articles, illustrated if possible. These articles, with price cards, are conspicuous in my windows or store interior. Thus the ad. and window supplement each other. One good stroke recently was in Mason jars and the rubbers for old jars, making a special point of *new* rubbers.

"I deliver anything costing from a cent up. A child or a domestic receives courteous treatment, no matter how small the purchase. It is easy to acquire a good reputation for a store or the otherwise, and constant and prompt attention will set the tide going in the right direction. My stock is kept well sorted up, and hence we are not 'just out' when a customer calls for anything a little out of the ordinary, and we need make no bluff about the stuff being 'just ordered and will have it tomorrow.'

"This is a simple enough program, requiring much more industry than genius by all odds. Another department store feature must be exposed when necessary. That is, the frequent runs on certain well-know articles—say Stanley planes. Maybe they have a few left and put a very low price on them, and put in an ad. The loss of profit on a half dozen planes is much more than made up by the higher quotations in other things. The fact is, and it can be demonstrated, that, take the selling prices of our stock and the same quantity of any department store, and if both stocks are inventoried at the retail selling price, ours would inventory much the lower. It is well known that this is a general condition in the trade. Dealers should contrive in some way to bring out this fact in their ads. to produce a widespread impression and without appearing to specially combat any class of merchants, for that would attract attention unduly to the department stores.

"Hardware is such a natural rallying point for so many articles of a kindred nature that opportunities for expansion are constantly opening to members of the trade who desire to take advantage of them. There are plumbing supplies, sporting goods, paints and oils, plated ware of various kinds and a great variety of house-furnishing goods, as well as trunks and certain descriptions of leather goods. It is only a question of capital. A great business may naturally be grafted upon a regular Hardware store, and this business can be accommodated easily and appropriately. In fact, with all due regard to their position with respect to department stores, the Hardware dealers may indefinitely expand their business consistently and include a number of kindred lines in a way that will not detract but add to their specific reputations as proprietors of department stores."

There are many instances of a successful prosecution of the above plan, but none, perhaps, more notable than in the cases of Walbridge & Co. and Weed & Co., of Buffalo. Both are large Hardware stores, on the department store order, all the stock based easily and naturally on Hardware. The window displays vie in attractiveness with those of the dry goods stores. The places are daily thronged with women and the goods are attractively displayed in elaborate glass cases in the store. Toys, sporting goods, plated and silver ware, fine cutlery, hammocks and "house furnishings" (except, of course, furniture and carpets), bric-a-brac and a long list of other wares are carried in full stocks.

The publicity department of both establishments is carried on an extensive scale. The hundreds of small, neat cuts of each, by means of which the stock is opened up to the view of the public, are familiar to the readers of the papers of Buffalo and tributary territory. In addition to this, catalogues are distributed throughout the Buffalo territory, which aid in bringing a great deal of business into these stores. It has taken many years to develop these enterprises up to the present dimensions. The owners have turned the current of trade in Hardware their way, though there is no lack of flourishing Hardware concerns in the surrounding towns.

Some one has said that every man is either a hammer or an anvil. Action, positiveness is the hammer. The negative, passive quality—mere receptivity—is the anvil. Every Hardware man, in city or country, whether he is beset by department store or mail order competition, should adopt the "hammer" end of this theory—hammer on correct stock keeping, hammer on good windows, hammer on polite attention to customers, prompt deliveries and effective advertising. Then he can be assured that somebody else is the anvil.

REVIVAL OF TRADE IN SOUTH AFRICA.

After a long period of depression, business prospects in the South African colonies are much brighter. Dr. Jamieson in a recent speech said: "The depression was only temporary, and from the present situation there is every prospect of a better state of things." On all sides are evidences of a revival of business. The *Export Gazette* says: "The accumulated stocks of merchants have been considerably reduced and larger and more frequent orders are reaching manufactures. The banks are continually opening new branches all over South Africa; the mining companies are doing their utmost to increase the present gold yield, a policy which will redound to the benefit of the whole world; and South African Governments have large schemes for railway extension on hand, and are fostering agricultural progress by developing irrigation and land settlement. Altogether, there is ample justification for the hopeful view which we have taken throughout that not only is an early revival of trade in South Africa inevitable, but that when it comes it will inaugurate a period of unparalleled prosperity more enduring than any of its predecessors."

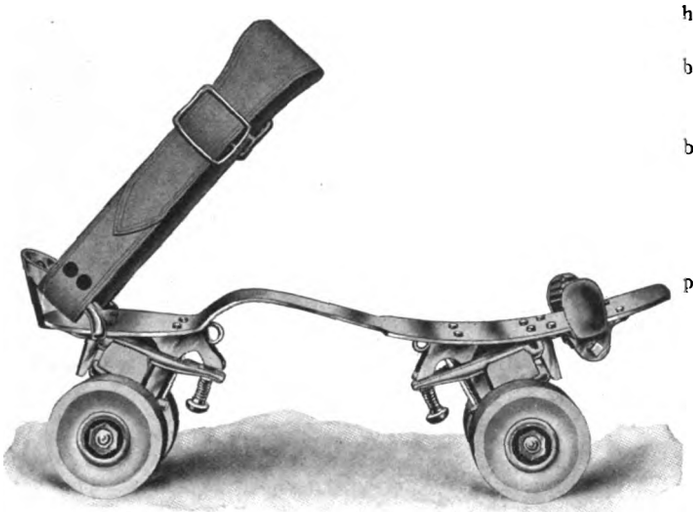
The city government of Johannesburg is planning to spend during the next two years over $20,000,000 to provide a sanitary

Digitized by Google

sewerage system and a long list of other public improvements.

A writer in the *Export Gazette* says that the resources of South Africa are too numerous to admit the possibility of lasting commercial depression, for not only is it rich as a gold mining country, with diamond deposits of fabulous wealth and with extensive mines of coal, iron and copper, but besides all this wealth there is the broad rolling veldt, rich in pasturage for millions of sheep and cattle, and the rich stretches of well watered land, producing with little effort fruits, grains and vegetables of both temperate and tropical climes.

In another issue of the same publication a writer says: "The volume of the United States trade with South Africa never shows retrogression. Within the period of ten years it has actually increased its bulk ten fold, and throughout increase has followed increase without a single break."



In 1894 the exports from the United States to British and Portuguese Africa amounted to $3,364,850; in 1903 to $36,978,700. Of the shipments made last year 8 1-3 per cent. were carried in British vessels, 8 per cent. in German, 6.1 per cent. in French and only 1.3 per cent. in American ships.

Among the lines of special interest to the readers of this paper are the following: Agricultural implements exported from the United States to South Africa in 1902 to the value of $398,335, in 1903 to $1,227,590; small tools in 1902 $103,035, in 1903 $220,555; locks, hinges, etc., in 1902 $236,715, in 1903 $574,-695; safes, stoves and ranges, $105,345 in 1902 and $240,020 in 1903; nails, spikes and tacks in 1902 $32,305 and in 1903 $100,920; lamps, etc., $43,560 in 1902 and $133,935 in 1903; cash registers in 1902 $9,280 and $65,035 in 1903; sewing machines in 1902 $12,205 and in 1903 $38,385.

American export trade with South Africa shows an increase of 40 per cent. from 1902 to 1903, while the increase of British trade during the same period was only 6 per cent.

HENLEY'S ROLLER SKATES.

M. C. Henley, the well-known roller skate manufacturer of Richmond, Ind., is on the market with a full line of improved roller skates, one of which appears in the accompanying illustration. The manufacturer claims great durability, together with easy and light running qualities, and, while his product in this line is far from being of recent reputation, yet the improvements made from time to time have brought them, he claims, to the greatest degree of perfection in a roller skate.

HENLEY'S IMPROVED ROLLER SKATE.

Mr. Henley was the original user of rubber cushions between the trucks and plates; his latest models, both plain and ball bearings, embrace this construction. The trucks of all Henley skates are instantly removable. He claims for the Henley skates that they are the most practical and economical ones, requiring least repairs; that they are made of the finest material throughout, symmetrical in proportions, style and finish. By the use of the rubber cushions above referred to in connection with the pressure plate, all of his skates are given the requisite tilting or lateral motion so essential to easy and graceful skating, and which desirable quality, he claims, is possessed by no other make of skates. The Henley factory is the largest one of the kind in the world, and has a capacity of 2,000 pairs of skates a day, and Mr. Henley reports that the business has revived to an astonishing extent during the past two years, until it is now approaching in volume to that of former years during the roller skate excitement between the years 1880 and 1890, and he is now confident, from present indications, that this popular movement has come to stay. Rinks are being opened in all parts of the country, and shipments of skates are being made daily, although early in the season. A new and elegant catalog has been recently issued by Mr. Henley, one of which we have just received, and which is finely printed with excellent illustrations showing his full line of roller skates, supplies, etc.

THE ATLANTIC CITY MEETING.

The approaching annual convention of the National Hardware Association and the American Hardware Manufacturers' Association, to be held at Atlantic City, N. J., on the 16th, 17th and 18th of November, promises to be a large and important gathering. The committees who have charge of the entire arrangements are meeting with great success. The official headquarters of the National Hardware Association will be at the Rudolf Hotel, although all the available rooms which can be secured at the Rudolf will doubtless be reserved by the manufacturers, as they have a fondness for the jobbers which makes it desirable for them to get in as close touch with them as possible. The committee will endeavor to see that all who apply for rooms at the Rudolf are treated fairly, whether members of the National Hardware Association or not.

The following auxiliary entertainment committee has been appointed, which will co-operate with the entertainment committee at the convention:

A. H. Decatur, Baldwin, Robbins & Co., Boston, Mass.
H. W. Waite, Ranlet & Co., Boston, Mass.
A. D. Clinch, Underhill, Clinch & Co., New York City.
Chas. H. Turner, Albany Hardware and Iron Company, Albany, N. Y.
A. J. Bihler, James C. Lindsay Hardware Company, Pittsburgh, Pa.
Felix Bahlmann, Kruse & Bahlmann Hardware Company, Cincinnati, Ohio.
Geo. W. Trout, Trout Hardware Company, Chicago.
F. E. Cutler, Cutler Hardware Company, Waterloo, Iowa.
W. M. Glass, Lee-Glass-Audreesen Hardware Company, Omaha, Neb.
O. B. Barker, Barker-Jennings Hardware Company, Lynchburg, Va.
A. B. Palmer, Palmer Hardware Company, Savannah, Ga.
Lee Richardson, Lee Richardson Hardware Company, Vicksburg, Miss.
W. D. Taylor, Geo. Worthington Company, Cleveland, Ohio.
Chas. M. Biddle, Jr., Biddle Hardware Company, Philadelphia.
Robert Biddle, Biddle Hardware Company, Philadelphia.
W. J. Parson, Seltzer-Klahr Hardware Company, Philadelphia.
Z. T. Hall, Hall & Carpenter, Philadelphia.
J. A. McKee, Merchant & Co., Philadelphia.
C. J. Riter, Riter Brothers, Philadelphia.
W. T. Gummey, Gummey, McFarland & Co., Philadelphia.
Paul A. Griffith, Shields & Co., Philadelphia.
E. S. Fogg, Supplee Hardware Company, Philadelphia.
H. F. Chorley, W. H. & G. W. Allen, Philadelphia.
J. T. Balderston, W. F. Potts, Sons & Co., Philadelphia.

THE U. S. METAL POLISH.

George W. Hoffman, 295 East Washington Street, Indianapolis, Ind., is the manufacturer of the U. S. Metal Polish which has been on the market for over twenty years, and may be said to have an established reputation. This paste removes stains, and produces a brilliancy equal to new. It has no equal, it is stated, for cleansing and polishing gold, silver, plated ware, show cases, store fixtures, brass, nickel, zinc, copper, etc. It is non-injurious to either the metals with which it comes in contact or the person using it. The paste is put up in three ounces, one pound, five pounds or in bulk at very moderate prices. Those unfamiliar with the goods may obtain a sample by sending a two cent stamp and mentioning HARDWARE. Trade discounts will be given upon application.

JAP-A-LAC

"WEARS LIKE IRON"

JAP-A-LAC, the new wood finish, has grown in popular estimation until to-day it is the recognized superior of all wood finishes.

We have had unbounded confidence in **JAP-A-LAC** and have backed up this faith by the expenditure of vast sums of money to make it a household word in every corner of the land.

We are still spending money for this purpose and shall continue doing so.

Watch the leading magazines and exclusive women's publications and see what we are doing.

Start with the April issues of the *Ladies' Home Journal, Delineator, Designer, New Idea, Woman's Home Companion, Ladies' World, McCall's, Everybody's* and *Good Housekeeping* and many other publications, and try to realize the millions upon millions of people who each month read at least a portion of the "Story of **JAP-A-LAC.**"

Never before was a varnish product so thoroughly known. It insures millions of sales for **JAP-A-LAC,** and you will have your share of the demand.

Won't it pay you to place your order now and be ready to supply your customers' wants?

We have a specially alluring proposition for dealers and will gladly furnish information regarding it upon request.

The **GLIDDEN VARNISH CO.**

MAKERS OF HIGH GRADE VARNISHES

No. 44 Williamson Bldg., Cleveland, O.

GLIDDEN VARNISH CO.

The Glidden Varnish Co., Cleveland, O., have recently sent the following letter to the Trade announcing a change in their terms of sale after October 1.

IMPORTANT—CHANGE OF TERMS.

To the Trade:—

For a long time we have been seriously considering the subject of terms as now applied to the varnish business, believing sincerely that the condition of the markets on raw material does not justify the continuance of present terms. We have hesitated to make any change in this direction, based upon the hope that some relief from the now onerous restrictions surrounding the purchase from supplies from first hands would soon be forthcoming. Such relief is not in sight. On the contrary there have been steady advances in the prices of all raw materials, but principally Varnish Gums, Linseed Oil and Turpentine, due, for the most part, to combinations which control or limit the output. We are compelled to purchase the greater part of our supplies on thirty days' time, thus necessitating under the present selling terms, the employment of large capital that is forced to remain idle over a considerable period. We are to-day the largest advertisers in the varnish business, having reached that position through the expenditure of a large sum of money. We cannot hope to continue this work unless we are able to turn our capital oftener.

In this enlightened age, the benefits of advertising are apparent to all who read and think. We believe this course produces the best possible means for the sale of our products through the dealer. The knowledge that the present high standard of quality of our products will always be maintained gives positive assurance of satisfied customers, and it is our purpose to not only continue, but materially increase our work in giving publicity to Glidden's Varnishes.

Therefore, on and after October 1st, 1904, our terms on Jap-a-Lac and all Varnishes to the dealers' and jobbers' trade will be: "60 days net, or 2% off for cash in 10 days from date of invoice."

In the meantime, we will accept orders for shipment not later than September 30th, 1904, on the present terms, thus giving ample opportunity to all our customers to supply their wants.

We ask that you kindly acknowledge receipt of this letter on the enclosed postal, and thanking you in advance for a continuance of your business, which we assure you is appreciated, we are

Very truly yours,

THE GLIDDEN VARNISH CO.

MILLIONS OF HORSESHOES.

"Two million kegs, containing 160,000,000 horseshoes, are used annually in the United States and Canada, approximately speaking," said S. L. Martin, of Boston, who represents an iron manufacturing concern and was in New York recently.

"That was about the number used last year, and all the hue and cry about rubber shoes and automobiles is raised in the face of a constantly increasing sale of horseshoes. As a matter of fact, the use of rubber horseshoes, which is confined almost altogether to the large cities, is a help to manufacturers. The sale of the old-fashioned shoes goes on increasing, and in addition to that the manufacturers have an opportunity to make the steel portion of rubber shoes. All so-called rubber shoes have a rim of steel in them, and it is usually of better metal and gives the manufacturer a wider berth for profits than the old-fashioned shoe."

INDORSING CHECKS.

"You will notice," said a city detective, "that nearly all business men, instead of simply indorsing a check, prefix 'for deposit' with a rubber stamp and give the name of the bank. Cleveland, Ohio, merchants have learned a lesson by experience that cost one of them $600, says the *Leader*. "A man walked into a jewelry store and selected a $125 gold watch, leaving a check for $600 drawn on an out-of-town bank, with the instructions that the watch be regulated, and that he would come after it and his change a week later. On returning he was informed that his check was no good. 'Well, that's strange,' he said. 'It's the second time the bank has done that thing on me. But here's the money for your watch,' and he counted out $125 in currency and started for the door. 'Oh, yes,' he said, turning around, 'you had better give me that check.' It was willingly handed over to him. On the back was the jeweler's simple indorsement. With this the man went into the bank, got it cashed and was never heard of afterward."

REVIEW OF THE MARKETS.

WIRE NAILS.—There is an excellent business doing, so much so, it is beginning to be difficult to obtain promptness in delivery from the mills. There is still a tendency to sell carload lots at the jobber's price to both classes of trade. The leading manufacturers manifest a reluctance to accept orders for future delivery beyond thirty days. Quotations are as follows: F. o. b. Pittsburg, 60 days or 2 per cent discount for cash in 10 days.

Carload lots	$1.60
Less than carload lots	1.65

New York.—The trade is increasing in volume from the retailers in this city and vicinity to an encouraging extent, and the merchants are buying freely in car load lots. The market is held firmly at the following quotations:

Single car loads	$1.79½
Small lots from store	$1.85 to $1.90

CUT NAILS. Association quotations are as follows: $1.60 for car load lots and $1.65 for less than car load lots, and these quotations represent the markets. Iron Nails in Eastern Territory are still quoted at the same prices as steel nails, but in territory west of Pittsburgh, iron nails are quoted in our load lots f.o.b. Pittsburgh at $1.65 with an advance of 10 cents in less than car load lots.

New York. The Cut Nail market is in a very satisfactory condition, an increased sale, with the market firm. Quotations are as follows: Car loads on dock $1.74, less than car loads on dock, $1.79. Small lots from store $1.85.

BARB WIRE: An increased demand is noticeable that is very satisfactory and good orders are forthcoming in consequence. Quotations are as follows: f.o.b. Pittsburgh, 60 days or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.75	$2.05
Retailers, carload lots	1.80	2.10
Retailers, less than carload lots	1.90	2.20

SMOOTH FENCE WIRE: With an increased demand and liberal orders, the market is moving well. Quotations are as follows, f.o.b. Pittsburgh, 60 days or 2 per cent. discount for cash in 10 days.

Jobbers, carload lots	$1.45
Retailers, carload lots	1.50

The above prices are for base numbers, 6 to 9. The other numbers of plain and galvanized wire takes the usual advances.

SHEET ZINC.—Under date of September 13 the manufacturers of Sheet Zinc announce an advance of 10 cents, making the present price $6.20 per 100 pounds, f. o. b. mill, in 600-pound casks, subject to the usual discounts.

CORDAGE.—The following prices represent the market:

	Cents per lb.
Pure Manila, 7-16-inch and larger	11½
⅜ inch	12
¼ inch and 5-16	12½
No. 2 Manila	10¼@10¾
Pure Sisal, 7-16 inch and larger	9
No. 2 Sisal, 7-16 inch and larger	7½
⅜ inch	8
¼ inch and 5-16-inch	8½
Lath, Yarn, Medium and Coarse	7½
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL.—Under date of September 22, the following quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....44 cents per gallon.
In lots of 5 barrels or more.....43 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE PITTSBURGH TRADE.

A very noticeable improvement in business is felt this month. There seems to be a feeling that it is time to shake off the lethargy of the past year and get things moving again on a large scale. In the coke region nearly all the ovens are being operated and quite a number of new ones being built. Among the mills great activity is noticed. The Pennsylvania Railroad is putting men to work who have been laid off for months. The drag in the steel business has lasted a little over a year, but the country at large is too prosperous to allow it to hold back longer, and we look for steady improvement from this time on. Our local exposition is now open, with good music and a good show, and is drawing our country cousins from nearby towns in goodly number. There are many people who cannot afford a trip to St. Louis, but who can and do visit this show for their annual vacation. The recent purchase by the Wabash Railroad Co. of coal property and terminal facilities at Pittsburg is an important matter, insuring large tonnage and trackage for reaching manufacturers. The Wabash has spent big money to get a share of the Pittsburg business and it cannot help but prove profitable to the road and also to Pittsburg.

LOGAN-GREGG HARDWARE CO.

THE SAGINAW TRADE.

Your favor of the 15th is at hand, and in reply would say, that different merchants of this city, including one of the directors of Morley Brothers, took three automobiles and had a ride out into the country about fifty miles to see how the crops were progressing. The party was very much surprised to see the corn so forward. Some of the fields had already been cut, and most of the fields were out of danger from frost. The potato crop looked well, and the apple crop seemed to be very large. The sugar beets looked better than ever before, and they claim there is more saccharine matter in them than heretofore. There have been rains enough to keep the pastures and fields green, and the cattle look slick and fine. We went through quite a dairy country, and the butter and cheese factories showed that there was a good deal of business done in those lines. The farmers are waking up on the question of good roads. This part of the State has had poor roads, but they are generally improving them, and part of the way we went over good stone roads. The best thing that could be done for our country would be for the United States and the States to help along good roads. Whatever money is spent for good roads is a good investment. The wear and tear on horses, harness and wagons costs more in the end than the money put into good roads. I understand in Sweden every farmer has to keep the road in front of his farm in good order, same as a lot owner in a city has to keep up his sidewalk. The brains of the country should try to get up some system by which good roads could be had through the entire United States. The country we went through yesterday, twenty or twenty-five years ago was covered with timber. Now the timber is all gone, and fertile farms are in its place. Trade is not as good as it was last year, and collections are slow, but when the farmers sell their crops this fall we anticipate a normal business.

MORLEY BROTHERS.

THE MINNEAPOLIS TRADE.

Realizing that the crop situation in the Northwest would naturally be of interest to the country at large and particularly to manufacturers, we enclose herewith copy of an editorial from the *Minneapolis Journal* of the 12th inst. that gives a summary of the situation very much better than we could possibly do:

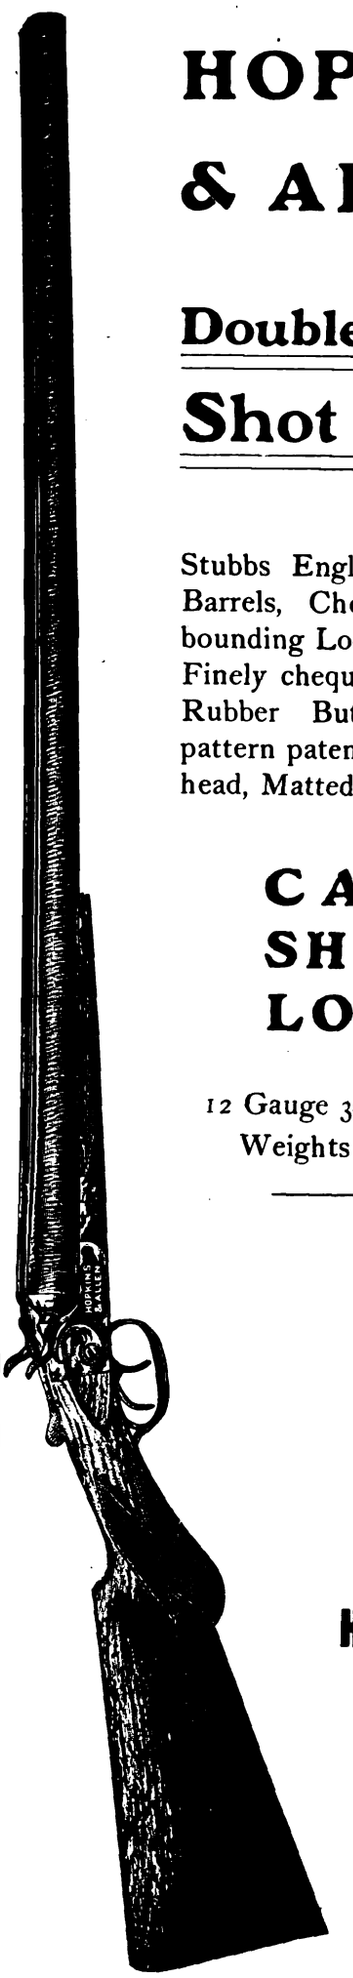
"The partial failure of the wheat crop this year is said to have created some apprehension in the East as to the business outlook in the Northwest. That mistake is due to two things: One is that some people have not yet learned that, while Minnesota is the greatest wheat State in the union, wheat is a very small part of our total farm production. The other is that those who think the reduction of the wheat crop means less money in circulation, have forgotten that the wheat crop is short everywhere this year, and that the price is, therefore, so much higher

Digitized by Google

that the farmers of the Northwest are likely to get more for their comparatively short crop than they ordinarily get for a full one. Last year the wheat crop of Minnesota was estimated to have been worth to the farmers approximately $49,000,000. The yield was about 70,000,000 bushels. This year's crop, on account of the peculiar conditions, cannot now be closely estimated, but is expected to reach 60,000,000 bushels; for, in spite of the injury done in some quarters, it must be remembered that the damaging causes were not in operation early enough to seriously affect the yield in the southern portion of the State, where there is a lot of very fine wheat. There is sound reason for believing, therefore, that this year's crop, at the high price which it is sure to command, will sell for more money than last year's. Last year the value of other field crops—corn, oats, barley, rye, hay, potatoes and flax—was estimated at $62,000,000. This year these crops appear to be better than last year. So that, notwithstanding the loss in the number of bushels of wheat grown, it is still probable that the value of the field crops of the State will exceed last year's. This State produces annually in domestic animals, dairy products, poultry and poultry products, approximately $40,000,000, and according to government crops, ranks fourth among the States of the union in the value of all farm crops. Wheat, although an important crop, it will be observed by these figures has ceased to predominate as in earlier years, the other farm products having increased enormously in quantity and value. A state in which diversified farming and the use of the most intelligent methods in vogue has been brought into play, as they have been in Minnesota, is no longer disturbed by a partial failure of one crop, especially when prices are so enormously high for the diminished quantity of that crop as is the price of wheat at this time. And what has been said of Minnesota in this connection is true in the main of the Dakotas."

We might add that the facts as we learn them from different men in the grain trade practically coincide with the situation as outlined in this article. We asked several of the grain men if the farmers had to any considerable extent sold their wheat. The question being whether they were to receive the benefit of the high prices prevailing or whether it was going to the speculators. The general reply was that they had not disposed of their wheat, but, as the threshing is late, were waiting until they actually had the article to sell. This certainly is wise, as it seems to be quite a question as to how much each individual farmer will have after he gets through threshing. In a great many instances we learn that it proves to be better than was anticipated, while undoubtedly in as many or more cases there probably is disappointment the other way.

We still cling to our belief that this year's crop as a whole will bring approximately as much money into the Northwest as any crop ever raised, the unfortunate part of it being that it is spotted.



There is undoubtedly a general shrinkage in all lines of business among the jobbers and large retailers. This will consequently affect their purchases even to a greater extent than the shrinkage in sales, and this will be felt through the Spring business; but with the following values for this year's crop for the State of Minnesota, wheat, even at $1.00 per bushel to the farmer (cash wheat is selling at about $1.25 Minneapolis now), according to this article 60,000,000 bushels value $60,000,0000, and taking other grain at last year's valued $62,000,000; domestic animals, dairy products, poultry, etc., $40,000,000, making a total of $162,000,000 from this source alone *for the State of Minnesota*. We are not in such terrible shape as some people in the East seem to apprehend. Probably the States of North and South Dakota together will show up an equal amount. Yours truly,

W. K. MORISON & Co.

THE DAVENPORT TRADE.

Small grain is all harvested and the crop is satisfactory both in yield and quality. The tonnage of hay is below the average, but quality is superior. Corn is rapidly maturing, and if the frost holds off until the eighth of October, which the records show has been the average for thirty years, there will be an exceedingly large crop. Money is scarce and collections are consequently very slow. Sales are approximately what they were a year ago, but there is apparently no snap to business. Prices are fairly well maintained and there are no important changes to record.

THE ST. PAUL TRADE.

Business is fairly good, though our average crop is not as large as we expected it would be; on the other hand, prices are higher and the net result to the farmer will be about equal to other years.

The steadiness of prices pleases us and satisfies the trade that values will not undergo a series of declines.

There is some demoralization in the wire and nail market, and which will, without doubt, steady itself in time. Rumors of advances are in the air, and are caught up by some buyers, with the result that they are anticipating the future by buying now. Our opinion is that no loss can result on such a purchase, though there may be no money made. It seems a safe purchase with the speculative element of a possible advance.

HACKETT, WALTHER, GATES HARDWARE CO.

THE COLUMBUS TRADE.

This is the time of the year for cutting corn and husking pumpkins, and it is being done with a vengeance all over the State. We have had a few light frosts, but no serious damage has been done. Trade is really good and dealers are anxious to have their goods in stock early so as to not lose any business. Manufacturers are slow in making deliveries, which indicates one of two things, either a heavy demand or lack of preparation to take care of orders. A number of articles are being sold without profit by jobbers in Ohio territory. No doubt this condition prevails in other sections. Jobbers get out of their geographical territory and offer premiums for orders, and that forces others to meet unprofitable prices with the result of an unsatisfactory showing at the end of the year; but we must do something to keep us out of mischief, and the hardware business will do it. The writer visited the great Fair at St. Louis and was well repaid for his trip. It is certainly a great exhibit of the ingenuity and resources of the world. It is also a great educator in many ways, especially as to foreign products. France, of course, leads the world in fine costumes. No doubt many a lady gazed with envious eyes at the beautiful gowns and cloaks, and imagined how beautiful she would look arrayed in one of them. Japan's exhibit of needle work was wonderful; but it takes the United States to produce the really useful things. And when it comes to machinery, agricultural implements, the minerals and grain, all foreign countries must go way back and sit down. I remarked to a companion, that we can get along very well without Paris gowns and Japanese needle work, but we cannot do without corn, wheat and potatoes. The exhibit of the timber from the Philippine Islands is wonderful. I doubt if many people in this country know that these islands have the valuable forests that are there. No doubt fortunes await those who embark in the exportation of lumber from those islands, providing they can guard against malaria and mosquitoes. I am not so sanguine as to manufacturing projects, unless it be a Tom Tom and Dog factory. No doubt the demand from the Igorrote Tribe in those two products would be large, but the market might soon be overstocked, as the trade would be confined to Northern Luzon. It is an interesting study to visit the various tribes, and it is hard to believe that some of the customs of the tribes are continued. Still, when you come to think of it, we have some tribes of Indians in our own civilized country that are not much better. We have the snake eater Indians, with their Tom Tom dancers and barbarous practices. One would naturally think that having been in touch with the civilized world for nearly a century, they would discard the barbarous customs; but instead, they cling to them like a pup does to a root. It is not surprising, then, that foreign tribes who have never had the chance of imitating civilized people still cling to old customs. It remains to be seen whether they will become civilized under the tutorage of Uncle Sam. I think they will. The Philippine Constabulary is composed of as an intelligent looking body of men as you will see any place. They are medium size, erect, elastic, with fine heads and features. If they are fair representatives of the better class of Filipinos, the United States may well feel proud of its new acquisition. It is to be hoped that our new countrymen will meet our most sanguine expectations.

THE SMITH BROS. HARDWARE CO.

THE PHILADELPHIA TRADE.

It is pleasant to report an improvement in trade during the last two weeks, and we cannot feel that it is due to any special cause, but to a general feeling that the underlying conditions in the country are sound; that crops are satisfactory, bringing high prices, that labor is much more anxious to get to work in advance of the coming cold weather; and that the political presidential pot is doing less boiling than for many years. All of these facts tend to put business on a better footing, and this is being shown by an increase so far this month to the volume of trade. Prices are without material changes, although there are now indications that some goods which have been selling at extreme figures may reach a high level in the near future as manufacturers claim, and apparently with justice, that they are not coming out whole. There is no reason to anticipate a boom in prices, but there is hope that there will be a fair trade during the balance of the year, and that a dealer's stock may be worth as much on January first, 1905, as it is to-day.

BIDDLE HARDWARE CO.

♣

The R. D. Cone Co., of Winona, Minnesota, have closed out their Heavy Hardware Stock and will discontinue that line of business. This company will devote their time to the sale of Shelf Hardware, Tinware, Tinner's Stock, Paint, Glass, Wire and Nails, Fencing, Sporting Goods, Cutlery, Ammunition, Fishing Tackle, and other lines shown in their general catalogue issued to the Hardware Trade. This is the oldest Hardware firm in Minnesota, having been established by Royal D. Cone in 1855.

OUR BRITISH LETTER.

(By our Special Correspondent.)

London, Sept. 13th, 1904.

ASSOCIATION WORK.

During the past few weeks the Hardware trade in this country has enjoyed a rest from disturbing elements and business men have been very apathetic in their movements. It has been holiday season and ironmongers and their customers too have been away from home. The reports of recent ironmongers' association meetings show that the indifference has been temporary, for the gathering of the clans has now commenced in earnest, and good work may be expected from the more enthusiastic associations during the winter months. The London & Suburban Ironmongers' Association holds its annual general meeting to-night and from the agenda paper it is evident some prominent matters will be brought forward. James Pollit will read a paper dealing with Price Maintenance, with which subject he is so familiar. He is commonly called, the Apostle of the System, for the carpet sweepers made by the Bissell Carpet Sweeper Company, of which he is manager in this country, were the first price maintained goods handled by British ironmongers. Since its introduction price maintenance has grown and spread right and left, it has dealt many blows to price cutting and on evil which had grown to gigantic proportions. A few years ago it was quite a common practice for large Stores and some of the larger trading establishments to seize upon some one article that had become popular, either through its special merit or the extensive advertising bestowed upon it, and boom it. That is to say cut down its price to such an extent that the ordinary tradesman could not sell it at a profit, and thus the large storekeeper, caring nothing for the profit on this one particular line, built up a reputation for low prices and obtained customers in a manner not particularly favorable to either the store-eepers or those manufacturers who assisted in the scheme. A fixed minimum price has been a boom welcomed by all traders, and especially by ironmongers who were severely hit. Probably the present attack on the system, and the rather unexpected set back will in the end be beneficial, as it will tend to rouse the trade to the importance of price maintenance. The case of McGruther vs. Pitcher recently abjudicated upon in the Court of Appeal, in which it was decided that the rubber heels under consideration could be sold by A to B under certain stipulations and conditions which could not be made to "run with the goods;" and passed on from B to C; that is to say, C could not be held responsible to A under which B agreed to handle them. Somewhat different powers may be for the conditions exercised by patentees, who may sell goods under license and attach certain conditions to them. However, the special conditions of the case under dispute are not parallel with those under which the majority of goods sold by ironmongers are handled; but some of the issues raised point to the need for specific agreements and clear conditions binding the actual retailer. The matter is now engaging the attention of Hardwaremen and the paper prepared by James Pollit will doubtless treat in an able manner with the entire question.

EXHIBITIONS ALLIED TO HARDWARE.

In addition to Exhibitions directly covering the ironmongery trade there are many now held in London and local centres which have a strong influence upon the development of sidelines and the growth of different branches of trade closely allied to ironmongery. Among forthcoming exhibitions the Dairy Show which is to be held the first week in October at the Agricultural Hall, London, will be interesting to country ironmongers and the exhibits of separators, dairy utensils and modern appliances whereby the value of the products of the dairy can be enhanced, will be carefully examined. Most of the usual British exhibitors will be present, as well as several American firms who are firmly establishing themselves in this country.

The "National" and "Stanley" Cycle shows will be held in November, and they will contain some capital exhibits of motor cycles and cycles, as well as numerous new accessories. British ironmongers have taken up the sale of motor and cycle appliances, accessories, and sundries required in their up-keep, and are consequently much interested in examining the latest developments in this branch of business.

Some interest is shown in connection with the International Gas Exhibition, which is to be held at Earl's Court, London, in November and December. Many of the best makers of gas plant, stoves, cooking, and lighting contrivances have taken space and I understand there is every prospect of a good show. The encouragement of technical knowledge and practical artistic development is a marked feature in all modern work, and present day schemes for the betterment of the trade. One hundred pounds in prizes is to be given in competitions open to artists and craftsmen for new and artistic fitments.

OPENINGS FOR NEW TRADE

Manufacturers are looking out for trade openings in foreign countries and colonial markets. From the Consular reports which reach this country there are several good openings for British merchandise, and, incidentally, for American also. In Sweden there is a brisk demand for better implements and machines. Some of the London shippers are sending mixed consignments to Scandinavian ports, including some implements of American make. The Spanish markets present good prospects for makers of tools and cutlery, and electric lighting plant is called for. The Roumanian peasants want cooking and heating stoves; self-contained appliances are appreciated, also portable heating arrangements. Russia continues to be an excellent ground for makers of implements and machinery and there is some demand for small articles. It is curious that the question of bad packing always crops up in connection with the export of mixed consignments, and foreign merchants extol the excellent methods adopted by American makers. The smart appearance of American Hardware coupled with the first rate systems of packing, resorted to go a long way towards recommending it to the dealer and helping on its sale.

THE NEW EARLY-CLOSING ACT.

The Early-Closing Act recently passed in this country is likely to be hailed with satisfaction by many retailers who reside in districts where a few persistent traders have hitherto been in a position to force others to keep their shops open longer than was either necessary or expedient. The long hours small traders have been in the habit of keeping their establishments going has told upon their assistants, and complaints of discontent have frequently prevented good work and crippled the best energies of those upon whose efforts the proprietors are, to a certain extent, dependent. The Act to provide for the Early Closing of Shops, stripped of its legal phraseology, provides a means whereby a given proportion of traders after satisfying the local authority of its expediency, can procure from the central authority an order making it compulsory for all others of the same trades to close their shops not later than a given time. Provision is made for stores and mixed shops and an order may be made only to apply to the particular branch of trade affected. Fairs and bazaars for charitable purposes are excluded, and provision is made for special conditions of trading. Seven o'clock in the evening on ordinary days is named as the earliest time for a compulsory order but a half-closing day with an order for "putting up the shutters" (to use a phrase which can now be applied in a literal sense in but few cases) at one o'clock on one day in every week may be made. Birmingham is the first large city to appreciate the new Act and the traders in that busy centre are anxious to apply it with all speed, for in many parts of Birmingham there appears to be little or no agreement among the different trades and still less among individual traders. The Birmingham Ironmongers' Association is already becoming a power in the Hardware world and is doing good work in uniting together Hardwaremen and promoting concerted action.

SMART ADVERTISING.

We are often refreshed by the sight of American literature and look with pleasure upon the successful methods of up-to-date Yankee advertisers. Pictorial advertising has always been favored "on the other side" but the bright picture scenes which convey in a more or less distinct form reference to business did not find favor in this country for many long years. Some smart pictorial advertisements of British origin are now well known, but until quite recently few ironmongers thought it worth while to use picture blocks, either on their stationery or in their local advertisements. Times change rapidly and ideas change with them. The picture postcard now so great an institution has done much to revolutionize advertising—especially small advertisements the scope of which was always limited. Ironmongers—not isolated cases, but in many instances—are sending out views and pictures of their establishments and distributing them broadcast.

THE MERCHANT WHO TRAVELS.

The merchant who grows in power and influence, whose business expands in volume and increases in net revenue is the man who is on the alert for new ideas and who has learned where to secure the ideas which are new and worthy of his attention. While claiming great virtue for the trade paper in this regard, one must recognize that in travel lies the greatest possibilities for the business man desiring to come into real contact with the world he is especially interested in. We are all imitators, more or less. But unless we can see or hear of the best things, we cannot incorporate them into our own experience. It has become a time-worn debate whether travel or reading is the more educative. But the business man is under no necessity of arguing this point. The best reading will be almost delivered at his door, as he desires. He should, however, not be content with that, but should, as often as practicable, visit the great centres of life, of business activity. And when he does so, he should lose no opportunity to absorb hints and suggestions likely to be of value to him when he is back to work.—*Hardware and Metal.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incoporations, Etc.

Auburn, Ind.—The Culbertson Hardware Company has been incorporated; capital, $7,000; directors, Hugh R. Culbertson, Frank E. Draggoo and Robert D. Welsh The new corporation has bought out the stock of Culbertson & Boland, a Hardware concern that has been transacting business here for twenty years, and will carry on the business in the same room.

Calumet, Mich.—About October 1st, Michael Johnson, of Pine Street, and owner of the Johnson block, will open a Hardware store in his block. He contemplates putting in a medium stock at first, but as the increase of business warrants it, the stock will be increased. For the first few months Mr. Johnson will take an active part in the business, but when it has been fully grasped by his son, M. Johnson, Jr., the latter will have sole charge.

Chester, Pa.—The Paiste-Harper Hardware Company, of West Third Street, has been incorporated and is now ready for business.

Davenport, Ia.—Henry Wiese is erecting a new Hardware store.

Green Bay, Wis.—The Wisconsin Hardware Co. has been incorporated. The incorporators are: Mitchell, Joannes and Frank E. Murphy, of Green Bay, and A. E. Winter, of Oshkosh. The new company has a capital stock of $200,000, which is to be entirely paid up, and is organized for the purpose of purchasing the wholesale business and establishment of the Gotfredson Bros. Hardware Company, of this city. Morley Bros., of Saginaw, Mich., now operating extensive establishments at Saginaw and Chicago, are the heaviest stockholders.

Lebanon, Mo.—Bantley Bros. Hardware Company has been incorporated; capital stock, $36,000, all paid. Incorporators: O. G. Bantley, C. H. Bantley and R. E. Bantley.

Los Angeles, Cal.—The Great Western Stove and Hardware Company has been incorporated with a capital stock of $50,000. The directors are: G. B. Lewis, J. Sanders, Mamie Reynolds, Jennie B. Lewis and Mary Washington.

Newark, N. J.—Johnson-Mandeville Co. has been incorporated, with John D. Mandeville, agent, at 496 Broad Street; general Hardware business; capital, $50,000. Incorporators: Walter T. Johnson, 778 High Street, Newark; John D. Mandeville, 93 Sherman Avenue, Newark; Florence M. John, 778 High Street, Newark; Albert C. Mandeville, 93 Sherman Avenue, Newark.

Newport, Me.—R. H. Dyer has opened a new hardware store on Water street, wih Harry Merrill as manager.

Portland, Ore.—The Merges Hardware Company has been incorporated; capital stock, $5,000. Incorporators: N. C. Merges, J. P. Wentz, E. E. Merges.

Portville, N. Y.—C. F. Townsend, of Ischua, will shortly open a new Hardware store in this town.

San Antonio, Tex.—The Bond Hardware Company, of San Antonio, Houston, Cameron and Del Rio, capital stock, $125,000, has been incorporated. Incorporators: John H. Bond, Jr., R. H. Wester and N. K. Tracy, all of San Antonio.

Steubenville, Ohio.—On September 15th J. D. Owens opened a new Hardware store.

Changes.

Ashland, Ky.—The Foster Hardware Company, of Huntington, W. Va., have completed preparations for opening a branch house of their company, and are now ready for business.

Ashtabula, Ohio.—The Hardware firm of Mack & King, heretofore doing business at 227 Bridge Street, dissolved partnership August 1st, the said Louis Mack having assumed all debts, and all credits will be paid to him.

Aurora, Ill.—J. G. Eck, of the firm of Eck & Co., has purchased the interests of his partner, Robert Bennett, in the business in South Water Street. The firm, which has been dealers in farm implements, well drilling, etc., will hereafter be known as J. G. Eck & Co., as before, but Mr. Eck will be sole proprietor.

Bedford, Pa.—John W. Imler has sold his Hardware store to A. M. Myers, of Johnstown, who made the purchase for the Myers Hardware Company. The new firm took charge at once.

Birmingham, Ala.—J. D. Hanby, Hardware dealer, has arranged to open a branch store at Ensley on October 1. Ellis Burwell, who has been with Mr. Hanby since the latter began business here, will have charge of the Ensley store.

Brooklyn, N. Y.—M. S. and P. C. Brown, of 5 Myrtle Avenue, have added a stock of Hardware to their electrical supply and repair and locksmith shop

Cincinnati, Ohio.—The Rhonde-Aufdem Kampe Company has changed its name to the Hudepohl Hardware Company. Julius Rhonde is president.

Congerville, Ill.—Mr. Meikelberry has sold his Hardware and Implement store to Frank Marshall.

Cornell, Ill.—Wibbenhost & McVay have sold their Hardware business and building to Miner Bros.

Dillon, Kan.—J. C. Nusz has sold his Hardware business and intends removing to Woodbine.

Dunlap, Ia.—A. L. Rule has just completed a brick building to replace the frame structure, to be used by him for his Hardware store.

Guthrie, Ill.—H. W. Lenermon has purchased the Hardware store of W. Wilson, and will take possession January 1.

Havensville, Kan.—The large Hardware and implement business of Grover & Johnston, at this place, changed hands on August 24th, the business having been sold to Fred. Day, of Onaga, Kan. Mr. Grover becomes the owner of Mr. Day's $16,000 farm. Mr. Johnson gets real estate in exchange for his interest also.

Houston, Texas.—Mrs. M. Schultz has sold her stock of Hardware to Yerger, Hill & Son, who have moved it into their business house on Main Street.

Jacksonville, Fla.—A fifty-thousand-dollar deal was consummated in this city recently, when the Marion Company purchased from S. B. Hubbard & Co., of this city, the later's Ocala branch store, including all the stock and fixtures. For many years the Hubbard Company has been conducting an extensive branch business at Ocala. The Marion Hardware Company was organized about a year ago, and has been enjoying a great and rapidly growing trade in that part of the State. The officers of the Marion Hardware Company are: Horace Hall, president; T. C Hall, vice-president; L. J. Knight, secretary and treasurer. The new firm has increased its capital stock to $60,000 in order to take in the business which was purchased.

Joplin, Mo.—Joe E. Hall has sold his Hardware store interests to his partner.

Lapeer, Mich.—W. S. Bolton, who has been in charge of the Lapeer Hardware Co.'s store for several years, has bought out a Hardware store at Clifford, the only one in the place, and will close up matters here and remove to Clifford in about thirty days.

Los Angeles, Cal.—C. F. Moore has commenced work on a two-story business block on Myrtle Avenue, which, when completed, he will occupy with his Hardware business.

Louisville, Ky.—The Belknap Hardware and Manufacturing Company have purchased from Goddard & Co. the real estate on Washington Street from Second to Snead, where the Goddard warehouse was located provious to the recent fire. The price paid was $20,000. The property has a frontage of 190 feet. It will be utilized by the Belknap Company for extensions for its business.

Mercer, Pa.—Miller & Bastress, Hardware dealers, have purchased from W. W. VanEman a large lot on Broad Street, and will erect a two-story brick storeroom, which they will use for their business. The building is to be completed by January 1, 1904.

Moline, Ill.—Emil Astlund has purchased the stock of stoves and Hardware formerly owned by A. Colberg and will conduct a store in the old stand, 519 Fourteenth Street.

Newburyport, Mass.—William Holker, Hardware merchant, will short'y remove to his old stand in Market Square. He will occupy all three floors of the building. In his new store he will have 4,000 feet of floor space on each floor. He will continue to carry a large line of general Hardware, farming implements, stoves and furnaces, also a full line of kitchen furnishings. Mr. Holker has been in business in this city for thirty-two years.

Oakland, Cal.—S. Phrophy has moved his stock of Hardware from his old location, on Fourteenth Street, to the California Bank, on Twenty-third Avenue.

Omaha, Neb.—Ed. A. Duquette has removed with his family from Chicago and will relocate here. He has purchased an interest in the P. C. DeVol Hardware Company and will take an active interest in the conduct of the business.

Paris, Texas.—The Blakeney-Brooks Hardware Co. has increased its capital stock from $50,000 to $100,000. The company handles Hardware and mill supplies at wholesale exclusively.

THE HAMMOND TYPEWRITER

Talking points sell goods, but if you depend entirely on the power of words to sell doorhangers the chances of sale are much less in your favor than if you had before you a full size display model Bischoff Doorhanger. Then you can indicate its ease of attachment, no cutting of door necessary, its great strength, supporting a weight of 2,200 pounds, and the angle shaped track which prevents clogging from dirt, snow or ice. Your customer sees with his eyes not his ears. It's the practical demonstration of these special features that sells Bischoff Doorhangers.

This piano finished display model doorhanger sent free with one dozen prs. of Bischoff Doorhangers, sent f. o. b. your city for $8.75 per dozen. Track 6½c. per foot.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Ashville, N. C.—The Mountain Steel Range Company has been incorporated for the manufacture and sale of stoves and ranges. Capital, $50,000. The incorporators are: W. A. Boyce, W. C. Carmichael and H. B. Proffitt, all of Asheville.

Bainbridge, Ga.—The Bainbridge Hardware Company will soon have their own building completed and the machinery set and ready for work.

Camden, N. J.—The Ruppman Door Holder Company has been incorporated. Capital, $50,000. The incorporators are: William D. Hewitt, Burlington, N. J.; Frank W. Ruppman, George V. Lovott, John H. Mitchell, Aloysius J. Mitchell, Jacob Mitchell, Jr., all of Pennsylvania.

Camden, Pa.—The Flag Stove Works has been incorporated with a capital of $20,000.

Canastota, N. Y.—The Patten & Stafford Company has been incorporated, with a capital of $50,000, to manufacture agricultural implements. The directors are: William H. Patten, Elmer L. Mason, L. C. Milburn, Milton Delano and Kirk B. Delano, of Canastota.

Chicago Heights, Ill.—The Columbia Tool Steel Company has closed a contract for the location of its works in Chicago Heights, and will at once begin the erection of several large buildings, including a two-story office building, all of which will be of steel, brick and stone construction, the main building being 75 feet wide by 650 feet long. The works will be equipped with new machinery throughout, and the work of erecting machinery will be pushed forward as fast as possible. The officers of the company are: E. T. Clarage, president; Frank Matthiessen, vice-president; Alexander Peterson, secretary, and M. H. Kilgallen, treasurer. The plant will give employment to many skilled mechanics and a large number of unskilled workers. The company will manufacture tool steel and other high-grade steel products.

Chicago, Ill.—The Thomas Wrigley Company has been incorporated. Capital, $2,500. Manufacturing machinery, tools and supplies. Incorporators: Thomas Wrigley, Samuel W. Packard, Charles F. Nessel.

Clyde, Ohio.—The Clyde Cutlery Co. has been incorporated with $30,000 capital stock.

East Norwich, N. Y.—Oscar Mayer & Wiese Scale Company has been incorporated. The capital stock is $1,000, and the directors Oscar Mayer, Vally H. Wiese, and Otto C. Wiese, of New York City.

Ft. Payne, Pa.—The Ft. Payne Stove and Foundry Company has been incorporated. Capital stock is $25,000. The incorporators are: B. J. Allen, W. C. D. Cook, S. B. Stone and J. B. Haralson.

Harrisburg, Pa.—The E-Z-Up Manufacturing Company has been incorporated with a capital of $25,000. The company will manufacture window shade hangers and other household furnishing goods. The incorporators are: John William Bowman, Cherrick Westbrook, Jr., Casper S. Shaak and Charles M. McNaughton, all of whom live in Harrisburg.

Indianapolis, Ind.—The Center Friction Pulley Company has been incorporated. The capital stock is $12,000, and the directors are: Robert C. Berry, Calvin F. Duke and Ira J. Ross.

Kittery, Me.—The George W. Bowers Manufacturing Co. has been organized for the purpose of manufacturing and dealing in machinery, tools, merchandise and other articles, etc., with $100,000 capital stock. The officers are: President, Horace Mitchell, of Kittery; treasurer, A. M. Meloon, of Newcastle.

Lexington, Ky.—A. C. Brent, of Lexington; Charles S. Brent, of Charlotesville, Va., and Harry K. Brent, of Baltimore, Md., the three sons of the late C. S. Brent, have incorporated their father's business at $25,000 capital stock, with privilege of increasing that amount at any time to $100,000. The name of the new corporation is "C. S. Brent." The purpose for which the company is organized is the "buying, selling, growing, recleaning and handling on commission, of garden, field seeds, grain, produce, feed, plants, implements, general merchandise and fertilizers and the manufacturing of fertilizers."

Lyons, N. Y.—The Globe Pneumatic Tool Company, a $100,000 corporation, with Philip S. Hill, Frank M. Van Wagoner and Frank A. Clarry, New York; E. M. Duffy, Jersey City, an H. T. Mead, East Orange, as directors, has been incorporated.

Marion, Ind.—The National Radiator Company has been incorporated. Capital stock is $25,000. The directors are: Elwood Scott, Elmer Scott, Edgar L. Hampton, Warren Gardner and Alonzo E. Cloud. Elwood Scott is president, Elmer Scott secretary and Edgar L. Hampton treasurer. The company was organized to manufacture a stove on which Elwood Scott holds a patent.

Middlesport, N. Y.—The Magara Sprayer Co. has been incorporated: agricultural tools. Capital, $50,000. Incorporators: D. M. Miers, A. E. Butler, New York; F. H. Waggoner, Brooklyn

Mt. Wolf, Pa.—Residents of Mt. Wolf recently organized a company with a capital of $50,000 for the purpose of manufacturing wire cloth, wire netting, etc. Fifty looms will be installed at once, and within one year the plant will be equipped with 100 looms. The principal product will be wire cloth, but other wire goods will later on be taken up as a side line. The Board of Direcotrs consists of Carlton L. Hoff and William H. Ottemiller, of York; George A. Wolf, Henry Wolf and H. L. Eichinger, of Mt. Wolf; William S. Schroll, of Manchester, and Milton G. King, of Star View. The officers of the company are: Carlton L. Hoff, president; William H. Ottemiller, vice-president; Henry Wolf, secretary and treasurer.

Nashville, Tenn.—The Golden Rule Stove Company, of Blount County, has been incorporated, capitalized at $15,000, by George H. Holliday, A. A. Coventry, Merrill R. Holliday, Samuel Everett and Joseph Burger.

New York, N. Y.—Henry Pearl & Sons Company has been incorporated to manufacture door Hardware. Capital stock, $30,000. Directors are: Henry Pearl, William Pearl, H. H. Pearl and Joseph Louis Pearl, of New York City.

New York, N. Y.—The Kwite Right Kooker Company has been incorporated to manufacture stoves. Capital, $20,000. Directors: J. . Adams, of New Orleans; P. L. Tarbox and A. S. Wale, of New York City

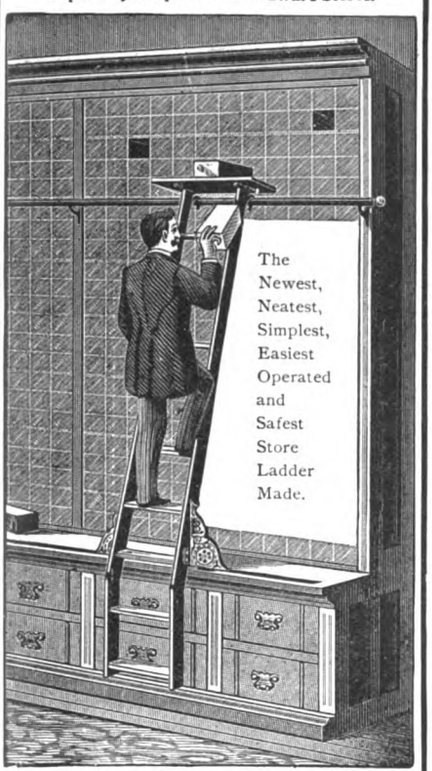
Sayre, Pa.—The Cayuta Mfg. Co. has been incorporated to manufacture tools, gas, oil and electrical appliances from iron, steel, brass and other metals. Capital stock is $75,000. George H. Maurice, of Harrisburg, is one of the directors of the company.

Scottsdale, Pa.—The Black Manufacturing Co. is a new concern, organized for the manufacture of Cutlery, which, when in operation, will employ one hundred men. The plant, it is expected, will be running about the first of January. This company will absorb the LaBelle Cutlery Company, of Allegheny.

Toledo, Ohio.—The Toledo Plier Company has been incorporated and will soon be operated in a building at Jackson and Thirteenth Streets. The incorporators are: F. M. Rakestraw, W. G. Sussman, Lewis W. Rakestraw, Allen De Vilbiss and N. W. Hansen. The concern will manufacture a plier that is the invention of Allen De Vilbiss, and the product will be sold to jobbers in Hardware exclusively. The capital stock of the company is $25,000.

Washington, D. C.—The Ball Bearing Wrench Company has been incorporated with a capital of $30,000. Charles R. Talbert, George W. Coldenstroth and Louis P. Keller, incorporators.

Washington, D. C.—The Columbus Recording Lock Company has been incorporated. Capital stock, $325,000. Incorporators: P. H. Kennedy, M. Grogan and William S. Clinton.



Waverly, Tenn.—J. P. Carven & Co. have formed a partnership with Capt. W. W. Hobbs, and will eerct a suitable building at once for the manufacture of hay presses.

St. John, N. B.—The new plant of the Maritime Nail Works, which replaces the one that some months ago was destroyed by fire, is now completed, and operations have been resumed.

MINCE-PIE TIME COMING

MANY GEMS SELL THEN. ARE YOU READY?

You should put in a full stock of Sargent's Gem Food Choppers because the housekeepers will want them as soon as there is a demand for mince pies. Every season has its calls for the Gem, but within the next few months they will sell fast.

We Will Help You Sell the Gem

By advertising extensively in the publications read by women. By furnishing attractive slips for you to distribute among the housekeepers of your neighborhood so that they will know you sell the Gem. By supplying you with carefully prepared advertisements, electrotyped with your name and address, and ready for use in your local papers. These advertisements will constantly remind women that they need the Gem and that you sell it. By including with the choppers attractive show cards to hang about the store—a further reminder that will be seen by all who visit your store.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, etc.

Catasauqua, Pa.—The Catasauqua Rubber Company will open a factory here within a very short time and will manufacture rubber goods and all kinds of rubber novelties. The new company has been incorporated by James Regnery, of Easton, president; William McDonald, Allentown, vice-president; Hugh C. Crilly, Allentown, secretary and treasurer; J. W. Kenevel, Philadelphia, superintendent, and Frank Jacobs, Allentown, solicitor.

Cleveland, Ohio.—The Cleveland Roller Skate Company has been incorporated. Capital stock, $5,000. Incorporators: Joseph Goodman, L. A. Stone, Louis Fishel and Aaron Hahn.

Milwaukee, Wis.—The A. O. Smith Company, in which Mr. Smith will be president, Charles G. Forster, treasurer, and A. F. Hase, secretary, has been incorporated, and the company's plant, at present known as the Federal Manufacturing Company, and owned by the Pope Manufacturing Company, which succeeded the bicycle trust, will be bought by the company and operated as an independent concern. At present it supplies automobile parts to well-known manufacturers. The capital stock of the company will be $200,000. The plant was established by C. J. Smith and sons a number of years ago, and in 1899 was bought by the trust, A. O. Smith being retained as manager. At present 200 men are employed, but it is expected that 500 will be needed within a short time.

Milwaukee, Wis.—The Merkel Mfg. Co. has been incorporated and will in the future be known as the Merkel Motor Company. Capital stock, $200,000. They are adding a line of Automobiles to their products.

Sharon, Pa.—The Driggs, Seabury Ordnance Co., of Derby, is putting up a new plant for naval equipment. It is expected that the company will be turning out guns by the first of next year. Four buildings are to be erected. Guns of the three and six-pounder class will be turned out at first, but in time larger ones will be made.

St. Louis, Mo.—Morgan & Harding has been incorporated under the firm name of Morgan & Harding Automobile Co., with a capital stock of $10,000.

Toledo, Ohio.—The Toledo Tire Company has been incorporated. Capital stock, $225,000. Incorporators: Florentine M. Rakestraw, William G. Guessman, Lewis W. Rakestraw, Allen De Vellee and Neil W. Hanson.

Changes.

Buffalo, N. Y.—The National Battery Co., which is constantly adding to its facilities for the production of Sperry batteries, has found it necessary to build a large new factory. The space to be built upon is 111 feet on Massachusetts Avenue, adjoining the present factory, and has a depth of 500 feet. A two-story wing, extending north from the main factory, 52 feet wide and 144 feet long, will increase the size of the present forming rooms.

Chicopee Falls, Mass.—The assignee of the Fisk Rubber Co., Alfred N. Mayo, has submitted a plan of reorganization. On account of the excellent business being done and the bright prospects for the future, he is able to offer a very liberal plan, which will no doubt be adopted, as it has been approved by many of the largest creditors. The plan includes the incorporation of a new company with $600,000 capital stock, half preferred, half common. Creditors having claims of less than $100 will be paid in cash in full, and all other creditors will be paid 5 per cent. in cash and the rest in preferred stock of the new company, any fractional part of $100 being paid in cash. Stockholders of the present company are to receive equal value in preferred stock of the new company, besides the same amount of common stock. After all claims of the old company are thus settled the balance of the stock of the new company is to go to Mr. Mayo as compensation for his work as assignee. The preferred stock is to be gradually retired and while outstanding will bear interest at the rate of 6 per cent. per annum.

Cincinnati, Ohio.—After years of experience in manufacturing various parts of automobiles for others, the Schacht Mfg. Co., of 2727-2731 Spring Grove Avenue, decided to take up the manufacture of complete automobiles, and are now on the market with their machine, which has been thoroughly tried out, all parts of which are made in their own factory.

Columbus, Ohio.—The Young Repeating Arms plant, which has been in the hands of the court for several months, is to be dismantled and removed to Massachusetts by its purchasers, the Sears-Roebuck Company. The plant was sold under the hammer, bringing about $8,000.

Elkhart, Ind.—The firm of Geo. E. Lloyd & Company has been dissolved.

Ft. Wayne, Ind.—The bicycle firm of Alderman & Staub, on Barr Street, have dissolved partnership. Arthur Staub will retire and Frank Alderman will continue the business.

Los Angeles, Cal.—The Williams Rubber Co. has been succeeded by the Harrison-Williams Co., with a paid up capital of $25,000. The new officers are: President, H. A. Harrison; vice-president, T. J. Williams; secretary-treasurer, W. G. Williams. The Harrison-Williams Co. claims to be the only concern in this country having molds for every make and size of tire on the market, in addition to heaters, boilers, presses, etc., and at present is the only complete tire repair shop in Southern California, their building having been built especially for their work.

Madison, Me.—James M. Felker has purchased the business formerly operated by the firm of Sawyer & Miller.

New Haven, Conn.—The addition to the Winchester Repeating Arms Co.'s power house on Argyle Street is now under construction. It will be 36x50 feet, of expanded metal and concrete construction, with slate roof. An addition to the gas plant will also be built. It will be 21x36 feet, of brick.

New York, N. Y.—E. J. Willis Co., 8 Park Place, has decided to put in a line of men's and women's automobile clothing, including linen and pongee caps and garments, rubber, cravenette and fur clothing, etc. A catalogue of their line will shortly be issued.

New York, N. Y.—Homan & Schulz Co., who have been conducting two automobile stores, one at 134 Thirty-eighth street and one at 2342 Broadway, have separated, Mr. Homan taking the former and Mr. Schulz the latter. The style, however, is not likely to be changed.

New York, N. Y.—The Tiger Cycle Works, of which H. A. Gliesman is proprietor, has separated its sales and repair departments and removed the former to 563 Seventh Avenue and the latter to 431 on the same avenue; the change will give Mr. Gliesman much needed space.

Toledo, Ohio.—D. W. LeFever, Sons & Co. have moved the machinery for the gun plant to Defiance. The plant has been bought by Toledo parties in connection with the LeFever Company and the concern will manufacture guns of the single trigger and ejector style. The guns will all be high-priced ones and for the best trade. N. Y. Cole, of this city, will be directly interested with D. M. LeFever in the management.

Embarrassments.

Herkimer, N. Y.—The Herkimer Cycle Company has made an assignment for the benefit of creditors. The firm consists of Frank Mallett and Oliver Fortaw, Jr. There are no preferred creditors.

Miscellaneous.

Dubuque, Iowa.—The Hollenbeck Gun Company, of Wheeling, W. Va., is seeking a location and is in communication with officials of Dubuque. Most of the company's output is sold in the Mississippi valley. The company has a capitalization of $88,000 and will increase it by $33,000 when a move is made. It is an old established concern.

Hartford, Conn.—The stockholders of the Hartford Rubber Works Co. held their annual meeting on July 18, and re-elected the officers then serving, which are as follows: President, Charles H. Dale; vice-presidents, William Seward, Jr., J. D. Anderson and Charles A. Hunter; secretary and treasurer, J. W. Gilson. The directors were also re-elected. The branch managers and other representatives also held a general conclave.

London, Eng.—The Defiance Machine Company, of Ohio, will complete the installation of the artillery carriage making machinery at the Woolwich Arsenal. The company secured the contract after the Government Commission had compared the offers of all home manufacturers.

Worcester, Mass.—The J. R. Torrey Razor Company will soon erect an addition to their shop which will be 45 by 90 feet, and four stories, to increase their manufacturing facilities.

309 Broadway, New York

For Sale.

50 new cold weld seamless steel pressure tanks (20 gallons capacity, tested to 200 lbs) each complete with double acting liquid or air pump, valves and pressure gauge; guaranteed to be in perfect condition—never used; cost each $25; will sell the lot $12 each. Address "A. P." HARDWARE.

Wanted.

WANTED—Good salesmen for first-class side line; men familiar with cutlery preferred. Address K., care HARDWARE.

WANTED—A young man as assistant stock clerk in a Hardware store. Address "Axiom," care HARDWARE.

Salesman Wanted.

WANTED—Salesmen of experience and acquaintance with trade and territory, to sell our line of whips either exclusively, or in connection with one other good line of goods. Samples comprise a selection of all "live sellers" from the strongest line in America and can be carried in case weighing thirty pounds. The most attractive and best proposition going for energetic salesmen. Liberal commission and exclusive territory. Address Box No. 327, Westfield, Mass.

WANTED—After January 1st, 1905, a first-class salesman, acquainted with the retail hardware trade in Kansas and Oklahoma. No side lines, must carry our goods exclusively. Established trade and largest manufacturers of their line in the United States. If you have not the requisites and cannot furnish references, do not write. Address Manufacturers, care HARDWARE.

GOOD AGENTS WANTED TO SELL

Our Catalogue is "Our Drummer."

It lists the largest line of general merchandise in the world, and is of special interest to hardware dealers. Its prices cannot be duplicated by any other house. It is free to any hardware merchant. Ask for catalogue CC461. : : : : :

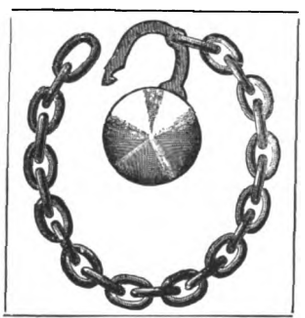
WRITE FOR QUOTATIONS

Mention "Hardware."



Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.

Catalogue and information free.

Address Dept. H,

THE
American Steel Roofing Co.
Middletown, O.

AMES SWORD CO.,

CHICOPEE, MASS.

MANUFACTURERS OF

Patent Perfection Padlocks.

All sizes, ½ in. to 2½ ins. *Send for Catalogue.*

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

OUR GASOLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.
